Free Delivery

We pay for delivery for all bulls and registered heifers throughout the Continental U.S. If you do bring a trailer to haul your own, \$50 will be deducted from the price of each bull or registered heifer. Most of the sale cattle will be delivered from 1-3 weeks after the sale, although we will try to accommodate special needs. Although there occasionally are limitations, in most cases we can deliver the cattle directly to your ranch.

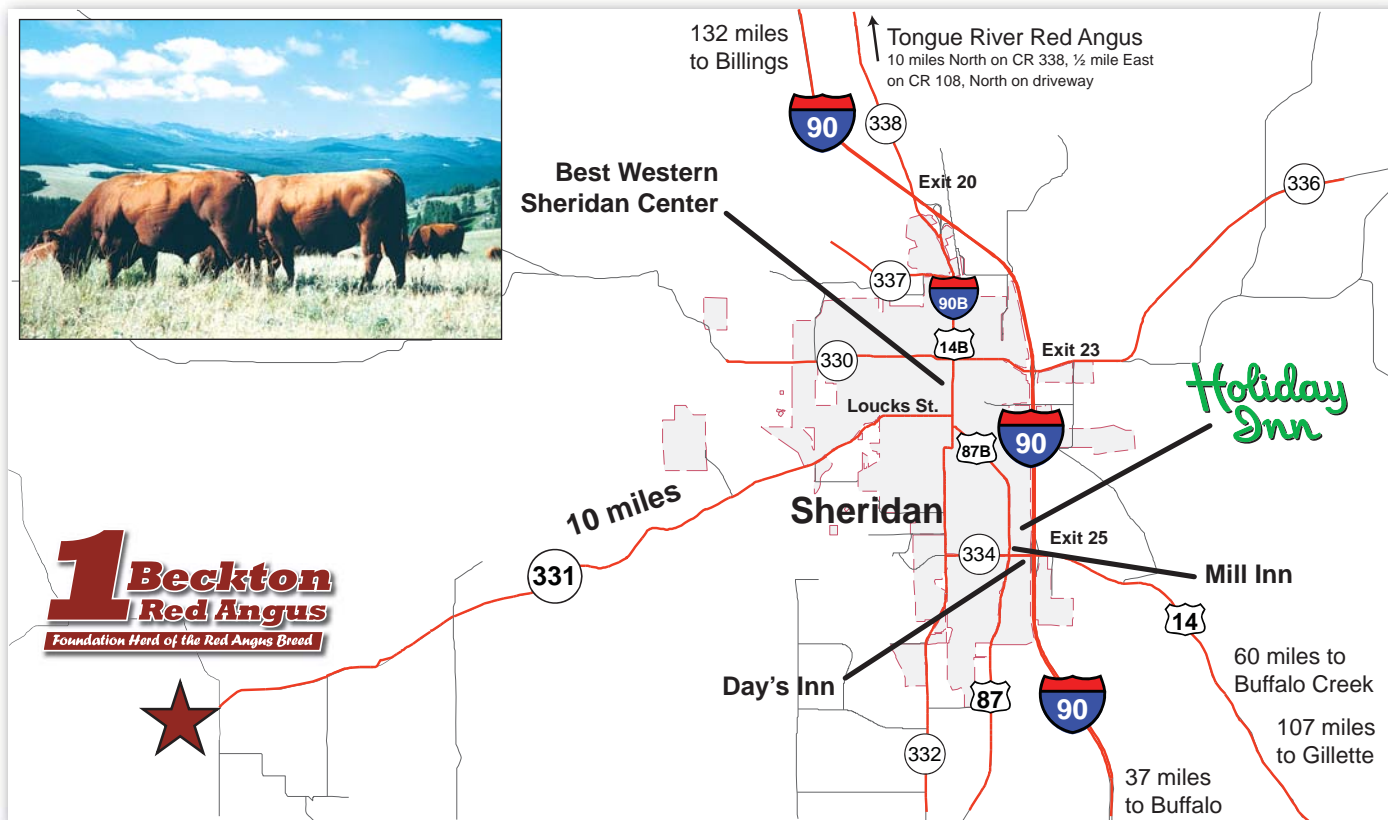

Sight-Unseen Purchase (by mail or phone)

If you are unable to attend the sale, we can help you select the bulls or females to fit your needs. Give us a phone call, letter, fax or e-mail (please refer to the the back cover), and we can make arrangements to handle bidding according to your directions. Bulls are bought at the lowest price, and satisfaction is guaranteed on bulls purchased sight unseen. Many of our repeat customers buy their bulls this way.

To provide us adequate time to assist you, please contact us before noon of the day prior to the sale.

Payment

Payments can be made with cash, check payable to Beckton Stock Farm, or Visa/Mastercard on sale day.

Credit for many of the photographs in the catalog should go to Kim Wolfe (*Record Stockman*), Doug Hogan (*Tri-State*), Brenda Stewart, and Diane Vaneck.

9½ miles West of Sheridan

Wednesday, April 8, 2009

12 o'clock noon

Lunch at 11 am

236 Bulls • 44 Heifers

Selling in catalog order, heifers sell following the bulls

Please join us for a complimentary
Customer Appreciation dinner
Wednesday evening at the Holiday Inn.

Phone: 307.674.6095

Beckton Red Angus is the Red Angus breed's founding herd. Started in 1945, it has since maintained the longest continuous performance testing and improvement program in the industry. When the Red Angus Association of America was formed nine years later, Red Angus adopted performance testing into its By-laws, the first breed to do so. There are no other cattle with this long history of performance-based genetic selection, so that today we believe our cattle do more things better.

Some Facts:

- ▶ **Beckton is the #1 herd for Low Maintenance Energy requirements, with the lowest average Maintenance EPD of any major herd.** Five of the top ten sires in the breed for lowest Maintenance Energy are Beckton sires. The average Beckton bull in this sale is in the top 5% of the entire breed for low Maintenance Energy EPD. **No other set of sale bulls will do a better job cutting your cowherd maintenance requirements.**
- ▶ **Beckton is also the #1 herd for easy calving, with the highest average Calving Ease EPD of any major herd.** Seven of the top ten sires in the breed for low Birth Weight EPD are Beckton sires. The average Beckton bull in this sale is in the top 5% of the breed for calving ease. **No other set of sale bulls will do a better job of giving you more live calves.**
- ▶ **Best of all, our bulls also lead in total birth to market weight growth.** The average Yearling Weight EPD of the sale bulls is +55, and total birth-to-yearling growth is +58, better than the majority of other Red Angus. This is performance you don't get from other low maintenance or calving ease cattle.
- ▶ There is no other sale offering which combines such good growth traits with this low cow maintenance, and high calving ease, and in so many bulls. **This results from 64 years of performance testing and selection.**
- ▶ **Beckton has produced some of the top all-round carcass sires in the Red Angus breed for many years.** Beckton also produced the highest impact, most "in demand" sire in the Red Angus breed today – Beckton Julian B571 – another top carcass sire and the highest Stayability EPD sire in the entire breed.
- ▶ Plus 64 years of selection for the convenience traits – **cowherd fertility – good udders and milk – altitude adaptation – and good dispositions.** All of the sale bulls have been screened for disposition, and those few that were questionable were not included. Along with good dispositions, our high mountain and big range environment has given us cattle with **good feet and legs.**

Additional Sale Information

- ▶ The animals sell in catalog order.
- ▶ All animals are registered with the Red Angus Association of America, and registration certificates will be transferred to the new owners.
- ▶ All bulls selling have passed a rigorous fertility exam that included live semen evaluation, scrotal measurements, and reproductive tract examinations.
- ▶ Beckton has a comprehensive herd-wide health program which includes vaccinations for 7-Way, IBR, BVD, PI3, BRSV, Lepto, and ivermectin. The heifers are also vaccinated for bangs and vibrio.
- ▶ We plan to get semen collected on some of the bulls before the sale. Otherwise, we will work with the buyer to collect after the sale but before delivery.

Dear Friends and Cattlemen,

The Forbes family welcomes you to our 64th annual sale of Red Angus bulls and heifers. Following the sale, you are all cordially invited to a complimentary roast beef dinner at the Holiday Inn.

The cattle did well over a dry summer, and continued doing well all winter at Darr. The health we see in the bulls is better than ever. Perhaps related, the fertility test results were exceptional. Another area we noted at the end of the test was that the bulls were very quiet and easy to handle. We are confident these bulls will go out and do well for their future owners.

This year's sale features three herd sire prospects by Beckton Julian B571. We have heard over and over from people how much they like their Julian daughters, and we see how many Julian herd sires are out working in other herds. His semen hasn't been on the market for several years, and the offering of three herd sire quality sons is a unique opportunity.

While the economy ahead isn't certain, the beef cattle industry has been reducing inventory for a number of years, and is well positioned when the recovery comes. If grain prices and feed costs continue high into the future, the best way to handle these feed costs is with cattle that need less.

The Beckton herd continues to have the lowest overall cow Maintenance Energy EPD's of any major cowherd. And the bulls in our sale will have the lowest overall Maintenance Energy EPD that can be found at any major sale. Almost all of the bulls in this catalog will have Maintenance EPD's under the Red Angus breed average of +4. Selecting bulls with Maintenance EPD's under that number will help you reduce overall operating costs into the future.

Because we have been selecting for moderate size combined with growth for so many years, you will find a higher proportion of bulls and heifers here that are both low in Maintenance and high in growth than you would find at other sales. The high calving ease, carcass quality, and fertility are added benefits.

We invite you to come see our bulls and heifers on the 8th of April. Sale information including free delivery and sight-unseen purchasing is on the inside front cover of the catalog. If we can help you in any other way, just let us know. We hope to see you in April.

Sincerely,

Shelley, Stephen, Trish, Tallie, and Cam

APRIL: SPRING BULL SALE FALL: RED ANGUS FEMALES
RED ANGUS BREEDING STOCK AVAILABLE YEAR ROUND

The Beckton Program

Cow Size

The goal for Beckton's program has always been to develop breeding seedstock which offer increased levels of performance for the commercial cattleman. Increased performance does not mean maximizing weight and size, which have already reached the upper limit of economic value for the packer and consumer. It does, however, mean increasing performance related to calving percentage and weaning percentage; and increasing performance related to cow maintenance requirements and "pounds of calf per acre" efficiency.

Size Matters

Beckton cattle are already big enough for the consumer and the packer. Using yearling weight EPD as the best available indicator of market size, the average for our sale bulls is +58. The Red Angus breed average for 2008-born animals is +56, so on market size our cattle are directly comparable to industry standard. They are comparable for weaning weight EPD also, so Beckton cattle offer weaning and yearling performance very similar to today's mainstream Red Angus.

The big difference between Beckton's program and others is that we select for additional weaning and yearling weight, but with the restriction that we have maintained about the same cow size as 30 years ago. In contrast, the industry has allowed cow size to increase at the same rate as calf size. Cow size is the largest factor determining maintenance requirements. Our goal over the past 30 years has been to increase efficiency, not size. No other seedstock breeding program has had such a goal, or maintained it for so long.

Beckton Cow Weight Average (lb.)

Year	1978	1982	1986	1990	1994	1998	2002	2006	2008
Wt.	1,126	1,126	1,064	1,115	1,067	1,125	1,104	1,093	1,107

(mature lactating cows taken at weaning)

Cow weights vary from year to year depending on body condition or other short term factors. But overall our cow size has stayed fairly constant over time.

The Industry Problem

As shown on the graph on the next page, industry-wide cow size has increased by more than 27% over this same period. But look at the industry-wide trend in feed use per cow over the same period, shown by the use of hay:

Industry Hay Use (tons/animal unit)

Year	1978	1982	1986	1990	1994	1998	2002	2006
Hay Usg.	1.43	1.62	1.91	2.00	1.94	1.99	2.08	2.05
Pct.	100%	113	134	140	136	140	146	143

(Src.: USDA Econ. Research Service, 2006 is newest available data)

Industry-wide, production per cow is up about 22%, but hay consumption per cow has risen over 50%.

Why does hay use increase at a faster rate than cow size or production per cow? Hay and grain are supplements to the cow's main diet, which is grass, and grass supply is relatively fixed by environment. Each increase in cow feed requirement must be met entirely by supplements, or by a combination of supplement and reduced stocking rate. A small increase in cow feed requirement leads to a reduction in stocking rate or a large increase in higher-cost, supplemental feed needs.

If any gains have been achieved in the feedlot sector due to increased animal growth, they have been overwhelmed by increased cost of production in the cow-calf sector.

Randy Zier

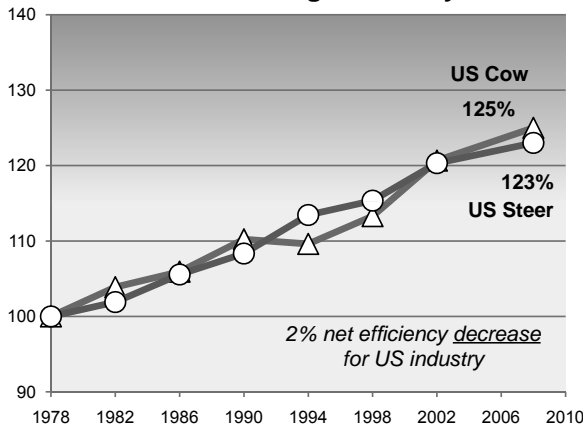

Mick McClure

Alan Sanders

Efficiency

30 Years of Change: Industry-Wide

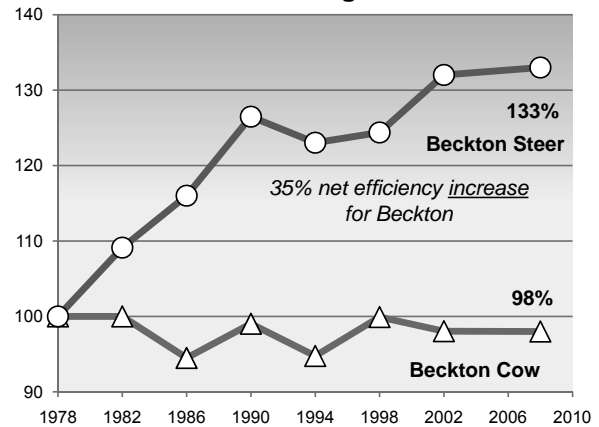

The graph at left shows how, for the U.S. cattle industry overall, the increase in average calf weights, as measured by steer slaughter weights, has been directly matched by an increase in average cow weights. (Percentages are based on USDA slaughter weight data for steers and cows respectively, using 1978 as a base year. Data for heifers slaughtered shows an identical trend.) Over 25 years, there has been minimal change in overall cowherd efficiency.

This graph shows the failure of cross-breeding and composite breeding to do little more than simply increase general cattle size. In the promotion of composites, the impact of retained heterosis on mature weight is too often ignored. Crossbreeding and composites are sold as a free lunch, but they aren't necessarily free after all.

We have accomplished this by selecting for growth, restricting birth weight and cow size creep, and multiplying each incremental change rapidly throughout our entire cowherd and all of our bloodlines. Usually this has meant working within our own bloodlines rather than introducing out-crosses, because the outside genetics for the direction we wanted to go haven't been available. The overall key to success is simply that we have been making small progress in multiple traits, but doing it consistently over a very long period of time.

30 Years of Change: Beckton

The graph at right shows Beckton cowherd data over the same time period.

1. Beckton cow size has shown negligible change over the past 25 years, while the industry has experienced a substantial increase in cow size.
2. Even without increasing cow size, we have raised the rate of early growth in Beckton cattle, using intense genetic selection and generation turnover, and by more than the rest of the industry.
3. The net change in efficiency as measured simply by "calf weight divided by cow weight", is significantly higher with Beckton's genetic program, compared to mainstream cross-breeding based on retained heterosis.

These eight combine for 128 years at Beckton

Additional Facts about the Beckton Program

- Birth weight**
- ▶ Every sire entering our own program is used first on our own heifers, then on our cows.
 - ▶ We have never used high birth weight sires in any part of our program, so big birth weights are rare.
 - ▶ We get the pay weight, but with lower birth weights and greater calving ease.
 - ▶ Full production from heifers. We use the same bulls on heifers and cows.

- Growth**
- ▶ Weaning efficiency, and rate of gain to slaughter weight second to none.
 - ▶ Growth traits must be consistent with maintaining maternal qualities.
 - ▶ Beckton cattle are ideally sized for today's packer demand.

- Hardiness**
- ▶ Every cow in the herd has spent part of her life in the Big Horn Mountain summer range, at elevations from 7,000 to 10,500 feet.
 - ▶ In 2001 we PAP tested all of our herd sires. The herd average PAP score was 32.5 at 4000', equivalent to a herd average PAP of 39 at 8000' (excellent scores).
 - ▶ By the time she is 5, our average cow will have been trailed over 80 miles, above and beyond normal pasture rotation.

- Efficiency**
- ▶ The typical dam of our bulls weans over 50% of her body weight in 205 days, under range conditions, with no creep-feeding.
 - ▶ The average dam produces over 100% of her own body weight in a year.
 - ▶ The average mature cow (age 5+) weighs about 1100-1125 pounds.

- Fertility**
- ▶ Every bull in our program is used in natural service, with 30-50 heifers/cows.
 - ▶ Every cow in our program must cycle naturally and breed early under range conditions.

- Value**
- ▶ Beckton Red Angus produce more growth without high birth weights.
 - ▶ They are the one-bull solution that can be used on both heifers and cows.
 - ▶ Carcass quality is an extra benefit.

- Integrity**
- ▶ Beckton has been genetically improving Red Angus since 1945, a 20-50 year lead time over other producers.
 - ▶ It is a complete, genetically sound breeding program, which demands whole-herd performance.

Management

One Bull – the Simple Solution is the Best Solution

Many cattlemen use Beckton bulls for their heifers because of their low birth weights and high calving ease. Our bulls are even better when used on cows, because replacement heifers tend to be selected from calves out of older cows. **Keeping replacement heifers sired by Beckton bulls is the quickest way to limit cow size creep and to moderate cow size for the future.** In our own program we use the same bulls on both heifers and cows. Every bull is used his first year with heifers to evaluate calving ease, and used in future years with older cows. We get calving ease, growth, and moderate-sized replacements, all with the same bull.

Quietness and Ease of Handling

The necessity of record keeping means that our cattle will be handled much more than commercial cows. **This benefits our seedstock customers because our cattle will be quieter and easier to handle.** Good disposition is one of our most valued traits.

Removing the Bull from Bull Testing

Our bulls are managed to give our customers many years of productive service. We have been testing breeding bulls for 45+ years, longer than almost anyone. Our own breeding is based on natural service, not AI, so we see how bulls work in the pasture. **We use these bulls with our own cows, on every kind of terrain and high in the Big Horn Mountains.** For the first twenty years our bulls were raised and tested at home here in Wyoming. They received some grain, but otherwise grass pasture and dry hay – a forage dominated diet. In 1979 we moved our test to the Kugler's in Nebraska, where the bulls got a ration including silage, corn and protein.

It was 29 years ago that we started bringing home from Kuglers, and used them with our own cows. **The improvement in libido and breeding performance in these bulls was dramatic.** While it is possible to feed bulls improperly under any program, we would strongly question those who promote the notion of any advantage to “forage-raised” bulls.

We have used over 400 of these bulls in our own herd, and have never had a bull fall out of our program prematurely due to his feeding or testing management. Beckton Julian B571, Lancer F442, and all of our other great sires were fed and tested at the Kugler facility. We think any notion that forage raised bulls will somehow hold up better or last longer, is a myth. **This winter we are retiring Beckton Champ H024, who has spent the**

last few years doing clean up duty on 400 cows on 10,000 acres high in the Big Horns, going on 10 years of age!!

Selection for Industry Requirements

In order to make selection decisions appropriate to the commercial beef industry, seedstock cattle need to be managed and measured under conditions which will approximate the commercial industry. **Our cows are run strictly on grass, with hay only if weather conditions require it, because that is how the commercial industry runs cows.** However, almost all commercial calves go into feedlots before slaughter, so feedlot performance and efficiency is an important trait for calves. **Simply put, a producer needs to know how his cows perform on grass, and how his calves perform with feed.**

Our bulls are run on a performance test designed to provide the fairest basis of comparison among them, and this requires a compromise. Our bulls receive a “growing” ration high in roughage and protein and not as high in energy as a steer would receive. **We want to get a good measure of gainability with which to compare bulls, but we don't want the bulls fat.**

Craig Uden, Mitch Ziebell of Darr, NE

In the fall of 2005, Lane Kugler retired and sold his bull testing facility to a neighboring operation - Craig Uden with Darr Feeders. **The name change is somewhat misleading, because the bulls are still in the same pens they have always been in.**

Unlike the Kugler's, Craig actually runs a complete operation vertically integrated from commercial cow-calf production all the way to the packer door. Bull testing is a natural fit. Craig Uden started at Darr in 1984, and has served on numerous committees and organizations in Nebraska. Mitch Ziebell has joined him and has taken over responsibility for the daily management of our bulls at Darr. **We have been very impressed with what conscientious care Mitch oversees all aspects of the bull management.**

Using New Selection Tools

Maintenance EPD

This EPD predicts the relative feed energy requirement for maintenance, for cows produced by a sire or female. A bull with an ME of -3 (minus 3) is expected to sire replacement daughters which will need 10 fewer mcals of energy per month than a bull with an ME of +7.

We believe this is an important EPD because feed costs, both direct and indirect through ranch overhead, make up by far the largest proportion of operating costs. It can have much more direct impact on ranch profitability than Marbling or Ribeye EPD for example.

The Beckton herd is the breed's top herd for low maintenance energy requirements, with the lowest average herd ME of any major herd, based on all sires listed on National Sire Evaluation. **The average Beckton cow is in the top 4% of the entire breed for lowest Maintenance Energy requirement.**

Calving Ease

The Red Angus Calving Ease EPD was introduced in 2003, and is a more direct measure of calving ease than birth weight alone. Calving Ease is defined as follows: "The expected differences of calving ease measured as the probability difference (between sires) of unassisted calvings among offspring." For Calving Ease EPD, the higher number is better.

There are two Calving Ease EPDs – "Direct", a predictor of an animal's own offspring; and "Maternal", a predictor of a daughter's calving ease. Unless stated otherwise, we publish the Calving Ease Direct because most of our customers' primary concern is selecting bulls for use on first calf heifers.

Beckton's average Calving Ease EPD is +13, seven points higher than the Red Angus breed average of 6, due to our long history of selection for moderate birth weights. **The average Beckton bull is in the top 4% of the entire breed for highest Calving Ease.**

Cow Efficiency

We present two indicators of efficiency. The first is Weaning Percent, a simple percentage of calf 205 day weight divided by the dam's actual weight at weaning. The second is PRI Cow Efficiency. This also measures calf weaning weight, but relative to the cow's metabolic weight, and is expressed as an index above or below 100.

These efficiency measures are best used as indicators of where an animal is relative to others, rather than directly for selection. For example, if we see an animal with a low efficiency, we would look at the actual calf and cow weights to decide if the calf is too small, or the cow too big for the environment. That in turn will suggest corrective actions. **In general, select for the traits you need to change to make cattle more efficient, and efficiency will be the result.**

After 64 years of this performance selection, we believe our cattle are the most efficient in the industry.

Dam Information

A significant difference with our catalog is the greater amount of information about the dams we provide. Weaning percent and Cow Efficiency are explained above. In addition and next to each sale animal, we give the dam's age when that calf was born, and the dam's actual weight when the calf was weaned last fall. We also provide her progeny averages – the average birth weight, weaning ratio, and yearling ratio, of her calves.

Sal Forbes inducted into portrait gallery

Sarah "Sal" Forbes of Sheridan was honored as the first woman inducted into the Saddle and Sirloin Club's portrait gallery at a November 16 ceremony. The presentation was at the Executive West Hotel during the North American International Livestock Exposition on November 8-21 in Louisville, Kentucky.

Forbes was recognized as a "significant, historical, and influential leader in the livestock industry," according to the Saddle and Sirloin Club.

Each year an industry leader is selected by peers to be inducted into the portrait collection.

About 100 letters were received on behalf of Forbes for induction into the gallery, according to Forbes.

"Everybody did a lot of work to make it happen," said Forbes.

The Forbes family owns Beckton Stock Farm in Sheridan, home of the foundation Red Angus breed.

"Her (Forbes) accomplishments in beef production, livestock organization leadership and general influence on the livestock industry are numerous," according to Dorothy Spencer of NAILE.

As for being the first woman inductee, Forbes said it was very exciting.

"They got brave enough to try a woman," she said of the gallery that features more than 340 portraits.

Overall, Forbes said the honor was "humbling."

"A lot of people wrote for me - a great many people," she said.

The program included a presentation of Forbes' biography, her influence on

youth, the impact of the Beckton herd on the industry, and Forbes as a role model, among other topics.

Portrait artist Richard Halstead spent a week with Forbes in Sheridan as he worked on the portrait.

The portrait was hung "with a time-honored ceremony reflecting the tradition of artistic quality and great sentimental and historical value," according to the Saddle and Sirloin Club.

The Saddle and Sirloin Club's portrait gallery was established in 1903. Portraits hang in the gallery at the exposition center, the largest gallery of portraits devoted to a single industry, according to the Saddle and Sirloin Club.

T826 was a feature herd sire prospect in last year's catalog. He attracted a lot of interest, but we pulled him before the sale due to a question of health. It turns out his health is just fine. We have frozen semen on him over the past year, but he has not been with cows. He had the largest Rib-eye measured -- 16.5 -- of any bull on test. For those who want an outstanding beef package and gaining machine with a moderate frame and very low Maintenance EPD, this is the bull. **Selling ½ Interest & Full Possession.**

This is one of Mitch Ziebell's top picks for phenotype. His grandsire is Beckton Julian 7526G, sire of Julian B571. Great bulls come from great cows, and Julian's dam is young, but her first three calves ratioed 119, 110, and 117 at weaning, 110, 110, and 112 at yearling. Lot 3 epitomizes our program that combines growth 12 points higher than breed average with high Calving Ease and low Maintenance EPDs, both in the top 5% of the breed. **Selling ½ Interest & Full Possession.**

We think this is an outstanding offering of bulls and heifers, combining calving ease, fertility, rapid early growth, carcass quality, and breed-leading genetics for reducing cowherd feed needs.

You will find a bigger percentage of the bulls in this sale with genetics for reducing maintenance energy requirements, than in any other major Red Angus sale. And you will find a larger number of bulls that combine both low maintenance energy needs, together with above average growth. The average Yearling Weight EPD of the sale bulls is +58, more than the Red Angus breed average. And notice the incredible spreads combining high growth with low maintenance in bulls such as Lots 1, 2, 3, 4, 5 and many others all through the catalog.

This year Mitch Ziebell, who manages the bulls on test, gave us his appraisal of phenotype, and we have noted some of his top picks.

Lot 4 about matches Lot 3 for performance, with an even lower Maintenance Energy EPD of -5 (top 1% of the breed). Only he comes from a great old dam rather than a great young one. Lana is a cow line you see a lot in these top bulls, and E136 is calving this spring for us at 14 years of age, having never missed a calf and with an average calving date of March 18. Justice is another of Mitch's top picks for phenotypic excellence. **Selling ½ Interest & Full Possession.**

Beckton Julian GG B571, Ref. J-1
Sire of Lots 5, 6, and 7.

Julian B571 has probably produced as many great herd sires for breeders as any sire existing. His semen hasn't been on the market for many years, and sons are very rare. If you haven't had a B571, this is the opportunity. U603 leads off three top B571 herd sire prospects. Calving ease, growth, milk, carcass and low maintenance EPD's are excellent. His ultrasound ratios are excellent also -- 102 for rib-eye and 117 for marbling. **Selling ½ Interest & Full Possession.**

Like his full brother and flushmate, Lot 7 is a rare full brother to TR Julian LT142. The high Stayability EPD of these Julians attests to their high fertility and desirable breeding traits. Calving ease is also among the breed's highest, and growth and milk are excellent. **Selling ½ Interest & Full Possession.**

Lots 6 and 7 are rare full brothers of TR Julian LT142. Full sisters to both bulls recently sold at the Bet on Red and NILE sales at very respectable prices. They are great ambassadors for the classic Julian traits of calving ease, growth, low maintenance, high heifer pregnancy, stayability, and carcass. **Selling ½ Interest & Full Possession.**

A son of TR Julian LT142 and a very productive Lydia dam (MPPA 104.3), Lot 2 has all the calving ease and carcass that one can expect with such high performance numbers. He gained 4.6 lbs. per day on test and ratioed 115 at weaning and 114 at yearling. He scores in the top 15th percentile for eight of the thirteen measured EPD's. **Selling ½ Interest & Full Possession.**

Bulls with high birth weights tend to be outliers in our program, but Lot 16 and the two bulls to follow are very unusual in that they combine breed-leading growth with low maintenance requirements. For the cattleman who doesn't need the lowest calving ease, but wants to lower cowherd maintenance costs while building growth, Lot 16, 17, and 18 are bulls to latch on to. **Selling ½ Interest & Full Possession.**

The Yearling Heifers

The Beckton cowherd is a complete package of genetics for today's industry – moderately sized, efficient producers. They combine calving ease, growth, and desirable carcass traits. They are feminine, maternal and quiet, with nice udders. All of our heifer calves trailed up with their mothers into the Bighorn Mountains to spend their first summer. They have learned the meaning of mothering ability. Most impressively, heifers like these produce the bulls for our sale.

We have included heifers from the very top of our replacements. They also include a very nice set

of heifers from Tongue River Red Angus that are predominantly Beckton breeding. All have received a vaccination for leptovibrio this spring, but have not had MGA or other additives to suppress heat and influence gains. These heifers were born mostly in February and March. They are cycling and ready to breed.

We can keep any sale heifers and breed them in natural service to the same herd sires we use with our own heifers. There will be a charge of \$250 per heifer plus delivery at cost in the fall. Visit with Cam.

Special Offer

Beckton is offering 2 straws of semen from any Beckton sire (for which we have semen), to go free of charge with each Beckton heifer purchased. If the sire selected is Beckton Julian B571, the offer is only for 1 straw, and is available only on Beckton 1-A heifers purchased. The buyer will only be responsible for shipping costs from Billings (unless the heifer is being left for breeding at Beckton). The buyer may use the semen on any animals he/she chooses.

Tongue River is likewise offering 2 straws of semen from any Tongue River sire available, for each Tongue River heifer purchased.

We lead off with an own daughter of Julian B571, from a top young cow. The Tamara cow line has produced top herd sire prospects in 2 of our last 3 sales. This wonderful heifer combines femininity with a very low Maintenance EPD, plenty of growth, and excellent carcass EPD's.

A top double bred JULIAN daughter, UT875 is in the top 20% of the breed for CE, BW, ME, HPG, CEM, STAY, and is strongly positive for MARB and REA. It doesn't get much better than that.

A feminine heifer with balanced EPD's and high Milk, and very moderate size. Like so many of the heifers we chose for the sale, she is out of an above-average dam.

These last few heifers in the sale are out of very young dams, but take a look at this dam's performance, and why we think U251 has excellent potential.

The sale concludes with an angel, or at least a very feminine Angel heifer and another own daughter of Beckton Nebula M045. You will hear much more about Nebula in the future, because ABS is taking him under lease.

Predicting Profit...

EPDs (Expected Progeny Differences) are the most powerful selection tool the beef industry has ever had.

The use of EPDs has converted selecting range bulls from an art form to a science, better preparing cow/calf producers to make genetic decisions which may ultimately improve their profitability.

Better Selection Tools Make Better Bulls

Red Angus remains the only major beef breed with mandatory Total Herd Reporting (THR), which requires the annual production of each cow and the performance of every calf raised through weaning to be reported. Red Angus EPDs are calculated from complete contemporary group data - not just the data from the calves good enough to register.

Completely Described Beef Production: Reproduction • Growth Carcass • Maintenance

Profit starts at Reproduction!

Research has shown that reproduction has four to ten times the economic impact of carcass traits. Yet, Red Angus is the only breed that completely describes cow herd reproduction from birth through profitable lifespan. Red Angus reproductive EPDs are expressed as percent probability, meaning the higher the EPD, the more likely the desired observation.

Profitable reproduction can be boiled down to success in these four Economically Relevant Traits:

Calving Ease Direct (CED): The expected progeny difference of calves being born unassisted from two year-old heifers. The Red Angus CED model accounts for contemporary group birth weight differences and calving ease scores.

Heifer Pregnancy (HPG): The expected progeny difference of heifers conceiving to calve at two years of age.

Calving Ease Maternal (CEM): The expected progeny difference of a given animal's daughters calving unassisted at two years of age.

Stayability (STAY): The expected progeny difference of a bull's daughters remaining in the herd until at least six years of age. Females that don't stay in the herd that long are losing money, and they also contribute to a higher rate of replacement females that the rancher can't cash crop.

Cows Eat Money! That's why Red Angus published the Mature Cow Maintenance Energy EPD (ME EPD), becoming the first beef breed to evaluate the expense side of the ranchers' profit equation. Here are the facts:

- ME predicts differences in maintenance energy requirements of mature daughters of a bull.
- Maintenance energy requirements are directly related to feed cost - often producers' largest single expense.
- The lower the ME EPD, the less feed daughters require to maintain body condition.
- ME can be used to ensure environmental fit, and to estimate additional feed required by increased growth & milk.

Growth & Carcass Traits!

Red Angus publishes genetic predictions for birth weight, weaning weight, yearling weight, milk, total maternal, marbling score, rib eye area, and 12th rib fat thickness. Red Angus utilizes real time ultrasound data in conjunction with actual carcass data in the calculation of marbling and rib eye area EPDs. Genetic predictions for each of these revenue traits are more reliable because they are built with Total Herd Reporting.

Red Angus Bulls Described	Trait	Expressed in (units)	2/3 of yearling Red Angus bulls fit in this EPD range		
Yearling Red Angus Bulls	CED	% Probability	6	2	10
Yearling Red Angus Bulls	BW	Pounds	0.3	2.5	-1.9
Yearling Red Angus Bulls	WW	Pounds	32	24	40
Yearling Red Angus Bulls	YW	Pounds	56	43	69

Yearling Red Angus Bulls	TM	Pounds	32	25	39
Active Red Angus Bulls	ME	Mcal/Month	4	9	-1
Active Red Angus Bulls	HPG	% Probability	9	6	12
Yearling Red Angus Bulls	CEM	% Probability	3	0	6
Yearling Red Angus Bulls	STAY	% Probability	9	6	12
Yearling Red Angus Bulls	MARB	Marbling Score	0.07	-0.04	0.18
Yearling Red Angus Bulls	REA	Square Inches	0.07	-0.10	0.24
Yearling Red Angus Bulls	BF	Inches	0.00	0.01	-0.01

To receive a **FREE 8-page "Rancher's Guide to EPDs"** or a **Red Angus Sire Summary**, contact this breeder or the **Red Angus Association of America**.

Building Better Beef...

Red Angus

(940) 387-3502 • RedAngus.org

Abbreviations and Explanation of Terms

Tattoo – The animal's ear tattoos.

Cat – An animal's category under the Red Angus recordation system.

- ▶ **1-A** – Purebred 100% Red Angus with no disqualifying characteristics.
- ▶ **1-B** – 87% to 99% Red Angus with no disqualifying characteristics.
- ▶ **2** – 1-A and 1-B animals that are disqualified from those categories for white in front of the navel, or other disqualifying characteristics.

EPD – Expected Progeny Difference. The expected difference in performance of an animal's progeny when those progeny are compared to progeny of an animal with an EPD of zero for the trait in question. EPD values are relative. They are the only statistically valid way to compare the expected progeny performance of different animals.

Acc – Accuracy measures the reliability of the EPD. It reflects the amount and distribution of information contributing to an EPD, and can range from a low of .0 to a high of 1.0. Non-parent EPDs have extremely low numerical accuracy.

Possible Change – An estimate of the amount of change (in trait units) that can be expected for an animal's EPDs based on its level of accuracy. An animal's true EPD will lie within one possible change unit of the stated value two-thirds of the time.

List of EPDs

BW – The birth weight EPD is measured in pounds of weight difference at birth.

WW – The weaning weight EPD is measured in pounds of weight difference at a 205 day weaning age.

YW – The yearling weight EPD is measured in pounds of weight difference at 365 days of age.

Milk – The milk EPD is the weight difference at 205 days which can be attributed to the milk production and female characteristics of the daughters of the animal.

Mat – The total maternal EPD is the total weight difference at 205 days which can be attributed to the dam of an animal alone.

CEd – The calving ease direct EPD is the probability that an animal's calves will calve unassisted to a two-year old dam.

CEm – The maternal calving ease EPD is the probability that an animal's daughters will calve unassisted as two-year olds.

ST – The stayability EPD is the probability that, after an animal's daughters enter the cowherd, they will remain productive until at least six years old.

Dam's Age – The dam's age at the time of calving.

Dam's Wt – The dam's weight if taken at weaning time.

Progeny Average – The average actual birth weight, weaning ratio and yearling ratio for all of the dam's progeny, excluding ETs and twins.

BW – The animal's actual birth weight.

AWW – Adjusted Weaning Weight. Weaning weight adjusted to 205 days and corrected for age of dam.

ADG – Average Daily Gain of the bull while on the test period from October to February.

AYW – Adjusted Yearling Weight. Animal's yearling weight adjusted to 365 days.

Fr – A measure of hip height adjusted for age and age of dam and converted to an alternative scale to provide meaningful comparisons within the animals in the sale.

Scr – A bull's Scrotal Measurement in centimeters adjusted to 365 days of age.

WR – Weaning Ratio. The ratio of an animal's AWW to the others in its weaning contemporary group within the same herd (x 100).

YR – Yearling Ratio. The ratio of an animal's AYW to the others in its yearling contemporary group within the same herd (x 100).

PRI Cow Efficiency – A measure of how efficient the dam/calf pair is compared to the long-standing PRI base-point of 100.

HPG – The heifer pregnancy EPD measures the percent probability that an animal's daughters will calve, as a two year old.

ME – The maintenance energy requirement EPD measure & degree is the difference in megacalories per month that the progeny of the animal will require to sustain itself alone.

Marb – The marbling EPD is the difference in marbling score in the progeny of the animal. Marbling score ranges from 2 to 10 and is the basis for USDA quality grading. A difference of 1.00 is roughly equivalent to one-third of a quality grade (Ch vs. Chi-). It is the most important part of the quality grade determination for a beef carcass.

REA – The rib-eye EPD is the difference in square inches in the size of the longissimus muscle (the ribeye muscle, as measured at the 12/13 rib) of an animal's progeny. It is a component in the calculation of carcass cutability or yield grade or percent retail beef.

Bfat – The backfat EPD is the difference in inches in exterior fat thickness in the progeny of the animal. In carcasses, it is measured at the 12/13 rib for ultrasound measurements. It is the most important component in the determination of cutability or yield grade or percent retail beef. It also represents fat which may need to be trimmed off.

Sale Terms and Conditions

Except for those stated in the terms and conditions below, there are no warranties, either expressed or implied, as to the merchantability or fitness for a particular purpose with respect to the cattle being sold at this auction. The warranties and guarantees set forth in the "Terms and Conditions" are in lieu of all other warranties, either expressed or implied, and the remedies provided therein shall be the sole and exclusive remedy for the Buyer, or any party claiming through Buyer, for any breach of warranty or guarantee therein provided, and all other obligations or liabilities.

The information in the catalog is believed to be accurate, and the information seller believes to be most representative. It is the nature of seller's business that the seller engages in a continual process of collecting new data and information. Therefore, any information presented at the time of sale is always subject to revision, correction or update.

I. BIDDING

The Auctioneer in charge will settle any disputes as to bids, and his decision on such matters shall be final.

II. TERMS

Terms of sale are cash or personal check unless satisfactory credit arrangements have been made with vendor prior to sale.

III. PURCHASER'S RISK

Each animal becomes the risk of the purchaser as soon as sold, but it shall be the obligation of the Seller to see that animals are fed and cared for free of charge to purchaser, until loaded for shipment or until the expiration of 48 hours after the sale, whichever occurs sooner.

IV. DELIVERY

For any animals for which delivery or 'free delivery' is offered, the following terms shall apply. Each animal becomes the risk of the purchaser as soon as sold, and through the time of delivery. The seller will arrange transportation and delivery schedules, and may combine animals from one or more purchasers for convenience and to reduce costs. If 'free delivery' is offered, seller will pay the cost of transportation, but assumes no other liability. Once the purchaser has been notified of the date and approximate time of delivery (morning, afternoon, evening, etc.), it is the responsibility of the purchaser to arrange adequate and agreeable location and facilities for unloading each animal. When unloaded at the agreed upon location, all care and management of the animal is the responsibility of the purchaser.

V. CERTIFICATE OF REGISTRY

A transferred certificate of registry will be furnished to the purchaser for each animal.

VI. HEALTH

All animals are eligible for interstate shipment, except as otherwise announced. Interstate health papers will be furnished for each animal requiring T.B. and Bang's tests in accordance with Federal Regulations.

VII. A.I. NON-OWNER BULL PERMITS

A.I./Non-owner Bull Permits shall be furnished by the Seller, at no cost to the Buyer, for all females bred artificially or naturally to bulls not owned by the Seller.

VIII. ANNOUNCEMENTS

Any changes from information of any kind in this catalog will be announced from the auction box and such announcements shall take precedence.

IX. BREEDING GUARANTEE

All animals are sold as guaranteed breeders. Each bull has been officially fertility tested as "Satisfactory Breeder" prior to the sale. However, seller cannot guarantee against physical injury or illness following the sale. But if within 8 months following the sale, the buyer has evidence that the animal is not a breeder, the buyer may obtain a statement signed by a licensed veterinarian to that effect, such statement also indicating that there has been no injury or illness to the animal following the sale, and return the bull to the farm of the seller for adjustment. If the seller cannot then prove the animal to be a breeder, an adjustment will be made by the seller, either by substituting an animal of equal value, or by the refund of the full purchase price. Such adjustment shall be considered full settlement and satisfaction of all claims. No guarantees apply to animals which are shown following the sale.

Any female that has had a calf prior to the date of sale shall be considered a breeder without further guarantee. Any female that has not had a calf prior to the sale, and which fails to conceive after having been exposed to a bull of demonstrated fertility for at least 60 days, may be returned to the seller at the buyer's expense for a full refund of the purchase price. Such refund shall be considered full adjustment and no further adjustment or compensation shall be due. All pedigree and breeding information represents the best estimate at the time it is collected, but is subject to revision or correction in the future.

X. GENETIC DEFECT AND PARENTAGE GUARANTEE

For complete rules and regulations in regard to genetic defects or parentage guarantee contact the RAAA. Ask for section XI - in the Sales and Terms Recommended policy.

XI. RETAINED INTEREST AND SEMEN RIGHTS:

Buyer receives full possession and salvage value of all bulls in the sale, unless stated otherwise in the catalog or during the auction. On specific animals designated in the catalog or from the auction block, Seller is retaining an undivided 1/2 interest or other interest as stated. We reserve the right to collect and market semen on these bulls. Collection would be during the off season, at the buyer's convenience, and at seller's expense. The buyer has the option of obtaining semen at the same time, at cost, provided we are notified ahead of collection. If the buyer collects the bull, we would like to be notified so we may obtain semen if wanted.

On all other bulls in the Sale, except those so designated, the buyer has full possession, and shall have the sole privilege to determine if the bull is to have semen collected at any time in the future. On such bulls which are collected in the future, and from which semen is advertised or marketed commercially, seller retains a 1/3 royalty interest on any semen which is sold; however, any decision to collect or sell semen is solely the right of the buyer.

XII. RIGHTS AND OBLIGATIONS

A. The above terms and conditions of sale shall constitute a contract between the Buyer and Seller of each animal and shall be equally binding upon both. Each sale or resale of an animal constitutes a separate transaction.

B. Neither the sale manager, the owner, nor any other person connected with the management of the sale, assumes any liability, legal or otherwise.

The Red Angus Association is developing a DNA marker test for osteopetrosis, which is expected soon. Buffalo Creek Romeo L081 has been identified as a carrier. We have not used Romeo significantly, but he can appear back in the pedigree on a few animals. If you purchase an animal descended from Romeo, and once this genetic test is developed, you may have him tested at our expense. The probability of a descendent being a carrier is very small, if such an animal should be a carrier, we will take the animal back and give you a full refund of your purchase price.

EPD Accuracies and Possible Change

EPDs are predictions, not true values, and we can therefore expect that EPDs will change from sire evaluation, as more information (i.e. progeny data) is included. A possible change value is an estimate of the amount of change (in trait units) that can be expected for a given EPD.

Technically, there is a 68% chance that the real genetic value (an EPD with a accuracy of 1.0) for any trait lies between its EPD plus its possible change value and its EPD minus its possible change value. For example, if a sire has a weaning EPD of +25 lb. and a possible change value of 10 lb., we can expect the true genetic value to be between +15 lb. (25 - 10) and +35 lb. (25 + 10) 68% of the time. We should not be surprised if his EPD in next year's evaluation is as high as +35 or as low as +15. If next year's EPD should happen to be slightly outside of this

range, keep in mind there is nearly a one-in-three chance of that happening; however, significantly larger deviations can occur.

Possible change is simply another way of expressing accuracy of an EPD. High accuracy sires will have small possible changes and vice versa. Many breeders feel that possible change values complement accuracies and help them determine just how thoroughly an animal has been evaluated. The accuracy/possible change chart lists possible changes in EPDs that can be expected with different levels of accuracy for the various traits.

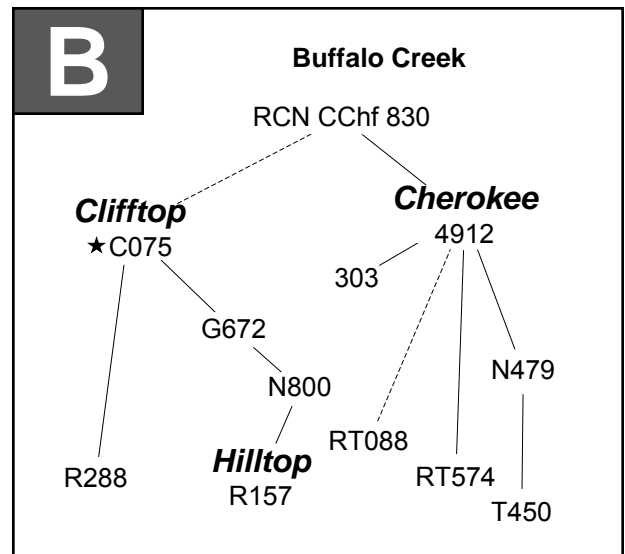

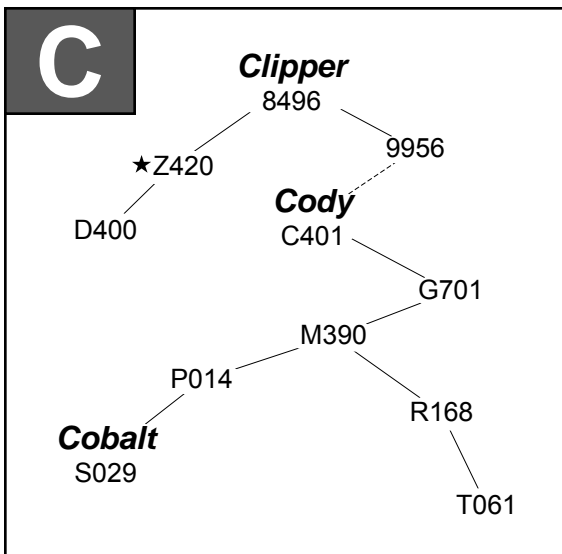

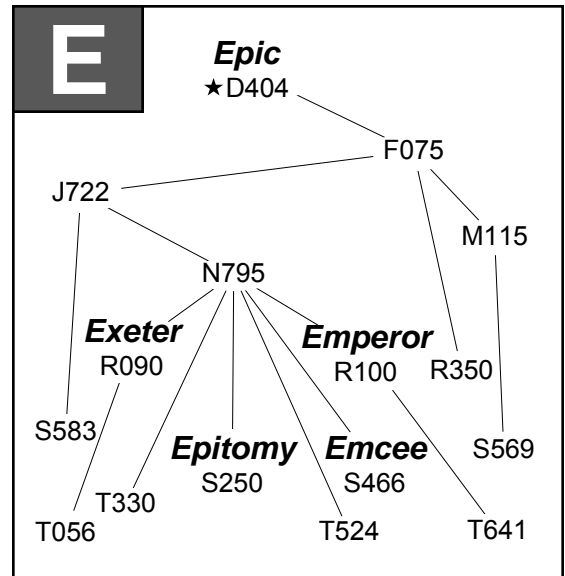

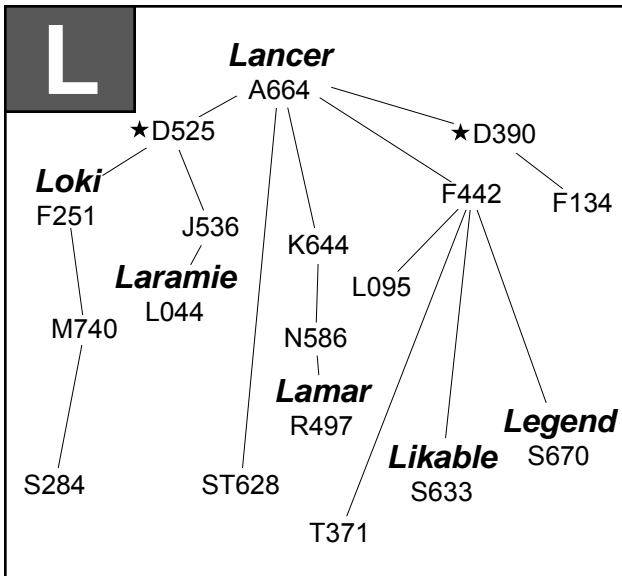

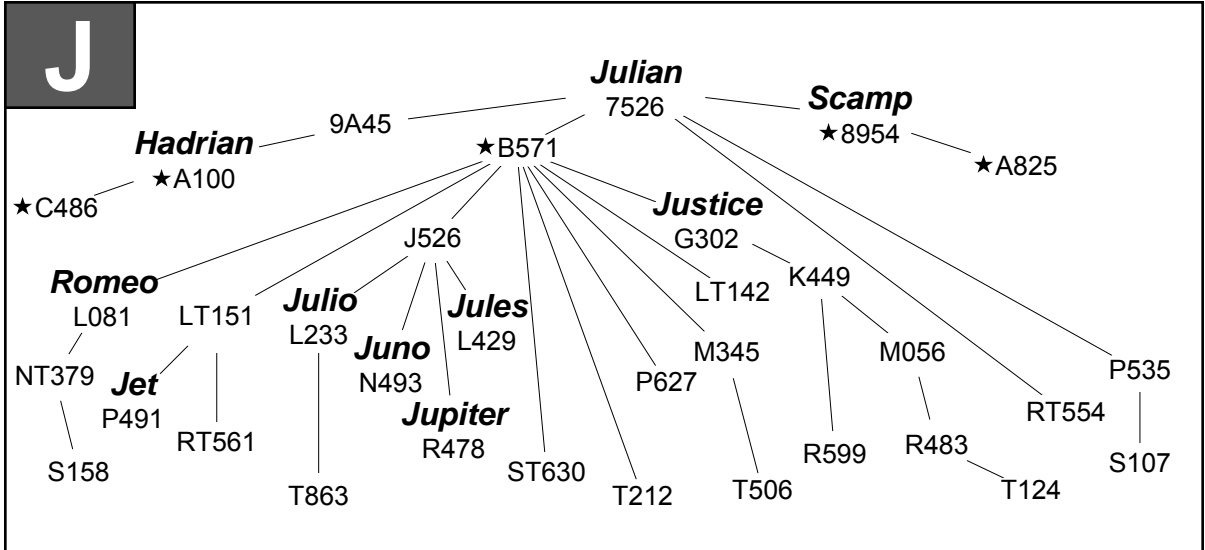

For more information on possible change values, please see the article by Dr. Bob Hough titled "Understanding EPD Accuracies and Possible Change". This article can be downloaded from the Red Angus Association of America website at www.redangus.org.

Notes

Beckton History

Sal keeping records.

Waldo Forbes - 1st President of the Red Angus Association.

Beckton house/office before being moved in 1905 to its current location. This house was built in the 1880s by George Beck, the original homesteader. The antlers are still on the porch, and it is one of the oldest buildings in Sheridan County.

The Waldo Forbes family in 1959: Ellen, Julia, Sal, Sarah, Cherry,, Spike, and Cam & Elfie in front.

Inspection Committee at Beckton (1954), including George and Vernice Chiga, Sal and Waldo Forbes and Spike.

Beckton Larkabeau O "220" in 1959 - the 1st Red Angus Bull at ABS

Forrest Bassford and Sal Forbes

Beckton HalfmannHustler R588 is another outstanding sire for phenotype and eye appeal. He spreads calving ease and growth like few sires. And he is a rare sire that is homozygous for tenderness genes, scoring the highest rating of 10 on Igenity's scale, and the maximum Six Star rating by Genestar. Quantity limited, but also available through co-owners Halfmann Red Angus of Miles, Texas.

Nebula M045 is being leased to ABS, but we have available semen for sons that we are using. Nebula P093 is his top son for growth. His calves rank well above the average for our herd at both weaning and yearling. P093 was a large rib-eye bull as a yearling, and his calves are being measured with large rib-eyes. P093's carcass Rib-eye EPD is high and climbing. Commercial quantities available.

Nebula P707 amplifies the maternal traits of the Nebula line. He is out of a high milking 2 year old Lana dam, and that maternal line is carrying forward, because his own daughters are milking very well. She was a modest sized dam, and P707's frame is 5.2, so we are seeing a very efficient, low maintenance sire that puts significant growth on his calves.

FIRST CLASS

LOW MAINTENANCE

Beckton's herd has the lowest Maintenance Energy requirements EPD of any major Red Angus herd. The average Maintenance Energy EPD of our sale bulls is -2, so that as a group these Beckton sale bulls will be at the top 5% of the breed for reducing cowherd feed needs. Many are in the top 1-2%. Almost all will be better than breed average. These bulls bring you the genetics to reduce long-term operating costs.

EARLY GROWTH

The average Beckton bull in this sale is also +58 for yearling weight EPD, higher than breed average, so you get genetics for early growth to market weight without the large mature size.

CARCASS QUALITY

The average Beckton bull listed is also well into the upper half of the breed for both Marbling EPD and Ribeye EPD (actually near the top third), so you get genetics that will position your cattle well in the end-product market.

CALVING EASE

The Calving Ease EPD for the average Beckton bull in this sale is +12, in the top 5% of the breed as well. With Beckton bulls you get the maximum in calving ease and calf survival.
