Sight-Unseen Purchase (by mail or phone)

If you are unable to attend the sale, we can help you select the bulls or females to fit your needs. Give us a phone call, letter, fax or e-mail (please refer to the back cover), and we can make arrangements to handle bidding according to your directions. Bulls are bought at the lowest price, and satisfaction is guaranteed on bulls purchased sight unseen. Many of our repeat customers buy their bulls this way.

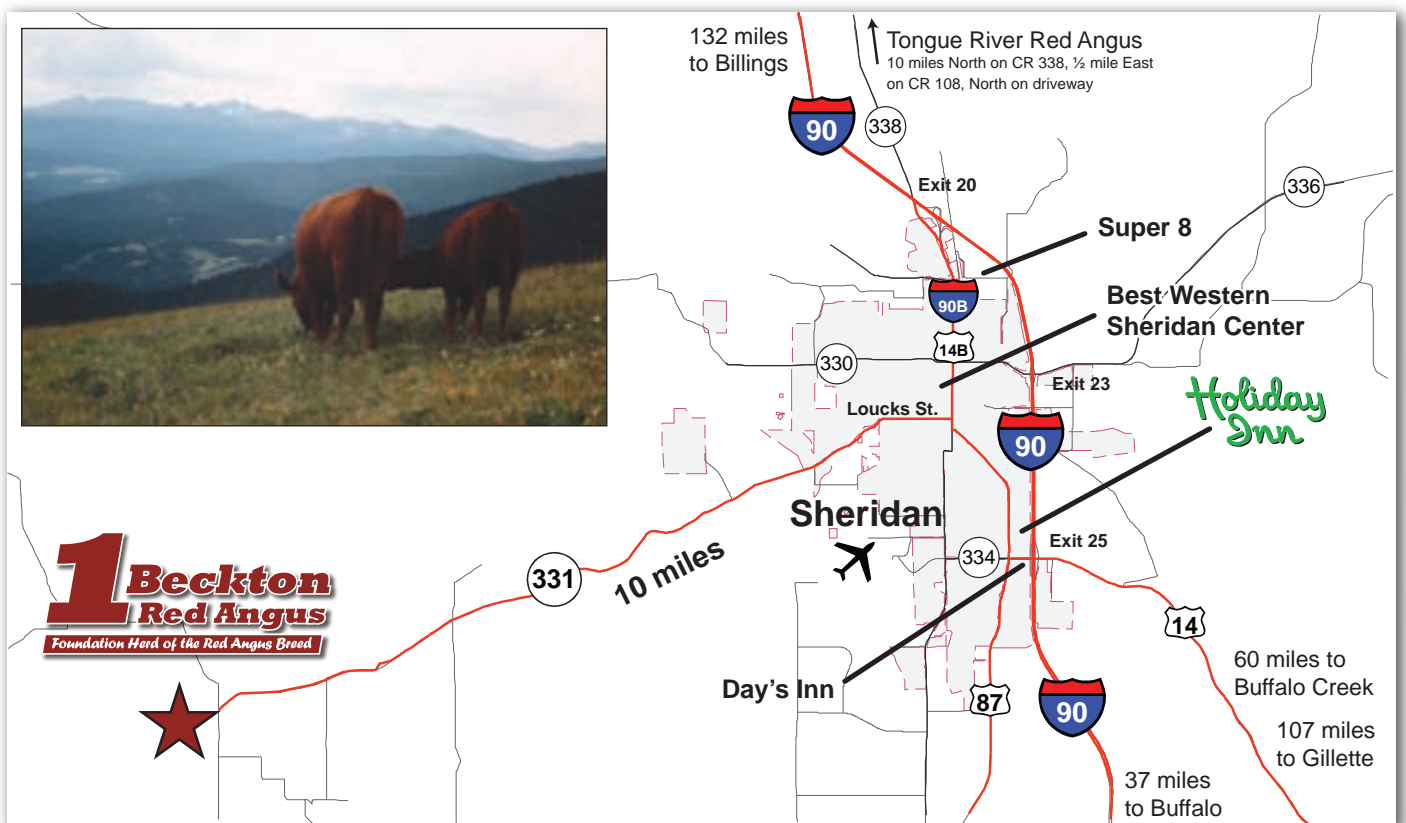

To provide us adequate time to assist you, please contact us before noon of the day prior to the sale.

Free Delivery

We pay for delivery for all bulls and registered heifers throughout the Continental U.S. If you do bring a trailer to haul your own, \$50 will be deducted from the price of each bull or registered heifer. Most of the sale cattle will be delivered from 1-3 weeks after the sale, although we will try to accommodate special needs. Although there occasionally are limitations, in most cases we can deliver the cattle directly to your ranch.

Payment

Payments can be made with cash, check payable to Beckton Stock Farm, or Visa/Mastercard on sale day.

260 Bulls • 71 Heifers

Selling in catalog order, heifers sell following the bulls

Please join us for a complimentary dinner after the sale at the Holiday Inn.

Phone: 307.674.6095

Beckton Red Angus is the Foundation Herd of the Red Angus breed. Started in 1945, it has since maintained the longest continuous performance testing and improvement program in the industry.

Some Facts about the Beckton Herd

- ▶ Beckton is the #1 herd for Low Maintenance Energy requirements, with the lowest average Cow Maintenance EPD of any major herd. Seven of the top ten sires in the breed for lowest Maintenance Energy are Beckton sires, more than all other herds combined. The average Beckton bull in this sale is in the top 5% of the entire breed for low Maintenance Energy EPD. **No other set of bulls will do a better job cutting your cowherd maintenance requirement and saving you money.**
- ▶ Beckton is also the #1 herd for easy calving, with the best average Calving Ease EPD of any major herd. Eight of the top ten sires in the breed for low Birth Weight EPD are Beckton sires. **No other set of bulls will do a better job giving you calving ease, for easier nights, and reducing calving loss.**
- ▶ Beckton bulls are leaders in total birth-to-market rate of growth. The average growth from birth to yearling weight EPD of these sale bulls is +59. **These are the bulls that give you not only low cowherd maintenance costs and higher calving ease, but also higher growth rate up to market age.**
- ▶ Beckton produces the top all-round carcass sires that combine Rib-eye and Marbling with Efficiency and Calving Ease. Beckton is producing the most "in-demand" sires in the breed - Beckton Julian B571, Beckton Nebula M045 and Beckton Nebula P707— with **top carcass traits, low maintenance energy requirements, and high Stayability.**
- ▶ Plus 66 years of selection for the convenience traits – good dispositions – cowherd fertility – good udders and milk. Our cattle grow up at high elevations in the Bighorn Mountains, as well as Wyoming range, so they offer **excellent altitude adaptation and good feet and legs.**
- ▶ There is no other sale offering which combines such good growth traits with this low cow maintenance and high calving ease, and in so many bulls.

Cam and Trish Forbes

The Foundation Herd of the Red Angus Breed – Serving our customers with industry leading genetics and the highest quality cattle – for 66 years.

Additional Sale Information

- ▶ The animals sell in catalog order.
- ▶ All bulls have passed a rigorous fertility exam that included live semen evaluation, scrotal measurements, and reproductive tract examinations.
- ▶ Beckton has a comprehensive herd-wide health program which includes vaccinations for 7-Way, IBR, BVD, PI3, BRSV, Lepto, and ivermectin. The heifers are also vaccinated for bangs and vibrio.
- ▶ Since a genetic test was developed by RAAA for osteopetrosis (OS) two years ago, Beckton has tested every sire in use in our program, as well as our major AI sires. All Beckton bred sires (nearly 80 in total) have tested **OS Free**.
- ▶ We plan to have semen collected on some of the bulls before the sale. We will also work with the buyer to collect bulls after the sale.
- ▶ Beckton's focus has always been on the commercial market. From our earliest sales over 40 years ago, we have retained a 1/3 semen interest on every bull sold through our sales. This policy has been for the benefit of our commercial customers, who are not in the business of selling semen. Buyers at our sale have not had to compete with AI companies when they bid for their choice of bulls. This policy continues with this sale, and unless otherwise designated in the catalog or by the auctioneer, the following terms are included in the terms and conditions, and re-stated here, and apply to all bulls in the sale:

Buyer receives full possession of the bull, and income from future sale of the animal itself. Buyer also has the sole privilege to determine if and when a bull is collected in the future. Seller retains a 1/3 semen interest on all sale bulls, including the privilege of in-herd use. If a bull is collected in the future, we would like to be notified so we may obtain semen, sharing pro-rata in the collection cost. On bulls from which semen is marketed commercially in the future, seller is entitled to a 1/3 royalty interest on gross semen sales, with buyer receiving 2/3 of gross sales.

This policy helps make every bull in our sale, from Lot 1 on, equally accessible to all of our customers, as well as giving the buyer full possession and control.

- ▶ **Special Rare Semen Option for BECKTON JULIAN B571 and BECKTON NEBULA P707:** These are the two premier sires in the Red Angus breed, offering the best of all traits for which our program is known. Semen is very limited and not on the market. We are offering four packages of 10 straws each, for choice of either of these sires, or split between them. Details are given on the inside back cover.

Dear Friends and Cattlemen,

On behalf of all of us at Beckton, we invite you to join us for our 66th Anniversary Production Sale. We have put together the best offering of Red Angus bulls and heifers ever, and hope you will take the opportunity to visit and see them. Following the sale, you are all cordially invited to a complimentary roast beef dinner at the Holiday Inn.

The future of the industry looks excellent. While feed costs are high, so are cattle prices. We are not seeing expansion in the nation's beef cow inventory. And beef cow numbers are unlikely to expand even as high prices continue, because the alternative uses of productive land are too attractive.

The best management strategy to deal with high feed costs, is to raise cattle which need less feed. Beckton has the leading genetics in the industry to moderate cow size and to reduce maintenance requirements. Ours is the #1 herd for low cow maintenance energy EPD, and this is the #1 sale for obtaining bulls with low maintenance energy genetics. But the producer can't give up a certain level of growth – his cattle must be cost effective for the packer to run through his plant. We need to watch both the demand side and the cost side.

But you also get strong growth, high calving ease, excellent carcass characteristics, and exceptional fertility and stayability. This results from so many years of performance selection in a consistent program. Our bulls are the leaders to achieve both low maintenance requirements and still produce steers with the gainability and growth to meet feeder and packers needs.

It has been a really good year for the cattle in spite of the summer and fall dryness. We recently went through all of the bulls again and they look fantastic. In keeping with our reputation, we offer only bulls which offer a high level of performance and structural soundness. We have also screened the bulls for disposition and made sure that anything which was questionable would not be in the sale. On the final weighing just recently, they were really quiet and easy to handle.

We are very proud of these bulls and heifers, and think we have a top selection to deliver to you. Join us for the sale and for dinner afterward. If we can help you in any other way, we will do our best.

Sincerely,

Shelley, Stephen, Trish, Tallie, and Cam

RED ANGUS BREEDING STOCK AVAILABLE YEAR ROUND

The Beckton Program

Cow Size

The goal for Beckton's program has always been to develop breeding seedstock which offer increased levels of performance for the commercial cattleman. Increased performance does not mean maximizing weight and size, which have already reached the upper limit of economic value for the packer and consumer. It does, however, mean increasing performance related to calving percentage and weaning percentage; and increasing performance related to cow maintenance requirements and "pounds of calf per acre" efficiency.

Size Matters

Beckton cattle are already big enough for the consumer and the packer. Using yearling weight EPD as the best available indicator of market size, the average for our sale bulls is +56, about the same as the Red Angus breed average, so for market size our cattle are directly comparable.

The big difference with Beckton's program is that we select for additional weaning and yearling weight, but with the restriction that we have maintained the same cow size over time. In contrast, the industry has allowed cow size to increase at the same rate as calf size. Cow size is the largest factor determining maintenance requirements. Our goal has been to increase efficiency, not size. No other seedstock breeding program has had such a goal and maintained it for so long.

Beckton Cow Weight Average (lb.)

Year	1978	1982	1986	1990	1994	1998	2002	2006	2010
Wt.	1,126	1,126	1,064	1,115	1,067	1,125	1,104	1,093	1,068

(mature lactating cows taken at weaning)

Cow weights vary from year to year depending on grass, weather or other short term factors. But overall our cow size has stayed fairly constant over time.

The Industry Problem

As shown on the graph on the next page, industry-wide cow size has increased substantially, 25% over this same period. But look at the industry-wide trend in feed use per cow over the same period, shown by the use of hay:

Industry Hay Use (tons/animal unit)

Year	1978	1982	1986	1990	1994	1998	2002	2006	2010
Hay Usg.	1.43	1.62	1.91	2.00	1.94	1.99	2.08	2.05	2.06
Pct.	100%	113	134	140	136	140	146	143	144

(Src.: USDA Econ. Research Service, 2007 is newest available data)

Industry-wide, production per cow is up about 22%, but hay consumption per cow has risen 44%.

Why does hay use increase at a faster rate than cow size or production per cow? Hay and grain are supplements to the cow's main diet, which is grass, and grass supply is relatively fixed by environment. Each increase in cow feed requirement must be met entirely by supplements, or by a combination of supplement and reduced stocking rate. A small increase in cow feed requirement leads to a reduction in stocking rate or a large increase in higher-cost, supplemental feed needs.

Any gains achieved in the feedlot sector due to increased animal growth, have been overwhelmed by increased cost of production in the cow-calf sector.

Efficiency

32 Years of Change: Industry-Wide

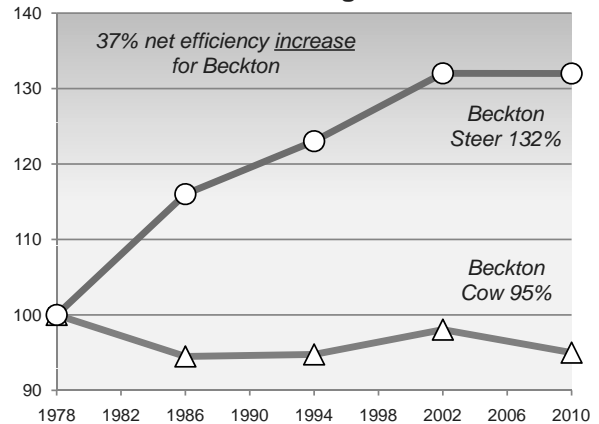

The graph at left shows how, for the U.S. cattle industry overall, the increase in average calf weights, as measured by steer slaughter weights, has been directly matched by an increase in average cow weights. (Percentages are based on USDA slaughter weight data for steers and cows respectively, using 1978 as a base year. Data for heifers slaughtered shows an identical trend.) Over 25 years, there has been minimal change in overall cowherd efficiency.

This graph shows the failure of cross-breeding and composite breeding to do little more than simply increase general cattle size. In the promotion of composites, the impact of retained heterosis on mature weight is too often ignored. Crossbreeding and composites are sold as a free lunch, but they aren't free.

We have accomplished this by selecting for growth, restricting birth weight and cow size creep, and multiplying each incremental change rapidly throughout our entire cowherd and all of our bloodlines. Usually this has meant working within our own bloodlines rather than introducing out-crosses, because the outside genetics for the direction we wanted to go haven't been available. The overall key to success is simply that we have been making small progress in multiple traits, but doing it consistently over a very long period of time.

32 Years of Change: Beckton

The graph at right shows Beckton cowherd data over the same time period.

1. Beckton cow size has shown no significant change over the past 32 years, while the industry has experienced a substantial increase in cow size.
2. Even without increasing cow size, we have raised the rate of early growth in Beckton cattle, using intense genetic selection and generation turnover, and by more than the rest of the industry.
3. The net change in efficiency as measured simply by "calf weight divided by cow weight" is significantly higher with Beckton's genetic program, compared to mainstream cross-breeding based on retained heterosis.

Management

One Bull – the Simple Solution is the Best Solution

Many cattlemen use Beckton bulls for their heifers because of their low birth weights and high calving ease. Our bulls are even better when used on cows, because replacement heifers tend to be selected from calves out of older cows. **Keeping replacement heifers sired by Beckton bulls is the quickest way to limit cow size creep and to moderate cow size for the future.** In our own program we use the same bulls on both heifers and cows. Every bull is used his first year with heifers to evaluate calving ease, and used in future years with older cows. We get calving ease, growth, and moderate-sized replacements, all with the same bull.

Quietness and Ease of Handling

The necessity of record keeping means that our cattle will be handled much more than commercial cows. **This benefits our seedstock customers because our cattle will be quieter and easier to handle.** Good disposition is one of our most valued traits.

Selection for Industry Requirements

In order to make selection decisions appropriate to the commercial beef industry, seedstock cattle need to be managed and measured under conditions which will approximate the commercial industry. **Our cows are run entirely on grass, with hay only if weather conditions require it, because that is how the commercial industry runs cows.** However, almost all commercial calves go into feedlots before slaughter, so feedlot performance and efficiency is an important trait for calves. **Simply put, a producer needs to know how his cows perform on grass, and how his calves perform with feed.**

Our bulls are run on a performance test designed to provide the fairest basis of comparison among them, and

this requires a compromise. Our bulls receive a “growing” ration high in roughage and protein and not as high in energy as a steer would receive. **We want to get a good measure of gainability with which to compare bulls, but we don’t want the bulls fat.**

*Craig Uden, Darr Feedlot Manager
Photo courtesy of the Lexington Clipper-Herald*

Mitch Ziebell, Craig Uden of Darr, NE

In the fall of 2005, Lane Kugler retired and sold his bull testing facility to a neighboring operation - Craig Uden with Darr Feeders. **The name change is somewhat misleading, because the bulls are still in the same pens they have always been in.** Unlike the Kugler’s, Craig runs a complete operation vertically integrated from commercial cow-calf production all the way to the packer door. Bull testing is a natural fit. Craig Uden started at Darr in 1984, and has served on numerous committees and organizations in Nebraska. Mitch Ziebell has joined him and has taken over responsibility for the daily management of our bulls at Darr. **We have been very impressed with what conscientious care Mitch oversees all aspects of the bull management.**

Additional Facts about the Beckton Program

Birth weight

- ▶ Every sire entering our own program is used first on our own heifers, then on our cows.
- ▶ We have never used high birth weight sires in any part of our program, so big birth weights are rare.
- ▶ We get the pay weight, but with lower birth weights and greater calving ease.
- ▶ Full production from heifers. We use the same bulls on heifers and cows.

Growth

- ▶ Weaning efficiency, and rate of gain to slaughter weight second to none.
- ▶ Growth traits must be consistent with maintaining maternal qualities.
- ▶ Beckton cattle are ideally sized for today's packer demand.

Hardiness

- ▶ Every cow in the herd has spent part of her life in the Big Horn Mountain summer range, at elevations from 7000 to 10,500 feet.
- ▶ In 2001 we PAP tested all of our herd sires. The herd average PAP score was 32.5 at 4000', equivalent to a herd average PAP of 39 at 8000' (excellent scores).
- ▶ By the time she is 5, our average cow will have been trailed over 80 miles, above and beyond normal pasture rotation.

Efficiency

- ▶ The typical dam of our bulls weans over 50% of her body weight in 205 days, under range conditions, with no creep-feeding.
- ▶ The average dam produces over 100% of her own body weight in a year.
- ▶ The average mature cow (age 5+) weighs about 1100-1125 pounds.

Fertility

- ▶ Every bull in our program is used in natural service, with 30-50 heifers/cows.
- ▶ Every cow in our program must cycle naturally and breed early under range conditions.

Value

- ▶ Beckton Red Angus produce more growth without high birth weights.
- ▶ They are the one-bull solution that can be used on both heifers and cows.
- ▶ Carcass quality is an extra benefit.

Reliability

- ▶ Beckton has been genetically improving Red Angus since 1945, a 30-60 year lead time over other producers.
- ▶ It is a complete, genetically sound breeding program, which demands whole-herd performance.

Using New Selection Tools

Maintenance EPD

This EPD predicts the relative feed energy requirement for maintenance, for cows produced by a sire or female. A bull with an ME of -3 (minus 3) is expected to sire replacement daughters which will need 10 fewer mcals of energy per month than a bull with an ME of +7.

We believe this is an important EPD because feed costs, both direct and indirect through ranch overhead, make up by far the largest proportion of operating costs. It can have much more direct impact on ranch profitability than Marbling or Ribeye EPD for example.

The Beckton herd is the breed's top herd for low maintenance energy requirements, with the lowest average herd ME of any major herd, based on all sires listed on National Sire Evaluation. **The average Beckton cow is in the top 4% of the entire breed for lowest Maintenance Energy requirement.**

Calving Ease

The Red Angus Calving Ease EPD was introduced in 2003, and is a more direct measure of calving ease than birth weight alone. Calving Ease is defined as follows: "The expected differences of calving ease measured as the probability difference (between sires) of unassisted calvings among offspring." For Calving Ease EPD, the higher number is better.

There are two Calving Ease EPDs – "Direct", a predictor of an animal's own offspring; and "Maternal", a predictor of a daughter's calving ease. Unless stated otherwise, we publish the Calving Ease Direct because most of our customers' primary concern is selecting bulls for use on first calf heifers.

Beckton's average Calving Ease EPD is +13, seven points higher than the Red Angus breed average of 6, due to our long history of selection for moderate birth weights. **The average Beckton bull is in the top 4% of the entire breed for highest Calving Ease.**

Cow Efficiency

We present two indicators of efficiency. The first is Weaning Percent, a simple percentage of calf 205 day weight divided by the dam's actual weight at weaning. The second is PRI Cow Efficiency. This also measures calf weaning weight, but relative to the cow's metabolic weight, and is expressed as an index above or below 100.

These efficiency measures are best used as indicators of where an animal is relative to others, rather than directly for selection. For example, if we see an animal with a low efficiency, we would look at the actual calf and cow weights to decide if the calf is too small, or the cow too big for the environment. That in turn will suggest corrective actions. **In general, select for the traits you need to change to make cattle more efficient, and efficiency will be the result.**

After 64 years of this performance selection, we believe our cattle are the most efficient in the industry.

Dam Information

A significant difference with our catalog is the greater amount of information about the dams we provide. Weaning percent and Cow Efficiency are explained above. In addition and next to each sale animal, we give the dam's age when that calf was born, and the dam's actual weight when the calf was weaned last fall. We also provide her progeny averages – the average birth weight, weaning ratio, and yearling ratio, of her calves.

The Bulls

Our bulls are managed in a manner to gain important performance data and information, and equally importantly, to develop and provide our customers with many years of productive service. We have been testing breeding bulls over 50 years, longer than almost any other producer. Our own breeding is based primarily on natural service, not AI, so we see how our bulls work in the pasture. We use bulls raised and managed just this way, with our own cows and heifers, on every kind of terrain, and high in the Bighorn Mountains.

For the first twenty years our bulls were tested at home here in Wyoming. They received some grain, but otherwise grass pasture and dry hay. In 1979 we moved our test to a facility managed by the Kugler family in Cozad, Nebraska, where the bulls got a ration including silage, corn and protein. When we brought our first bulls home from Kuglers' and used them with our own cowherd, we discovered a dramatic increase in libido and breeding performance. The effect of proper

nutrition was apparent, and the bulls would maintain condition and hold up better through the entire breeding season. We have continued managing our bulls at the same facility ever since, and we continue to see the same benefits.

We have since used over 500 of these bulls natural service in our own breeding program, on dry range and in the mountains, and have never had a bull fall out of our program early due to his feeding or testing management. Beckton Julian B571, Lancer F442, Nebula M045, Nebula P707, and all of our other great sires were fed and managed in Cozad. While it is possible to feed bulls improperly under any structure, we would strongly question those who promote the notion of any advantage to "forage-raised" bulls. Every year we see the results and success of our bull management program, and we serve many satisfied customers.

One doesn't often get a Lot 1 bull from a first calf heifer, but we expect great production from our first calf heifers. This Rose mother has delivered. Lot 1 does everything - a huge spread between low birth weight and high yearling weight; large Ribeye and high Marbling; very high Milk and Stayability - a money-making bull for any producer. Note the triple Epic in the pedigree.

A Lancer line bull with very high Marbling and excellent Ribeye, good Milk and Stayability. The 38 cm scrotal is unusually high coming off a first calf heifer, but Larkaba U211 is another heifer producing an outstanding calf on her first go-round. This Marbling EPD is the highest of any bull this year, if you are looking for a sire for a grass-fed beef program.

Our #1 bull coming off test, by far - yearling weight 1307 off of dry summer range and high roughage winter ration - nearly 50 pounds higher than any other bull on test. Lana K093 is coming eleven, has never missed, with every calf above average and seven of those calves weaning at 126, 116, 116, 114, 131, 139, 115; followed by yearling ratios of 113, 112, 114, 110, 124, 126, and Lot 2 at 121. High Marbling and Ribeye EPD. X810 is triple Lana in his pedigree.

Beckton Julian B571 produces one herd bull after another throughout the breed, and Lot 4 is an outstanding specimen. He is one of Mitch's top overall picks from all of our bulls for phenotype. His performance numbers are outstanding across the board - from a super-low Maintenance Energy to very high Marbling, Ribeye and Stayability, and everything in between.

The Yearling Heifers

The Beckton cowherd is a complete package of genetics for today's industry - moderately sized, efficient producers. They combine calving ease, growth, and desirable carcass traits. They are feminine, maternal and quiet, with nice udders. All of our heifer calves trailed up with their mothers into the Bighorn Mountains to spend their first summer. They have learned the meaning of mothering ability. And they have the productive ability to produce bulls of this quality for our sale. We have included heifers from the very top of our replacements.

We are also pleased to have a nice set of heifers from Tongue River Red Angus. These heifers are selected

with a similar philosophy, and carry a large influence of Beckton breeding. Both the Tongue River and the Beckton heifers have received a vaccination for leptovibrio this spring, but have not had MGA or other additives to suppress heat and influence gains. They have been through a complete breeding soundness exam, and are cycling and ready to breed.

We can keep any sale heifers and breed them in natural service to the same herd sires we use with our own heifers. There will be a charge of \$250 per heifer plus delivery at cost in the fall. Visit with Cam or Forest.

Special Offer

Beckton is offering 2 straws of semen from any Beckton sire (for which we have adequate supply) to go with each Beckton heifer purchased. Tongue River likewise is offering two straws of any Tongue River sire, for each Tongue River heifer purchased. We can still offer semen on Nebula P707, but Julian B571 and LT151 are not available. The buyer will only be responsible for shipping costs from Billings, Mt. The buyer may use the semen on any animal he or she chooses.

Reference Sires

The goal for Beckton's program has always been to develop breeding seedstock which offer increased levels of performance for the commercial cattleman. Increased performance does not mean maximizing weight and size, which have already reached the upper limit of economic

value for the packer and consumer. It does, however, mean increasing performance related to calving percentage and weaning percentage; and increasing performance related to cow maintenance requirements and "pounds of calf per acre" efficiency.

EPD Accuracies and Possible Change

EPDs are predictions, not true values, and we can therefore expect that EPDs will change from sire evaluation, as more information (i.e. progeny data) is included. A possible change value is an estimate of the amount of change (in trait units) that can be expected for a given EPD.

Technically, there is a 68% chance that the real genetic value (an EPD with a accuracy of 1.0) for any trait lies between its EPD plus its possible change value and its EPD minus its possible change value. For example, if a sire has a weaning EPD of +25 lb. and a possible change value of 10 lb., we can expect the true genetic value to be between +15 lb. (25 - 10) and +35 lb. (25 + 10) 68% of the time. We should not be surprised if his EPD in next year's evaluation is as high as +35 or as low as +15. If next year's EPD should happen to be slightly outside of this

range, keep in mind there is nearly a one-in-three chance of that happening; however, significantly larger deviations can occur.

Possible change is simply another way of expressing accuracy of an EPD. High accuracy sires will have small possible changes and vice versa. Many breeders feel that possible change values complement accuracies and help them determine just how thoroughly an animal has been evaluated. The accuracy/possible change chart lists possible changes in EPDs that can be expected with different levels of accuracy for the various traits.

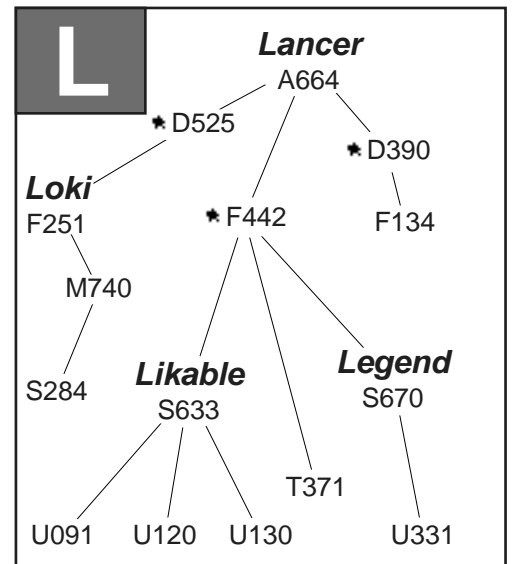

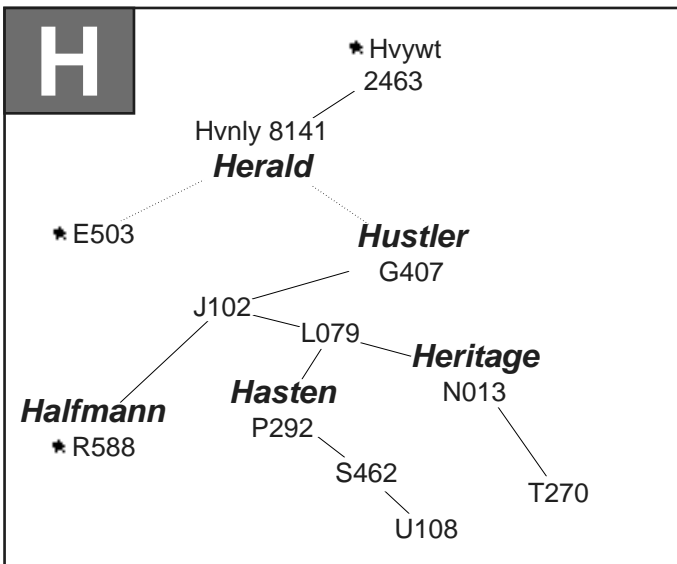

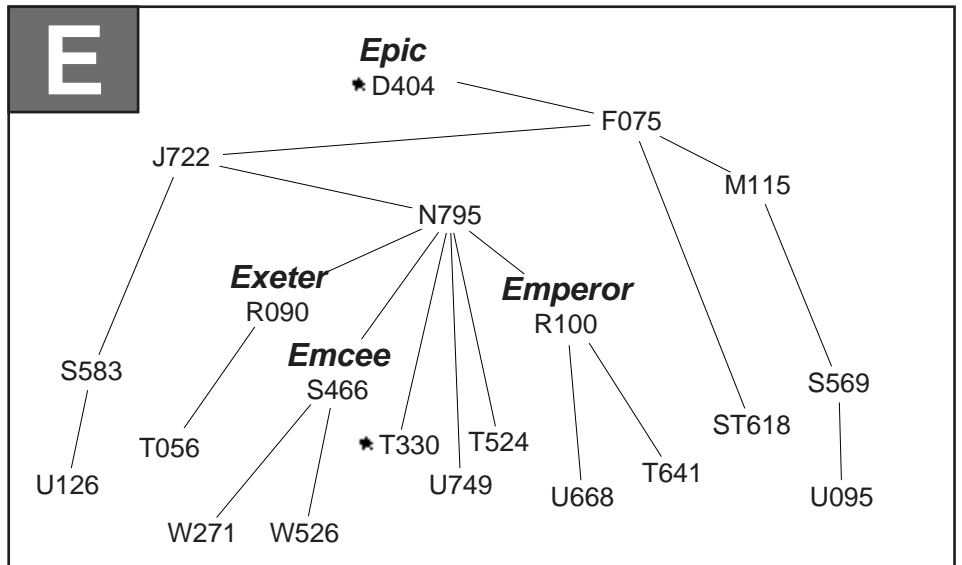

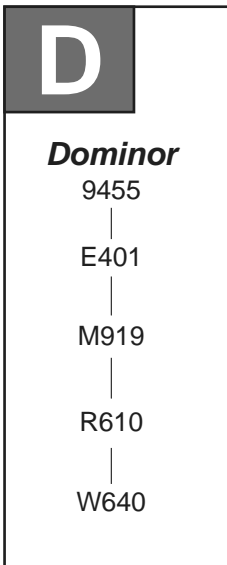

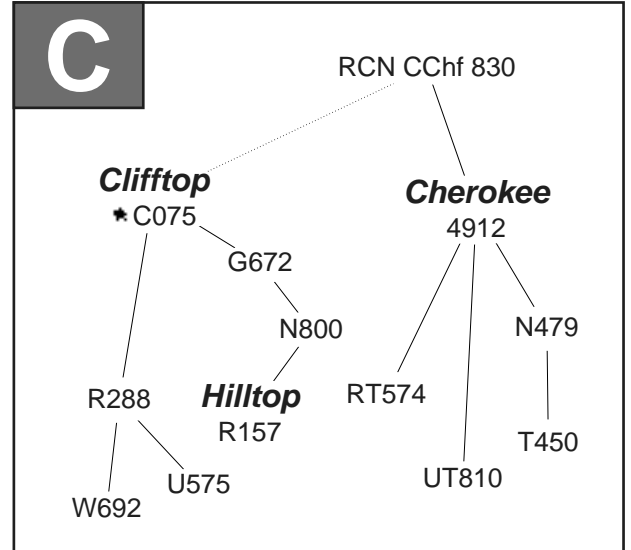

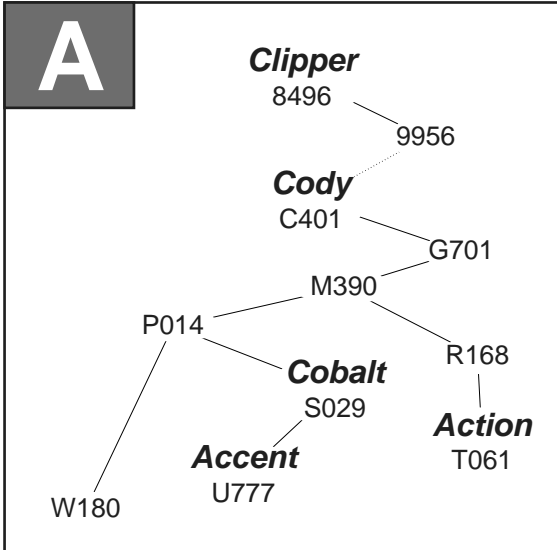

For more information on possible change values, please see the article by Dr. Bob Hough titled "Understanding EPD Accuracies and Possible Change". This article can be downloaded from the Red Angus Association of America website at www.redangus.org.

Sale Terms and Conditions

Except for those stated in the terms and conditions below, there are no warranties, either expressed or implied, as to the merchantability or fitness for a particular purpose with respect to the cattle being sold at this auction. The warranties and guarantees set forth in the "Terms and Conditions" are in lieu of all other warranties, either expressed or implied, and the remedies provided therein shall be the sole and exclusive remedy for the Buyer, or any party claiming through Buyer, for any breach of warranty or guarantee therein provided, and all other obligations or liabilities.

The information in the catalog is believed to be accurate, and the information seller believes to be most representative. It is the nature of seller's business that the seller engages in a continual process of collecting new data and information. Therefore, any information presented at the time of sale is always subject to revision, correction or update.

I. BIDDING

The Auctioneer in charge will settle any disputes as to bids, and his decision on such matters shall be final.

II. TERMS

Terms of sale are cash or personal check unless satisfactory credit arrangements have been made with vendor prior to sale.

III. PURCHASER'S RISK

Each animal becomes the risk of the purchaser as soon as sold, but it shall be the obligation of the Seller to see that animals are fed and cared for free of charge to purchaser, until loaded for shipment or until the expiration of 48 hours after the sale, whichever occurs sooner.

IV. DELIVERY

For any animals for which seller's arrange delivery, the following terms shall apply. Each animal becomes the risk of the purchaser as soon as sold, and through the time of delivery. The seller will arrange transportation and delivery schedules, and may combine animals from one or more purchasers for convenience and to reduce costs. If delivery is arranged, seller assumes no other liability. Once the purchaser has been notified of the date and approximate time of delivery (morning, afternoon, evening, etc.), it is the responsibility of the purchaser to arrange adequate and agreeable location and facilities for unloading each animal. When unloaded at the agreed upon location, all care and management of the animal is the responsibility of the purchaser.

V. CERTIFICATE OF REGISTRY

A transferred certificate of registry will be furnished to the purchaser for each animal sold as 'Registered'.

VI. HEALTH

All animals are eligible for interstate shipment, except as otherwise announced. Interstate health papers will be furnished for each animal requiring T.B. and Bang's tests in accordance with Federal Regulations.

VII. A.I. NON-OWNER BULL PERMITS

A.I./Non-owner Bull Permits shall be furnished by the Seller, at no cost to the Buyer, for all females bred artificially or naturally to bulls not owned by the Seller.

VIII. ANNOUNCEMENTS

Any changes from information of any kind in this catalog will be announced from the auction box and such announcements shall take precedence.

IX. BREEDING GUARANTEE

Any female that has had a calf prior to the date of sale shall be considered a breeder without further guarantee. All females sold as 'bred' or 'pregnant' have been pregnancy checked by a licensed veterinarian and are guaranteed bred on the day of sale. The purchaser may elect to have any female so listed rechecked at their cost within 30 days of delivery by a licensed veterinarian of their choice. Any such female determined open by this recheck may be returned to the seller for a full refund. Due to conditions out of seller's control, once a female leaves seller's possession, this is the only guarantee offered.

All bulls are sold as guaranteed breeders. Each bull has been officially fertility tested as "Satisfactory Breeder" prior to the sale. However, seller cannot guarantee against physical injury or illness following the sale. But if within 8 months following the sale, the buyer has evidence that the animal is not a breeder, the buyer may obtain a statement signed by a licensed veterinarian to that effect, such statement also indicating that there has been no injury or illness to the animal following the sale, and return the bull to the farm of the seller for adjustment. If the seller cannot then prove the animal to be a breeder, an adjustment will be made by the seller, either by substituting an animal of equal value, or by the refund of the full purchase price. Such adjustment shall be considered full settlement and satisfaction of all claims. No guarantees apply to animals which are shown following the sale.

X. GENETIC DEFECT AND PARENTAGE GUARANTEE

For complete rules and regulations in regard to genetic defects or parentage guarantee contact the RAAA. Ask for Section C Registration Requirements.

Osteopetrosis: The Red Angus Association along with animal scientists have developed a DNA marker test for osteopetrosis (OS), a genetic disorder which in rare instances can cause the loss of a calf at birth. Since the test was developed, Beckton has tested every sire being used in our breeding program. Only one sire, from outside our program, tested positive as a carrier of the gene. Every sire bred and raised at Beckton has tested 'Free'. All of our major semen sires have also been tested 'Free'. We guarantee every sale animal to be OS Free, and if you have a concern, we will have any sale animal tested on request. If an animal were to test positive, we would replace the animal or refund the purchase price. The testing we have done shows no incidence of occurrence in any Beckton bloodlines for the past 30 years, and so we believe there is no safer herd than ours.

XI. RETAINED INTEREST AND SEMEN RIGHTS:

Buyer receives full possession and salvage value of all bulls in the sale, unless stated otherwise in the catalog or during the auction. Buyer also has the sole privilege to determine if or when the bull is to have semen collected at any time in the future. Seller retains a 1/3 semen interest only on all sale bulls. On such bulls which are collected in the future, seller will have the privilege of receiving semen for in house use, sharing pro rata in the costs of collection of such semen. On such bulls from which semen is advertised or marketed commercially, seller is entitled to 1/3 royalty interest on gross semen sales, with buyer receiving 2/3 of gross sales. However, as stated any decision to collect or sell semen is solely the right of the buyer.

XII. RIGHTS AND OBLIGATIONS

A. The above terms and conditions of sale shall constitute a contract between the Buyer and Seller of each animal and shall be equally binding upon both. Each sale or resale of an animal constitutes a separate transaction.

B. Neither the sale manager, the owner, nor any other person connected with the management of the sale, assumes any liability, legal or otherwise.

★★★★★ for Low Maintenance, Rib-eye area, High Cow Efficiency, Calving Ease, Stayability.

B571 and P707 are the two premier sires in the Red Angus breed, offering the best of all traits for which our program is known. Semen is rare and will not be on the market going forward. At this time we are offering four packages of 10 straws each, for choice of these sires, or split between them, as follows:

The purchaser of any Beckton bull in this sale will have the option to exchange the bull bought in the ring, for the same price, for the buyer's choice of one of these four packages. The buyer must notify the auctioneer before the next bull is sold that the buyer wants to take this semen option. The buyer should also specify which semen he is selecting to ensure that his choice of semen is reserved. The auctioneer will then re-auction the bull in the ring.

There are only 15 straws total available for B571, so if the buyer wants B571 it is important that be specified in the ring. Once the 15 straws of B571 have been claimed, his semen will no longer

be an option. There are 30 straws available for P707. However, once any four option packages totaling 40 straws have been exercised, any further option terminates and will no longer be available through the remainder of the sale.

Note: We will also offer as an alternative 15 straws of BKT Julian 7526G, Reg#173525, sire of B571, one of the greatest sires ever at Beckton and one of the highest Stayability sires in the Red Angus breed. Note also that if the choice of semen is not specified in the ring, the buyer may choose later, but only from semen not taken by other buyers.

Option on Tongue River bulls:

There is one rare semen package available on TR Julian LT151, Reference Sire J-8, a top B571 son whose semen is no longer on the market. The buyer of any Tongue River bull in the sale has the option to take this semen package in the same manner as above, with the bull in the ring being re-auctioned. When this LT151 package is taken, no further semen option is available on TRRA bulls.

FIRST CLASS

Special Feature – Semen Packages on Rare Sires

We are offering semen packages on two of the most in-demand sires in the breed – Beckton Julian B571 and Beckton Nebula P707. Details inside.

LOWEST FEED REQUIREMENT

Beckton is the #1 herd for Low Maintenance Energy requirements, with the lowest average Cow Maintenance EPD of any major herd. Seven of the top ten sires in the breed for lowest Maintenance Energy are Beckton sires, more than all other herds combined.

RAPID GROWTH TO MARKET

Beckton bulls are leaders in total birth-to-market rate of growth. The average bull in this sale goes from -3.6 pounds at birth (BWE PD) to +55 pounds at yearling (YWE PD).

EASIEST CALVING

Beckton is also the #1 herd for easy calving, with the best average Calving Ease EPD of any major herd. Eight of the top ten sires in the breed for low Birth Weight EPD are Beckton sires.

DISPOSITION, FERTILITY, ALTITUDE ADAPTATION

Plus 66 years of selection for functionality – good dispositions, high cowherd fertility, good udders and milk. Our cattle rotate between Wyoming range and high elevations in the Bighorn Mountains, so they offer excellent altitude adaptation and strong feet and legs.

#1 HERD IN THE BREED FOR STAYABILITY !!

Six of the top ten sires in the entire breed for Stayability EPD are Beckton sires. High reproduction rate; cattle that work; traits that save you time and make you money. These are the cattle that stay in your herd when the others are gone.
