Sight-Unseen Purchase (by mail or phone)

If you are unable to attend the sale, we can help you select the bulls or females to fit your needs. Give us a phone call, letter, fax or e-mail (please refer to the the back cover), and we can make arrangements to handle bidding according to your directions. Bulls are bought at the lowest price, and satisfaction is guaranteed on bulls purchased sight unseen. Many of our repeat customers buy their bulls this way.

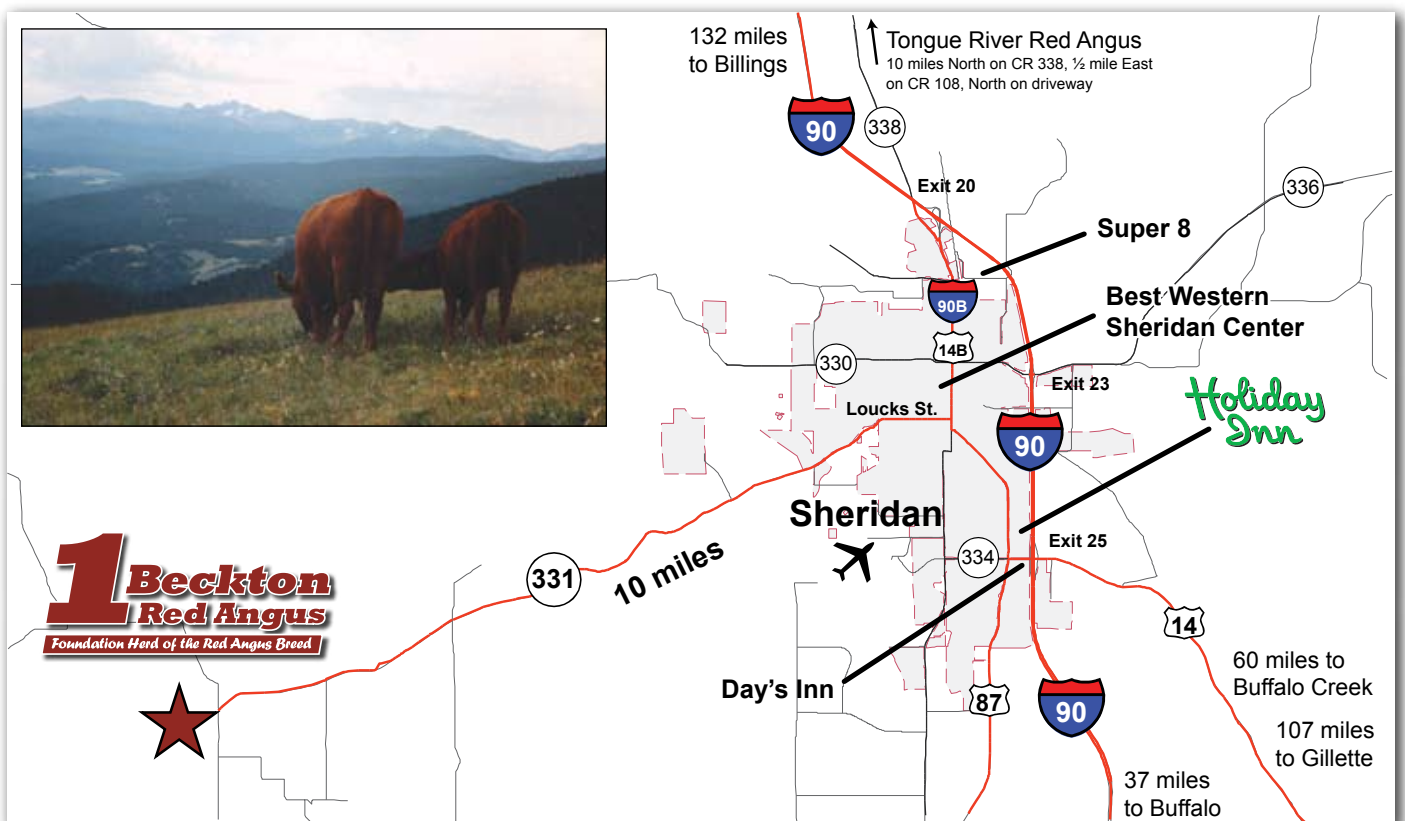

To provide us adequate time to assist you, please contact us before noon of the day prior to the sale.

Free Delivery

We pay for delivery for all bulls and registered heifers throughout the Continental U.S. If you do bring a trailer to haul your own, \$50 will be deducted from the price of each bull or registered heifer. Most of the sale cattle will be delivered from 1-3 weeks after the sale, although we will try to accommodate special needs. Although there occasionally are limitations, in most cases we can deliver the cattle directly to your ranch.

Payment

Payments can be made with cash, check payable to Beckton Stock Farm, or Visa/Mastercard on sale day.

Selling in catalog order, heifers sell following the bulls

Please join us for a complimentary dinner after the sale at the Holiday Inn.

Phone: 307.674.6095

Beckton Red Angus is the founding herd of the Red Angus breed. Started in 1945, it has since maintained the longest continuous performance testing and improvement program in the industry.

Some Facts about the Beckton Herd

- ▶ Beckton is the #1 herd for Low Maintenance Energy requirements, with the lowest average Cow Maintenance EPD of any major herd. Six of the top ten proven sires in the breed for lowest Maintenance Energy are Beckton sires. The average Beckton bull in this sale is in the top 5% of the entire breed for low Maintenance Energy EPD. **No other set of bulls will do a better job cutting your cowherd maintenance requirement and saving you money.**
- ▶ Beckton is also the #1 herd for easy calving, with the best average Calving Ease EPD of any major herd. Six of the top ten proven sires in the breed for low Birth Weight EPD are Beckton sires. The average Beckton bull in this sale is in the top 5% of the entire breed for calving ease. **No other set of bulls will do a better job giving you calving ease, for easier nights, and reducing calving loss.**
- ▶ Beckton bulls are leaders in total birth-to-market rate of growth. The average growth from birth to yearling weight EPD of these sale bulls is +62 !!- well above the average of the breed. **These are the bulls that give you not only low cowherd maintenance costs and higher calving ease, but also higher growth rate up to market age.**
- ▶ Beckton produces the top all-round carcass sires that combine Rib-eye and Marbling with Efficiency and Calving Ease. Beckton is producing the most "in-demand" sires in the breed, including Beckton Nebula M045 and Beckton Julian B571 – with top carcass traits and the breed's highest EPD rating for Stayability.
- ▶ Plus 65 years of selection for the convenience traits – good dispositions – cowherd fertility – good udders and milk. Our cattle grow up at high elevations in the Bighorn Mountains, as well as Wyoming range, so they offer excellent altitude adaptation and good feet and legs.
- ▶ There is no other sale offering which combines such good growth traits with this low cow maintenance and high calving ease, and in so many bulls.

The Foundation Herd of the Red Angus Breed – Serving our customers with industry leading genetics and the highest quality cattle – for 65 years.

Cam and Trish Forbes

Additional Sale Information

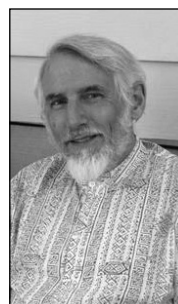

- ▶ The animals sell in catalog order.
- ▶ All animals are registered with the Red Angus Association of America, and registration certificates will be transferred to the new owners.
- ▶ All bulls selling have passed a rigorous fertility exam that included live semen evaluation, scrotal measurements, and reproductive tract examinations.
- ▶ Beckton has a comprehensive herd-wide health program which includes vaccinations for 7-Way, IBR, BVD, PI3, BRSV, Lepto, and ivermectin. The heifers are also vaccinated for bangs and vibrio.
- ▶ We plan to get semen collected on some of the bulls before the sale. Otherwise, we will work with the buyer to collect after the sale but before delivery.
- ▶ Since a DNA marker test for osteopetrosis (OS) was developed by RAAA a year ago, Beckton has tested every sire in use in our breeding program, as well as our major AI sires. We have now tested 73 current or recent Beckton-bred sires, from among all of our bloodlines. **All 73 have been tested OS Free.** We are comfortable there are no safer cattle than these. However, if you would like to have any sale bull tested, refer to the sale terms on page 79.
- ▶ From our earliest sales 40 or more years ago, Beckton has retained a 1/3 semen interest on every bull sold through our sales. This policy has had no effect for our commercial customers, who are not in the business of selling semen. To their benefit, it has meant that our commercial bull buyers have not had to compete with AI companies when they bid for their choice of bulls from our sale.

Here is further clarification. Some bulls are listed as selling ½ or other interest and full possession. For these bulls, both buyer and Beckton have the listed semen interest, and both have full rights to in-herd use as well as to market semen and issue certificates unless one or both parties lease its interest. Full possession goes to the buyer unless otherwise stated.

For all other bulls in the sale, Beckton retains a 1/3 semen interest. Full possession and salvage goes to the buyer, as well as the right to decide whether or not to collect a bull. Because we do not retain the right to require a bull to be collected, this 1/3 semen interest does not affect most of our customers, who can use the bull in any manner they wish. Those buyers interested in marketing semen from our bulls should read the Sale Terms on page 79.

AT

Dear Friends and Cattlemen,

On behalf of the Forbes family, we invite you to join us for our 65rd Anniversary Production Sale. We have a nice set of bulls and heifers this year. Following the sale, you are all cordially invited to a complimentary roast beef dinner in the Atrium at the Holiday Inn.

It is interesting to look at the offering this year, and look back at the sale offering from just 5 or 10 years ago. There is improvement in every measure of performance. The overall average yearling weight EPD's have increased from the +40's to nearly +60's, and weaning EPD's by the same proportion. Average birth weight EPD's have actually declined slightly, Carcass EPD's have improved substantially, as has milk EPD, and Stayability has gone from +7 to +14 in about 8 years. The increase in Stayability is particularly encouraging, because it means that our cattle are really working in other people's herds.

We had a very dry summer last year, but the bulls look good regardless. In keeping with our reputation, we offer only bulls which offer a high level of performance and structural soundness. We have also screened the bulls for disposition and made sure that anything which was questionable would not be in the sale. On the final weighing just recently, they were really quiet and easy to handle.

While the economy has had some problems, the future of the industry looks excellent. The national beef cow herd continues to decline, while export markets are re-gaining market share, and even the economy looks to be improving. Demand for energy likely will keep feed costs relatively high, but beef producers have alternatives, whereas pork and poultry do not.

The best management strategy to deal with high feed cost is to raise cattle which need less feed. Beckton has the leading genetics in the industry to moderate cow size and to reduce maintenance requirements. Our herd-wide cow maintenance energy EPD's are the lowest in the industry. We believe these bulls will do a better job producing the kind of mother cows that we are all going to need in the years ahead.

We are pleased with our bulls and heifers, and think we have a top selection to deliver to you. Two of the top bulls on test were Julian B571 sons, and we are offering them both. After the sale we hope you can join us for an early dinner at the Holiday Inn. If we can help you in any other way, just let us know.

Shelley, Stephen, Trish, Tallie, and Cam

Sincerely,

Cam Forbes

APRIL: SPRING BULL SALE FALL: RED ANGUS FEMALES
RED ANGUS BREEDING STOCK AVAILABLE YEAR ROUND

The Beckton Program

Cow Size

The goal for Beckton's program has always been to develop breeding seedstock which offer increased levels of performance for the commercial cattleman. Increased performance does not mean maximizing weight and size, which have already reached the upper limit of economic value for the packer and consumer. It does, however, mean increasing performance related to calving percentage and weaning percentage; and increasing performance related to cow maintenance requirements and "pounds of calf per acre" efficiency.

Size Matters

Beckton cattle are already big enough for the consumer and the packer. Using yearling weight EPD as the best available indicator of market size, the average for our sale bulls is +58. The Red Angus breed average for 2008-born animals is +56, so on market size our cattle are directly comparable to industry standard. They are comparable for weaning weight EPD also, so Beckton cattle offer weaning and yearling performance very similar to today's mainstream Red Angus.

The big difference between Beckton's program and others is that we select for additional weaning and yearling weight, but with the restriction that we have maintained about the same cow size as 30 years ago. In contrast, the industry has allowed cow size to increase at the same rate as calf size. Cow size is the largest factor determining maintenance requirements. Our goal over the past 30 years has been to increase efficiency, not size. No other seedstock breeding program has had such a goal, or maintained it for so long.

Beckton Cow Weight Average (lb.)

Year	1978	1982	1986	1990	1994	1998	2002	2006	2009
Wt.	1,126	1,126	1,064	1,115	1,067	1,125	1,104	1,093	1,102

(mature lactating cows taken at weaning)

Cow weights vary from year to year depending on body condition or other short term factors. But overall our cow size has stayed fairly constant over time.

The Industry Problem

As shown on the graph on the next page, industry-wide cow size has increased by around 25% over this same period. But look at the industry-wide trend in feed use per cow over the same period, shown by the use of hay:

Industry Hay Use (tons/animal unit)

Year	1978	1982	1986	1990	1994	1998	2002	2006	2007
Hay Usg.	1.43	1.62	1.91	2.00	1.94	1.99	2.08	2.05	2.04
Pct.	100%	113	134	140	136	140	146	143	143

(Src.: USDA Econ. Research Service, 2007 is newest available data)

Industry-wide, production per cow is up about 22%, but hay consumption per cow has risen over 40%.

Why does hay use increase at a faster rate than cow size or production per cow? Hay and grain are supplements to the cow's main diet, which is grass, and grass supply is relatively fixed by environment. Each increase in cow feed requirement must be met entirely by supplements, or by a combination of supplement and reduced stocking rate. A small increase in cow feed requirement leads to a reduction in stocking rate or a large increase in higher-cost, supplemental feed needs.

If any gains have been achieved in the feedlot sector due to increased animal growth, they have been overwhelmed by increased cost of production in the cow-calf sector.

Randy Zier

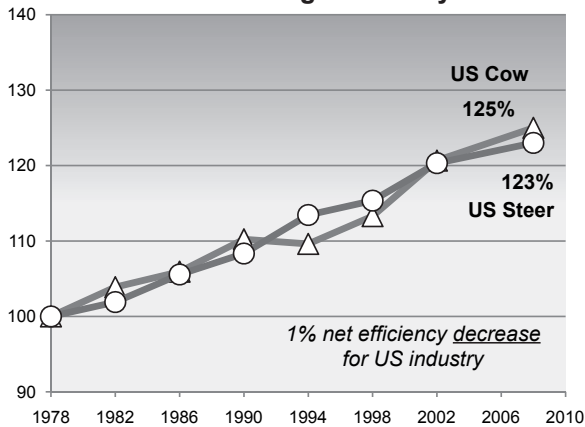

Mick McClure

Alan Sanders

Efficiency

30 Years of Change: Industry-Wide

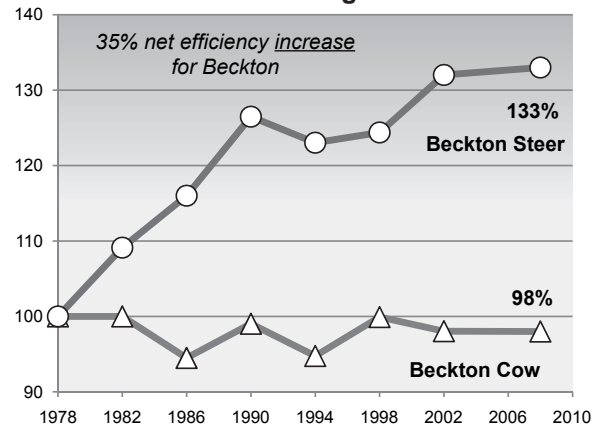

The graph at left shows how, for the U.S. cattle industry overall, the increase in average calf weights, as measured by steer slaughter weights, has been directly matched by an increase in average cow weights. (Percentages are based on USDA slaughter weight data for steers and cows respectively, using 1978 as a base year. Data for heifers slaughtered shows an identical trend.) Over 30 years, there has been minimal change in overall cowherd efficiency.

This graph shows the failure of cross-breeding and composite breeding to do little more than simply increase general cattle size. In the promotion of composites, the impact of retained heterosis on mature weight is too often ignored. Crossbreeding and composites are sold as a free lunch, but they aren't necessarily free after all.

We have accomplished this by selecting for growth, restricting birth weight and cow size creep, and multiplying each incremental change rapidly throughout our entire cowherd and all of our bloodlines. Usually this has meant working within our own bloodlines rather than introducing out-crosses, because the outside genetics for the direction we wanted to go haven't been available. The overall key to success is simply that we have been making small progress in multiple traits, but doing it consistently over a very long period of time.

30 Years of Change: Beckton

The graph at right shows Beckton cowherd data over the same time period.

1. Beckton cow size has shown negligible change over the past 30 years, while the industry has experienced a substantial increase in cow size.
2. Even without increasing cow size, we have raised the rate of early growth in Beckton cattle, using intense genetic selection and generation turnover, and by more than the rest of the industry.
3. The net change in efficiency as measured simply by "calf weight divided by cow weight", is significantly higher with Beckton's genetic program, compared to mainstream cross-breeding based on retained heterosis.

These eight combine for 130 years at Beckton

Management

One Bull – the Simple Solution is the Best Solution

Many cattlemen use Beckton bulls for their heifers because of their low birth weights and high calving ease. Our bulls are even better when used on cows, because replacement heifers tend to be selected from calves out of older cows. **Keeping replacement heifers sired by Beckton bulls is the quickest way to limit cow size creep and to moderate cow size for the future.** In our own program we use the same bulls on both heifers and cows. Every bull is used his first year with heifers to evaluate calving ease, and used in future years with older cows. We get calving ease, growth, and moderate-sized replacements, all with the same bull.

Quietness and Ease of Handling

The necessity of record keeping means that our cattle will be handled much more than commercial cows. **This benefits our seedstock customers because our cattle will be quieter and easier to handle.** Good disposition is one of our most valued traits.

Selection for Industry Requirements

In order to make selection decisions appropriate to the commercial beef industry, seedstock cattle need to be managed and measured under conditions which will approximate the commercial industry. **Our cows are run strictly on grass, with hay only if weather conditions require it, because that is how the commercial industry runs cows.** However, almost all commercial calves go into feedlots before slaughter, so feedlot performance and efficiency is an important trait for calves. **Simply put, a producer needs to know how his cows perform on grass, and how his calves perform with feed.**

Our bulls are run on a performance test designed to provide the fairest basis of comparison among them, and

this requires a compromise. Our bulls receive a “growing” ration high in roughage and protein and not as high in energy as a steer would receive. **We want to get a good measure of gainability with which to compare bulls, but we don’t want the bulls fat.**

*Craig Uden, Darr Feedlot Manager
Photo courtesy of the Lexington Clipper-Herald*

Craig Uden, Mitch Ziebell of Darr, NE

In the fall of 2005, Lane Kugler retired and sold his bull testing facility to a neighboring operation - Craig Uden with Darr Feeders. **The name change is somewhat misleading, because the bulls are still in the same pens they have always been in.** Unlike the Kugler’s, Craig actually runs a complete operation vertically integrated from commercial cow-calf production all the way to the packer door. Bull testing is a natural fit. Craig Uden started at Darr in 1984, and has served on numerous committees and organizations in Nebraska. Mitch Ziebell has joined him and has taken over responsibility for the daily management of our bulls at Darr. **We have been very impressed with what conscientious care Mitch oversees all aspects of the bull management.**

Using New Selection Tools

Maintenance EPD

This EPD predicts the relative feed energy requirement for maintenance, for cows produced by a sire or female. A bull with an ME of -3 (minus 3) is expected to sire replacement daughters which will need 10 fewer mcals of energy per month than a bull with an ME of +7.

We believe this is an important EPD because feed costs, both direct and indirect through ranch overhead, make up by far the largest proportion of operating costs. It can have much more direct impact on ranch profitability than Marbling or Ribeye EPD for example.

The Beckton herd is the breed's top herd for low maintenance energy requirements, with the lowest average herd ME of any major herd, based on all sires listed on National Sire Evaluation. **The average Beckton cow is in the top 4% of the entire breed for lowest Maintenance Energy requirement.**

Calving Ease

The Red Angus Calving Ease EPD was introduced in 2003, and is a more direct measure of calving ease than birth weight alone. Calving Ease is defined as follows: "The expected differences of calving ease measured as the probability difference (between sires) of unassisted calvings among offspring." For Calving Ease EPD, the higher number is better.

There are two Calving Ease EPDs – "Direct", a predictor of an animal's own offspring; and "Maternal", a predictor of a daughter's calving ease. Unless stated otherwise, we publish the Calving Ease Direct because most of our customers' primary concern is selecting bulls for use on first calf heifers.

Beckton's average Calving Ease EPD is +13, seven points higher than the Red Angus breed average of 6, due to our long history of selection for moderate birth weights. **The average Beckton bull is in the top 4% of the entire breed for highest Calving Ease.**

Cow Efficiency

We present two indicators of efficiency. The first is Weaning Percent, a simple percentage of calf 205 day weight divided by the dam's actual weight at weaning. The second is PRI Cow Efficiency. This also measures calf weaning weight, but relative to the cow's metabolic weight, and is expressed as an index above or below 100.

These efficiency measures are best used as indicators of where an animal is relative to others, rather than directly for selection. For example, if we see an animal with a low efficiency, we would look at the actual calf and cow weights to decide if the calf is too small, or the cow too big for the environment. That in turn will suggest corrective actions. **In general, select for the traits you need to change to make cattle more efficient, and efficiency will be the result.**

After 64 years of this performance selection, we believe our cattle are the most efficient in the industry.

Dam Information

A significant difference with our catalog is the greater amount of information about the dams we provide. Weaning percent and Cow Efficiency are explained above. In addition and next to each sale animal, we give the dam's age when that calf was born, and the dam's actual weight when the calf was weaned last fall. We also provide her progeny averages – the average birth weight, weaning ratio, and yearling ratio, of her calves.

Additional Facts about the Beckton Program

- Birth weight**
- ▶ Every sire entering our own program is used first on our own heifers, then on our cows.
 - ▶ We have never used high birth weight sires in any part of our program, so big birth weights are rare.
 - ▶ We get the pay weight, but with lower birth weights and greater calving ease.
 - ▶ Full production from heifers. We use the same bulls on heifers and cows.

- Growth**
- ▶ Weaning efficiency, and rate of gain to slaughter weight second to none.
 - ▶ Growth traits must be consistent with maintaining maternal qualities.
 - ▶ Beckton cattle are ideally sized for today's packer demand.

- Hardiness**
- ▶ Every cow in the herd has spent part of her life in the Big Horn Mountain summer range, at elevations from 7,000 to 10,500 feet.
 - ▶ In 2001 we PAP tested all of our herd sires. The herd average PAP score was 32.5 at 4000', equivalent to a herd average PAP of 39 at 8000' (excellent scores).
 - ▶ By the time she is 5, our average cow will have been trailed over 80 miles, above and beyond normal pasture rotation.

- Efficiency**
- ▶ The typical dam of our bulls weans over 50% of her body weight in 205 days, under range conditions, with no creep-feeding.
 - ▶ The average dam produces over 100% of her own body weight in a year.
 - ▶ The average mature cow (age 5+) weighs about 1100-1125 pounds.

- Fertility**
- ▶ Every bull in our program is used in natural service, with 30-50 heifers/cows.
 - ▶ Every cow in our program must cycle naturally and breed early under range conditions.

- Value**
- ▶ Beckton Red Angus produce more growth without high birth weights.
 - ▶ They are the one-bull solution that can be used on both heifers and cows.
 - ▶ Carcass quality is an extra benefit.

- Reliability**
- ▶ Beckton has been genetically improving Red Angus since 1945, a 30-60 year lead time over other producers.
 - ▶ It is a complete, genetically sound breeding program, which demands whole-herd performance.

The Bulls

Our bulls are managed to give our customers many years of productive service. We have been testing breeding bulls for 45+ years, longer than almost anyone. Our own breeding is based on natural service, not AI, so we see how bulls work in the pasture. We use these bulls with our own cows, on every kind of terrain and high in the Big Horn Mountains. For the first twenty years our bulls were raised and tested at home here in Wyoming. They received some grain, but otherwise grass pasture and dry hay – a forage dominated diet. In 1979 we moved our test to the Kugler's in Nebraska, where the bulls got a ration including silage, corn and protein.

It was 30 years ago that we started bringing home from Kuglers, and used them with our own cows. The improvement in libido and breeding performance in these bulls was dramatic. While it is possible to feed bulls improperly under any program, we would strongly question those who promote the notion of any advantage to “forage-raised” bulls.

We have used over 400 of these bulls in our own herd, and have never had a bull fall out of our program prematurely due to his feeding or testing management. Beckton Julian B571, Lancer F442, and all of our other great sires were fed and tested at the Kugler facility. We think any notion that forage raised bulls will somehow hold up better or last longer, lacks validity.

We do not publish a list of Ultrasound ratios, because for most commercial people they are not a focus of selection. It should be noted that when we do mention them, the ratios may not agree with those calculated by RAAA. The difference is contemporary groups. For ratios we present, we use the same contemporary groups that we use for other yearling ratios. Sometimes a contemporary group may be larger than RAAA might have used, resulting in some difference in the actual number. We prefer this methodology because it reduces some misleading extremes in ratios that can occur when contemporary groups are too small.

Leading the sale is what we think to be one of the best "cowman's" bulls in the sale. Not extreme, but he has it all - very low Maintenance EPD; very high calving ease; very high yearling weight ratioed against his peers; very high Stayability EPD with solid Milk; lots of meat with Ultrasound ratios of 120 for Marbling and 112 for Ribeye; the biggest scrotal in the sale. And his mother is a wonderful proven eight-year old Lana, weighing a perfect 1140 lbs., who has weaned every calf in the top half of the herd. **Selling ½ Interest & Full Possession.**

A second great opportunity at a top B571 son. W372 ranked even higher on yearling weight on test, with lower birth weight, and really spreads birth and yearling growth. Like his brother, his scrotal is near the top of the bulls. His Sierra dam is a cow we thought so highly of that we selected her as one of the few cows in our herd to flush for ET. Her progeny record shows her performance. **Selling ½ Interest & Full Possession.**

Beckton Julian B571 is the great proven sire in the breed, with great herd sire sons all over the country. This year we had only two sons, but they both finished near the top of the test. Lot 2 could be one of the greatest B571 sons ever. Out of a real nice, proven, high performance, moderate size Lydia dam. Low maintenance, huge scrotal, and Ultrasound ratios of 109 for Ribeye and 134 for Marbling. **Selling ½ Interest & Full Possession.**

This Accent son was Mitch Ziebell's top overall pick from every bull we had on test this winter - the only bull to get a perfect 10. We had Lot 4 DNA profiled also, and he scored a perfect 10 on Igenity's scale to measure Tenderness. He has loads of performance, and his Indigo dam is a 10 also - 10 years of age and a 10 for progeny performance. **Selling ½ Interest & Full Possession.**

The best overall EPD's in the sale, the way we see them. Heritage W027 does everything. Given that calves out of two year old's usually don't get the same start as cows out of older cows, his performance, statistics, and looks are phenomenal. His Ultrasound ratios were outstanding also - Ribeye 112 and Marbling 124. **Selling 1/2 Interest & Full Possession.**

It seems to work that top sires connect to top cows. Here the dam is a ten year old Lakme line cow that consistently produces well, and is the dam of one of our good four year old herd sires - Beckton Loki S284, Ref. Sire L-2. Most people associate Beckton with Julian, Lancer and Nebula, but look at just the few bulls at the front of this sale and see how many times you see Loki on the dam side of the pedigree. Lancer D525 is the sire of Loki, and also the maternal great-grand sire of Lot 6. And his Ultrasound ratios are Marbling 106 and Ribeye 116 **Selling 1/2 Interest & Full Possession.**

TR Nebula WT952 reflects the best of Tongue River and Beckton genetics. He scores in the top 25% of the breed in all five of the maternal traits and still ranks in the top third of the breed for the revenue traits of Yearling weight and Ribeye. He was Tongue River's highest gaining bull on test at 4.59 lbs. per day. **Selling 1/2 Interest & Full Possession.**

Lot 9 is the highest yearling weight 1-A bull on our entire test this year. For the dry year we had last summer, his weaning weight is off the charts. His Lana dam is also off the charts - almost certainly the highest performing cow in our herd. Her calves do it at both weaning and yearling, and the birth weights are very reasonable. His scrotal is powerful, and his ultrasound Rib-eye measure of 15.4 is one of the very biggest. **Selling ½ Interest & Full Possession.**

The bloodline which gets the most inquiries from customers looking for genetics to complement Julian and Lancer, is Epic. Beckton Epic N795 is our top proven Epic - a standout sire who regularly gives us top herd bulls. Like Lot 9, Lot 11 is a high performance bull with growth and carcass, and Ultrasound ratios of Marbling 125 and Ribeye 103. What doesn't show is that Epic N795 has more daughters producing in our herd than any other sire his age or younger - he is a female producer too. **Selling ½ Interest & Full Possession.**

Linebred Nebula M045 - this future herd sire really puts it all together - low Maintenance, growth, calving ease, carcass. His Ultrasound ratios are Marbling 126 and Ribeye 106, and he's out of just a two year old, but a very good two year old. He has Lancer F442 and Epic on the dam sides - and with the line-breeding possibly the most potential of any sire in the sale. **Selling ½ Interest & Full Possession.**

The Yearling Heifers

The Beckton cowherd is a complete package of genetics for today's industry - moderately sized, efficient producers. They combine calving ease, growth, and desirable carcass traits. They are feminine, maternal and quiet, with nice udders. All of our heifer calves trailed up with their mothers into the Bighorn Mountains to spend their first summer. They have learned the meaning of mothering ability. Most impressively, heifers like these produce the bulls for our sale. We have included heifers from the very top of our replacements.

We are also pleased to have a very nice set of heifers from Tongue River Red Angus. These heifers carry are

selected with a similar philosophy, and carry a large influence of Beckton breeding. Both the Tongue River and the Beckton heifers have received a vaccination for lepto/vibrio this spring, but have not had MGA or other additives to suppress heat and influence gains. They have been through a complete breeding soundness exam, and are cycling and ready to breed.

We can keep any sale heifers and breed them in natural service to the same herd sires we use with our own heifers. There will be a charge of \$250 per heifer plus delivery at cost in the fall. Visit with Cam or Forest.

Special Offer

Beckton is offering 2 straws of semen from any Beckton sire (for which we have adequate supply) to go with each Beckton heifer purchased. Tongue River likewise is offering two straws for each Tongue River heifer purchased for sires. We can still offer 2 straws of Nebula P707, but for sires such as Julian B571 and LT751, for which supply is very limited, the offer is 1 free straw. The buyer will only be responsible for shipping costs from Billings, Mt. The buyer may use the semen on any animal he or she chooses.

Reference Sires

The goal for Beckton's program has always been to develop breeding seedstock which offer increased levels of performance for the commercial cattleman. Increased performance does not mean maximizing weight and size, which have already reached the upper limit of economic

value for the packer and consumer. It does, however, mean increasing performance related to calving percentage and weaning percentage; and increasing performance related to cow maintenance requirements and "pounds of calf per acre" efficiency.

EPD Accuracies and Possible Change

EPDs are predictions, not true values, and we can therefore expect that EPDs will change from sire evaluation, as more information (i.e. progeny data) is included. A possible change value is an estimate of the amount of change (in trait units) that can be expected for a given EPD.

Technically, there is a 68% chance that the real genetic value (an EPD with a accuracy of 1.0) for any trait lies between its EPD plus its possible change value and its EPD minus its possible change value. For example, if a sire has a weaning EPD of +25 lb. and a possible change value of 10 lb., we can expect the true genetic value to be between +15 lb. (25 - 10) and +35 lb. (25 + 10) 68% of the time. We should not be surprised if his EPD in next year's evaluation is as high as +35 or as low as +15. If next year's EPD should happen to be slightly outside of this

range, keep in mind there is nearly a one-in-three chance of that happening; however, significantly larger deviations can occur.

Possible change is simply another way of expressing accuracy of an EPD. High accuracy sires will have small possible changes and vice versa. Many breeders feel that possible change values complement accuracies and help them determine just how thoroughly an animal has been evaluated. The accuracy/possible change chart lists possible changes in EPDs that can be expected with different levels of accuracy for the various traits.

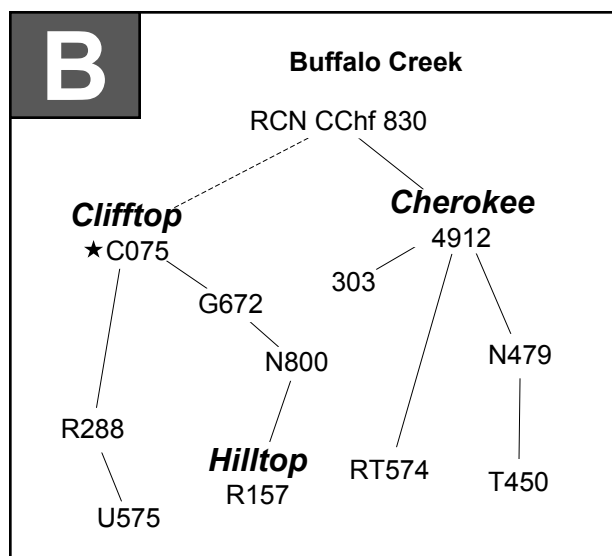

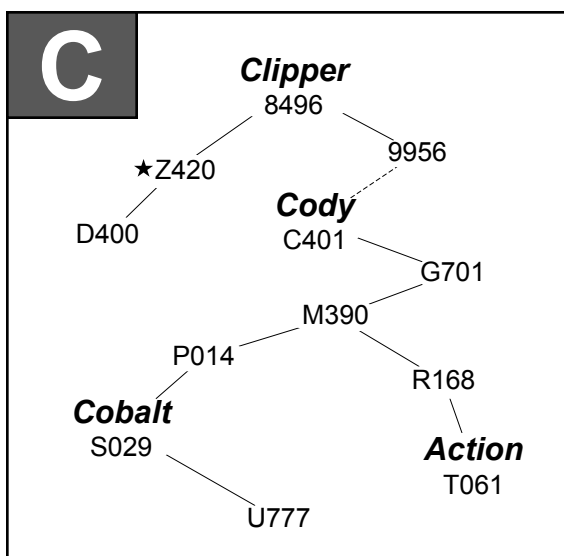

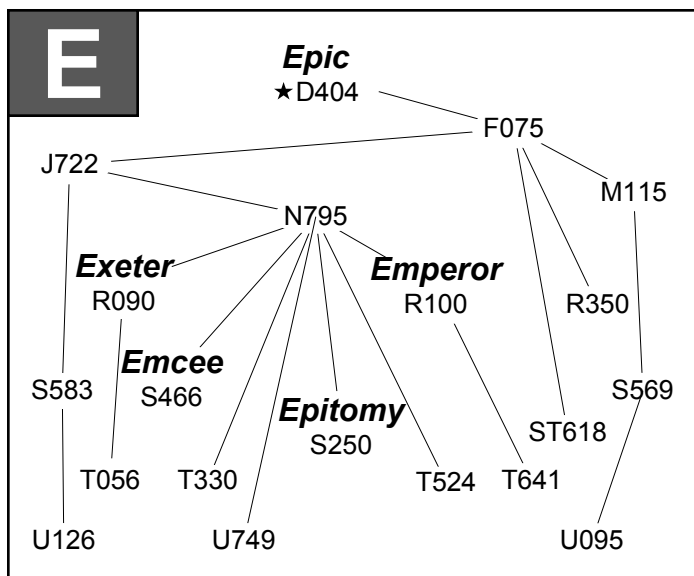

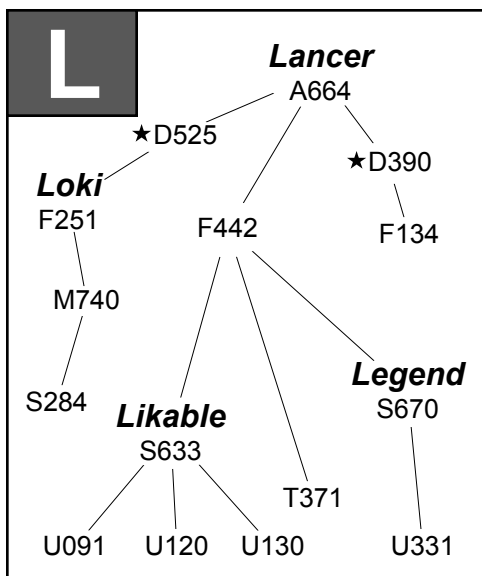

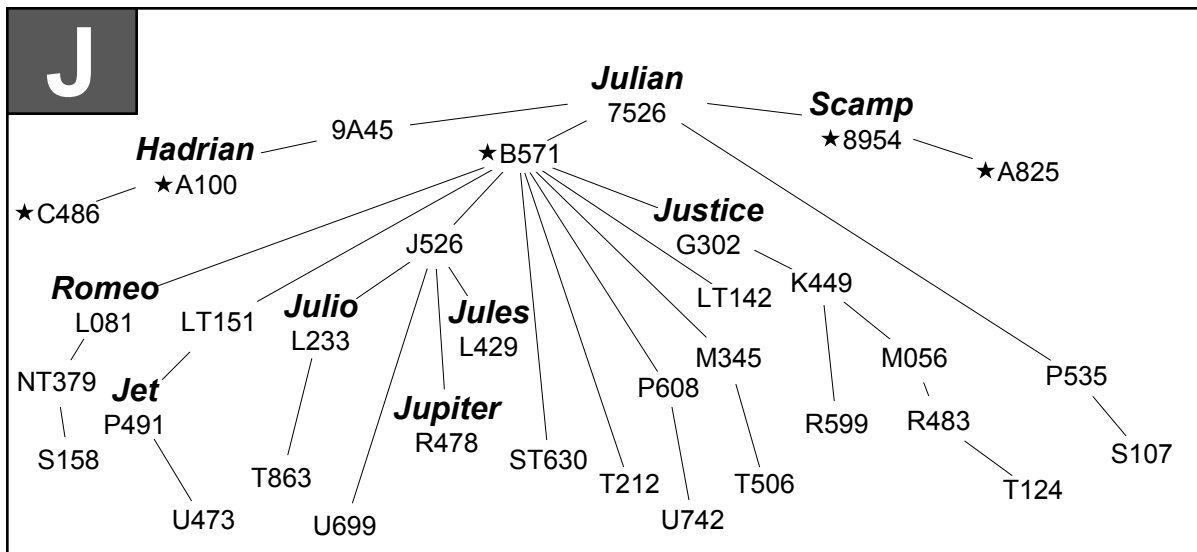

For more information on possible change values, please see the article by Dr. Bob Hough titled "Understanding EPD Accuracies and Possible Change". This article can be downloaded from the Red Angus Association of America website at www.redangus.org.

Sale Terms and Conditions

Except for those stated in the terms and conditions below, there are no warranties, either expressed or implied, as to the merchantability or fitness for a particular purpose with respect to the cattle being sold at this auction. The warranties and guarantees set forth in the "Terms and Conditions" are in lieu of all other warranties, either expressed or implied, and the remedies provided therein shall be the sole and exclusive remedy for the Buyer, or any party claiming through Buyer, for any breach of warranty or guarantee therein provided, and all other obligations or liabilities.

The information in the catalog is believed to be accurate, and the information seller believes to be most representative. It is the nature of seller's business that the seller engages in a continual process of collecting new data and information. Therefore, any information presented at the time of sale is always subject to revision, correction or update.

I. BIDDING

The Auctioneer in charge will settle any disputes as to bids, and his decision on such matters shall be final.

II. TERMS

Terms of sale are cash or personal check unless satisfactory credit arrangements have been made with vendor prior to sale.

III. PURCHASER'S RISK

Each animal becomes the risk of the purchaser as soon as sold, but it shall be the obligation of the Seller to see that animals are fed and cared for free of charge to purchaser, until loaded for shipment or until the expiration of 48 hours after the sale, whichever occurs sooner.

IV. DELIVERY

For any animals for which delivery or 'free delivery' is offered, the following terms shall apply. Each animal becomes the risk of the purchaser as soon as sold, and through the time of delivery. The seller will arrange transportation and delivery schedules, and may combine animals from one or more purchasers for convenience and to reduce costs. If 'free delivery' is offered, seller will pay the cost of transportation, but assumes no other liability. Once the purchaser has been notified of the date and approximate time of delivery (morning, afternoon, evening, etc.), it is the responsibility of the purchaser to arrange adequate and agreeable location and facilities for unloading each animal. When unloaded at the agreed upon location, all care and management of the animal is the responsibility of the purchaser.

V. CERTIFICATE OF REGISTRY

A transferred certificate of registry will be furnished to the purchaser for each animal.

VI. HEALTH

All animals are eligible for interstate shipment, except as otherwise announced. Interstate health papers will be furnished for each animal requiring T.B. and Bang's tests in accordance with Federal Regulations.

VII. A.I. NON-OWNER BULL PERMITS

A.I./Non-owner Bull Permits shall be furnished by the Seller, at no cost to the Buyer, for all females bred artificially or naturally to bulls not owned by the Seller.

VIII. ANNOUNCEMENTS

Any changes from information of any kind in this catalog will be announced from the auction box and such announcements shall take precedence.

IX. BREEDING GUARANTEE

All animals are sold as guaranteed breeders. Each bull has been officially fertility tested as "Satisfactory Breeder" prior to the sale. However, seller cannot guarantee against physical injury or illness following the sale. But if within 8 months following the sale, the buyer has evidence that the animal is not a breeder, the buyer may obtain a statement signed by a licensed veterinarian to that effect, such statement also indicating that there has been no injury or illness to the animal following the sale, and return the bull to the farm of the seller for adjustment. If the seller cannot then prove the animal to be a breeder, an adjustment will be made by the seller, either by substituting an animal of equal value, or by the refund of the full purchase price. Such adjustment shall be considered full settlement and satisfaction of all claims. No guarantees apply to animals which are shown following the sale.

Any female that has had a calf prior to the date of sale shall be considered a breeder without further guarantee. Any female that has not had a calf prior to the sale, and which fails to conceive after having been exposed to a bull of demonstrated fertility for at least 60 days, may be returned to the seller at the buyer's expense for a full refund of the purchase price. Such refund shall be considered full adjustment and no further adjustment or compensation shall be due. All pedigree and breeding information represents the best estimate at the time it is collected, but is subject to revision or correction in the future.

X. GENETIC DEFECT AND PARENTAGE GUARANTEE

For complete rules and regulations in regard to genetic defects or parentage guarantee contact the RAAA. Ask for section XI - in the Sales and Terms Recommended policy.

XI. RETAINED INTEREST AND SEMEN RIGHTS:

Buyer receives full possession and salvage value of all bulls in the sale, unless stated otherwise in the catalog or during the auction. On specific animals designated in the catalog or from the auction block, Seller is retaining an undivided 1/2 interest or other interest as stated. We reserve the right to collect and market semen on these bulls. Collection would be during the off season, at the buyer's convenience, and at seller's expense. The buyer has the option of obtaining semen at the same time, at cost, provided we are notified ahead of collection. If the buyer collects the bull, we would like to be notified so we may obtain semen if wanted.

On all other bulls in the Sale, except those so designated, the buyer has full possession, and shall have the sole privilege to determine if the bull is to have semen collected at any time in the future. On such bulls which are collected in the future, and from which semen is advertised or marketed commercially, seller retains a 1/3 royalty interest on all gross semen and certificate sales. On bulls which are collected by buyer, seller may pay his pro-rated share of collection costs, for which seller obtains semen and certificates for his own in-herd use. However, any decision to collect or sell semen, and the timing of such collection, is solely the right of the buyer.

XII. RIGHTS AND OBLIGATIONS

A. The above terms and conditions of sale shall constitute a contract between the Buyer and Seller of each animal and shall be equally binding upon both. Each sale or resale of an animal constitutes a separate transaction.

B. Neither the sale manager, the owner, nor any other person connected with the management of the sale, assumes any liability, legal or otherwise.

The Red Angus Association along with animal scientists have developed a DNA marker test for osteopetrosis (OS), a genetic disorder which in rare instances can cause the loss of a calf at birth. Since the test was developed, Beckton has tested every sire being used in our breeding program. Only one sire, from outside our program, tested positive as a carrier of the gene. Every sire bred and raised at Beckton has tested 'Free'. All of our major semen sires have also been tested 'Free'. We guarantee every sale animal to be OS Free, and if you have a concern, we will have any sale animal tested on request. If an animal were to test positive, we would replace the animal or refund the purchase price. The testing we have done shows no incidence of occurrence in any Beckton bloodlines for the past 30 years, and so we believe there is no safer herd than ours.

Beckton History

Sal keeping records.

Waldo Forbes - 1st President of the Red Angus Association.

Beckton house/office before being moved in 1905 to its current location. This house was built in the 1880s by George Beck, the original homesteader. The antlers are still on the porch, and it is one of the oldest buildings in Sheridan County.

*The Waldo Forbes family in 1959:
Ellen, Julia, Sal, Sarah, Cherry,, Spike, and Cam & Elfie in front.*

Inspection Committee at Beckton (1954), including George and Vernice Chiga, Sal and Waldo Forbes and Spike.

*Beckton Larkabeau O "220" in 1959 -
the 1st Red Angus Bull at ABS*

Mrs. Waldo (Sal) Forbes was honored as the first woman inducted into the Saddle and Sirloin Club's portrait gallery in Louisville, KY.

FIRST CLASS

LOWEST FEED REQUIREMENT

Beckton is the #1 herd for Low Maintenance Energy requirements, with the lowest average Cow Maintenance EPD of any major herd. The average Beckton bull in this sale is in the top 5% of the Red Angus breed for low Maintenance Energy EPD.

RAPID GROWTH TO MARKET

Beckton bulls are leaders in total birth-to-market rate of growth. The average bull in this sale goes from -3.6 pounds at birth (BWE PD) to +58 pounds at yearling (YWE PD). This spread of +62 pounds exceeds most other Red Angus bulls.

EASIEST CALVING

Beckton is also the #1 herd for easy calving, with the best average Calving Ease EPD of any major herd. The average Beckton bull in this sale is in the top 5% of the entire Red Angus breed for calving ease.

DISPOSITION, FERTILITY, ALTITUDE ADAPTATION

More than 65 years of selection for functionality – good dispositions, high cowherd fertility, good udders and milk. Our cattle rotate between Wyoming range and high elevations in the Bighorn Mountains, so they offer excellent altitude adaptation and strong feet and legs.
