Sight-Unseen Purchase (by mail or phone)

If you are unable to attend the sale, we can help you select the bulls or females to fit your needs. Give us a phone call, letter, fax or e-mail (please refer to the back cover), and we can make arrangements to handle bidding according to your directions. Bulls are bought at the lowest price, and satisfaction is guaranteed on bulls purchased sight unseen. Many of our repeat customers buy their bulls this way.

To provide us adequate time to assist you, please contact us before noon of the day prior to the sale.

Free Delivery

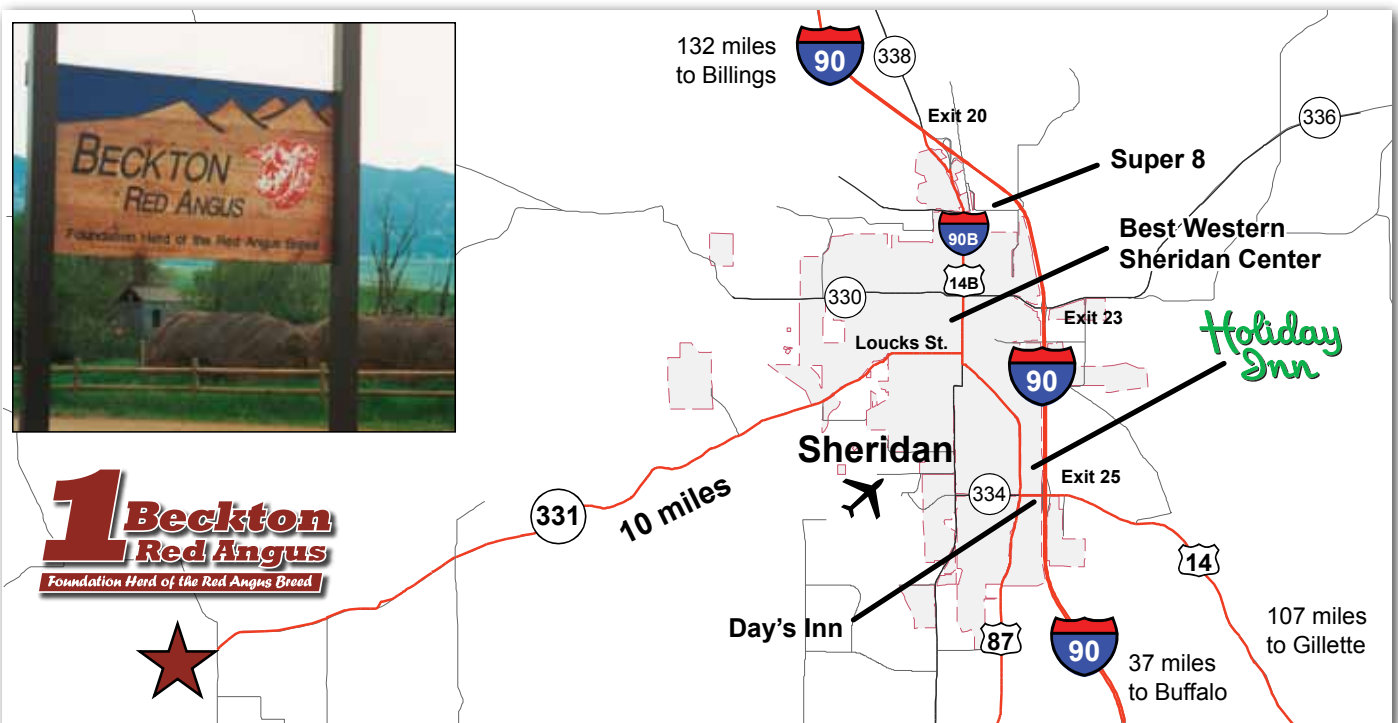

We pay for delivery for all bulls, as well as for purchases of 5 or more heifers to one location, throughout the continental U.S. If you bring a trailer to haul your own, \$50 will be deducted from the price of each bull or heifer. Most of the sale cattle will be delivered from 1-3 weeks after the sale, although we will try to accommodate special needs. Although there occasionally are limitations, in most cases we can deliver the cattle directly to your ranch.

All Bulls "Trich" Tested

In all the years we have been selling and delivering bulls, Beckton has never had a bull test positive for "trich". But because an increasing number of states require testing of yearling bulls, and to avoid any delay in delivery time, we will have all the sale bulls tested negative for "trich" prior to the sale. Customers from any state may also come to the sale with their trailer and load out directly after the sale.

Payment

Payments can be made with cash, check payable to Beckton Stock Farm, Inc. or Visa/Mastercard on sale day.

69th Anniversary Production Sale

Some Facts about the Beckton Herd

- ▶ **This is the #1 Herd in the breed for Stayability**, and has been for many years. **Fifteen of the top 20 sires for Stayability EPD** on the RAAA Sire Summary are either Beckton sires or descended from Beckton sires, as are 74 of the top 100 (out of 1574 Red Angus sires in the breed). These are the bulls and heifers that will be with you after the others are gone.
- ▶ **Beckton is also the #1 herd for easy calving, with the best average Calving Ease EPD** of any major herd. **Thirteen of the top twenty sires** in the breed for low Birth Weight EPD are Beckton sires. No other set of bulls will come close.
- ▶ **This has also been the #1 Herd in the breed for Low Maintenance Energy requirements** for many years. **Six of the top twenty sires** in the entire breed for lowest Maintenance Energy EPD are Beckton sires. No other set of bulls will do a better job cutting your cowherd maintenance requirement and saving you feed and money.
- ▶ **Beckton bulls are leaders in total rate of growth, from birth to market weight.** The average birth weight EPD of these sale bulls is minus -4.0, and the average yearling weight EPD is plus 80. **No other set of bulls will start with such low birth weight and reach such a high yearling weight – for marketability and for less time and cost to market.**

TOTAL PERFORMANCE IN THE MOST ECONOMICALLY IMPORTANT TRAITS

High reproduction rate; high calving rate; less time and cost to market weight; and lower total feed inputs and feed costs. Plus 69 years of selection for the convenience traits – good dispositions – cowherd fertility – good udders and milk – and structurally sound cattle well adapted to both high elevation and dry range conditions.

BECKTON BULL AND HEIFER WARRANTY

Optional protection against injury or death, plus Pregnancy coverage for heifers

BULLS: Injury or loss protection coverage - If your bull is permanently injured or dies any time up to 5 months after purchase, you will receive a credit toward purchase of another bull in the amount of the original purchase price minus salvage. The cost is 5% of the purchase price paid at settlement (eg. \$150 for a \$3,000 bull).

HEIFERS: Injury or loss protection plus Pregnancy Guarantee – likewise good for 5 months after purchase. If your heifer fails to become pregnant when exposed to a bull who settles 75% of the other heifers in the same pasture; or in the event your heifer is permanently injured or dies, you will receive a credit toward purchase of another heifer in the amount of the original purchase price minus any salvage. The cost is 10% of the purchase price paid at settlement (eg. \$200 for a \$2,000 heifer).

Serving our customers for 69 years with industry leading genetics and the highest quality cattle.

Additional Sale Information

- ▶ The animals sell in catalog order. We will have a conference call available for telephone bidding. You must register in advance, and conference number and instructions will be available then.
- ▶ All bulls have passed a rigorous fertility exam that included live semen evaluation, scrotal measurements, and reproductive tract examinations.
- ▶ Beckton has a comprehensive herd-wide health program which includes vaccinations for 7-Way, IBR, BVD, PI3, BRSV, Lepto, and ivermectin. The heifers are also vaccinated for bangs and vibrio.
- ▶ When a genetic test was developed by RAAA for osteopetrosis (OS), Beckton tested every sire in use in our program, as well as our major AI sires. Every Beckton bred sire (nearly 80 in total) tested OS Free.
- ▶ We plan to have semen collected on some of the bulls before the sale. We will also work with the buyer to collect bulls after the sale.
- ▶ Beckton's focus has always been on the commercial market. From our earliest sales over 40 years ago, we have retained a 1/3 semen interest on every bull sold through our sales. This policy has been for the benefit of our commercial customers, who are not in the business of selling semen. Buyers at our sale have not had to compete with AI companies when they bid for their choice of bulls. This policy continues with this sale, and unless otherwise designated in the catalog or by the auctioneer, or other arrangements made, the following terms, restated from the terms and conditions, apply to all bulls in the sale:

Buyer receives full possession of the bull, and income from future sale of the animal itself. Buyer also has the sole privilege to determine if and when a bull is collected in the future. Seller retains a 1/3 semen interest on all sale bulls, including the privilege of in-herd use. If a bull is collected in the future, we would like to be notified so we may obtain semen, sharing pro-rata in the collection cost. On bulls from which semen is marketed commercially in the future, seller is entitled to a 1/3 royalty interest on gross semen sales, with buyer receiving 2/3 of gross sales.

This policy helps make every bull in our sale, from Lot 1 on, equally accessible to all of our customers, as well as giving the buyer full possession and control.

▶ **Special Rare Semen Option for BECKTON JULIAN B571 and BECKTON NEBULA P707:**

These are two premier sires in the Red Angus breed, offering the best of all traits for which our program is known. Semen is very limited and not on the market. We are offering a special semen package for each. Details are given on the inside back cover.

Jane Redding

We are both pleased and sad to announce that Jane Redding has retired after nearly 40 years at Beckton. She has been keeping our records accurately and doing many other things as well, as those of you who have met her or spoken to her over the telephone are well aware. She has moved back to Pennsylvania to be with her family, and we wish her nothing but the best.

1 Beckton Red Angus

37 Beckton Drive • Sheridan, WY 82801 • becktonwyo@gmail.com
Office: 307.674.6095 • Evenings: 674.8162 • Fax: 674.8162

Dear Friends and Cattlemen,

On behalf of everyone here at Beckton, we welcome you to join us for our 69th Anniversary Production Sale. We have our best offering of Red Angus bulls and heifers ever, and hope you will take the opportunity to visit and see them. Following the sale, please join us at a complimentary roast beef dinner at the Holiday Inn.

The future of the beef industry looks very good. Cattle prices are strong, but there is no expansion in the nation's beef cow inventory. We are unlikely to see cheap corn again in the future, so cattle that are productive and functional, while being low cost and efficient, will be desirable now and for years ahead.

Beckton has the leading genetics in the industry to reduce maintenance requirements. This is leading herd for low cow maintenance energy EPD, and this is best sale for finding large numbers of bulls with low maintenance energy genetics. But these cattle also produce – the average yearling weight EPD of this year's sale bulls is +80, the highest ever.

We believe in bulls that work on both heifers and cows, so we need moderate birth weights and live calves on the ground, as much as weaning and yearling weight. This year's sale bulls have an average birth weight EPD of -4.1. The overall gain from 0 to 365 days is the highest we have ever had for a sale offering.

Finally, this is the breed's leading herd for Stayability. 15 out of the highest 20 sires in the breed for Stayability EPD, are Beckton sires or descended from Beckton sires. As are 74 of the top 100. About three out of every four top Stayability animals in the Red Angus breed comes from Beckton genetics. Sustained fertility, calving ease, low maintenance and growth – these are the cattle that stay in the herd.

We recently went through the bulls once more to produce our video, and they look fantastic – thickness and soundness throughout the offering. There will be a sale video up on our website shortly. Lastly, Beckton has never had a positive test for "trich", but because so many more states are requiring it, we have tested all the bulls 'trich negative' ahead of the sale, so there will be no concern on your part or delay in delivery.

Our heifer offering is smaller than past years because Forest and Sue Dunning have retired and we no longer have Tongue River cattle with us. However the heifers we did select for the sale come from the top end of Beckton's replacements. They are functional and feminine, and will make beautiful and moderate sized brood cows. These are the females that go on to produce the upper end of the bulls you see in the sale.

Again, please join us for the sale and for dinner afterward. If we can help you in any other way, we will do our best.

Cam and Trish Forbes

Sincerely,

Cam Forbes

Beckton Red Angus • Since 1945
The Foundation Herd of the Red Angus Breed

The Beckton Program

Cow Size

The goal for Beckton's program has always been to develop breeding seedstock which offer increased levels of performance for the commercial cattleman. Increased performance does not mean maximizing weight and size, which have already reached the upper limit of economic value for the packer and consumer. It does, however, mean increasing performance related to calving percentage and weaning percentage; and increasing performance related to cow maintenance requirements and "pounds of calf per acre" efficiency.

Size Matters

Beckton cattle are already big enough for the consumer and the packer. Using yearling weight EPD as the best available indicator of market size, the average for our sale bulls is +80, about the same as the Red Angus breed average, so for market size our cattle are directly comparable.

The big difference with Beckton's program is that we select for additional weaning and yearling weight, but with the restriction that we have maintained the same cow size over time. In contrast, the industry has allowed cow size to increase at the same rate as calf size. Cow size is the largest factor determining maintenance requirements. Our goal has been to increase efficiency, not size. No other seedstock breeding program has had such a goal and maintained it for so long.

Beckton Cow Weight Average (lb.)

Year	1978	1982	1986	1990	1994	1998	2002	2006	2010	2012
Wt.	1,126	1,126	1,064	1,115	1,067	1,125	1,104	1,093	1,068	1,100

(mature lactating cows taken at weaning)

Cow weights vary from year to year depending on grass, weather or other short term factors. But overall our cow size has stayed fairly constant over time.

The Industry Problem

As shown on the graph on the next page, industry-wide cow size has increased substantially, 25% over this same period. But look at the industry-wide trend in feed use per cow over the same period, shown by the use of hay:

Industry Hay Use (tons/animal unit)

Year	1978	1982	1986	1990	1994	1998	2002	2006	2010
Hay Usg.	1.43	1.62	1.91	2.00	1.94	1.99	2.08	2.05	2.08
Pct.	100%	113	134	140	136	140	146	143	146

(Src.: USDA Econ. Research Service, 2010 is newest available data)

Industry-wide, production per cow is up about 25% since the 1970s, but hay consumption per cow is up more than 40%.

Why does hay use increase at a faster rate than cow size or production per cow? Hay and grain are supplements to the cow's main diet, which is grass, and grass supply is relatively fixed by environment. Each increase in cow feed requirement must be met entirely by supplements, or by a combination of supplement and reduced stocking rate. A small increase in cow feed requirement leads to a reduction in stocking rate or a large increase in higher-cost, supplemental feed needs.

Any gains achieved in the feedlot sector due to increased animal growth, have been overwhelmed by increased cost of production in the cow-calf sector.

Efficiency

35 Years of Change: Industry-Wide

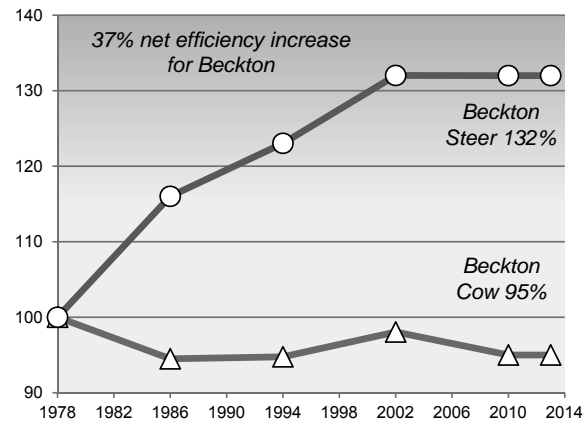

The graph at left shows how, for the U.S. cattle industry overall, the increase in average calf weights, as measured by steer slaughter weights, has been directly matched by an increase in average cow weights. (Percentages are based on USDA slaughter weight data for steers and cows respectively, using 1978 as a base year. Data for heifers slaughtered shows an identical trend.) Over 35 years, there has been minimal change in overall cowherd efficiency.

This graph shows the failure of cross-breeding and composite breeding to do little more than simply increase general cattle size. In the promotion of composites, the impact of retained heterosis on mature weight is too often ignored. Crossbreeding and composites are sold as a free lunch, but they aren't free.

We have accomplished this by selecting for growth, restricting birth weight and cow size creep, and multiplying each incremental change rapidly throughout our entire cowherd and all of our bloodlines. Usually this has meant working within our own bloodlines rather than introducing out-crosses, because the outside genetics for the direction we wanted to go haven't been available. The overall key to success is simply that we have been making small progress in multiple traits, but doing it consistently over a very long period of time.

35 Years of Change: Beckton

The graph at right shows Beckton cowherd data over the same time period.

1. Beckton cow size has shown no significant change over the past 35 years, while the industry has experienced a substantial increase in cow size.
2. Even without increasing cow size, we have raised the rate of early growth in Beckton cattle, using intense genetic selection and generation turnover, and by more than the rest of the industry.
3. The net change in efficiency as measured simply by "calf weight divided by cow weight" is significantly higher with Beckton's genetic program, compared to mainstream cross-breeding based on retained heterosis.

Management

One Bull – the Simple Solution is the Best Solution

Many cattlemen use Beckton bulls for their heifers because of their low birth weights and high calving ease. Our bulls are even better when used on cows, because replacement heifers tend to be selected from calves out of older cows. **Keeping replacement heifers sired by Beckton bulls is the quickest way to limit cow size creep and to moderate cow size for the future.** In our own program we use the same bulls on both heifers and cows. Every bull is used his first year with heifers to evaluate calving ease, and used in future years with older cows. We get calving ease, growth, and moderate-sized replacements, all with the same bull.

Quietness and Ease of Handling

The necessity of record keeping means that our cattle will be handled much more than commercial cows. **This benefits our seedstock customers because our cattle will be quieter and easier to handle.** Good disposition is one of our most valued traits.

Selection for Industry Requirements

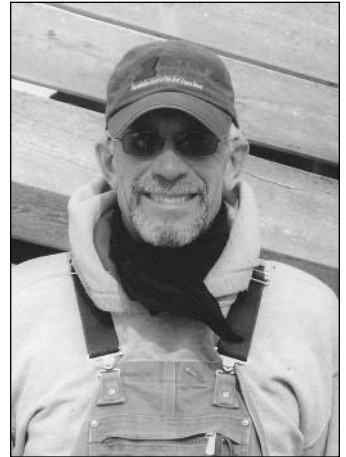

In order to make selection decisions appropriate to the commercial beef industry, seedstock cattle need to be managed and measured under conditions which will approximate the commercial industry. **Our cows are run entirely on grass, with hay only if weather conditions require it, because that is how the commercial industry runs cows.** However, almost all commercial calves go into feedlots before slaughter, so feedlot performance and efficiency is an important trait for calves. **Simply put, a producer needs to know how his cows perform on grass, and how his calves perform with feed.**

Our bulls are run on a performance test designed to provide the fairest basis of comparison among them, and

this requires a compromise. Our bulls receive a “growing” ration high in roughage and protein and not as high in energy as a steer would receive. **We want to get a good measure of gainability with which to compare bulls, but we don’t want the bulls fat.**

Craig Uden, Darr Feeders Manager
Photo courtesy of the Lexington Clipper-Herald

Mitch Ziebell, Darr Feeders

Mitch Ziebell, Craig Uden of Darr, NE

Since 1979 all of our bulls have been performance tested at a facility owned and managed by the Kugler family near Cozad, Nebraska. In the fall of 2005, Lane Kugler retired and the operation was bought by a neighboring operation – Darr Feeders. The overall operation is managed by Craig Uden, with the bulls under the daily management of Mitch Ziebell. **We have been very impressed with the conscientious care with which Mitch oversees all aspects of the bull management.**

Additional Facts about the Beckton Program

Birth weight

- ▶ Every sire entering our own program is used first on our own heifers, then on our cows.
- ▶ We have never used high birth weight sires in any part of our program, so big birth weights are rare.
- ▶ We get the pay weight, but with lower birth weights and greater calving ease.
- ▶ Full production from heifers. We use the same bulls on heifers and cows.

Growth

- ▶ Weaning efficiency, and rate of gain to slaughter weight second to none.
- ▶ Growth traits must be consistent with maintaining maternal qualities.
- ▶ Beckton cattle are ideally sized for today's packer demand.

Hardiness

- ▶ Every cow in the herd has spent part of her life in the Big Horn Mountain summer range, at elevations from 7000 to 10,500 feet.
- ▶ In 2001 we PAP tested all of our herd sires. The herd average PAP score was 32.5 at 4000', equivalent to a herd average PAP of 39 at 8000' (excellent scores).
- ▶ By the time she is 5, our average cow will have been trailed over 80 miles, above and beyond normal pasture rotation.

Efficiency

- ▶ The typical dam of our bulls weans over 50% of her body weight in 205 days, under range conditions, with no creep-feeding.
- ▶ The average dam produces over 100% of her own body weight in a year.
- ▶ The average mature cow (age 5+) weighs about 1100-1125 pounds.

Fertility

- ▶ Every bull in our program is used in natural service, with 30-50 heifers/cows.
- ▶ Every cow in our program must cycle naturally and breed early under range conditions.

Value

- ▶ Beckton Red Angus produce more growth without high birth weights.
- ▶ They are the one-bull solution that can be used on both heifers and cows.
- ▶ Carcass quality is an extra benefit.

Reliability

- ▶ Beckton has been genetically improving Red Angus since 1945, a 30-60 year lead time over other producers.
- ▶ It is a complete, genetically sound breeding program, which demands whole-herd performance.

Beckton History

Sal keeping records.

Waldo Forbes - 1st President of the Red Angus Association.

Beckton house/office before being moved in 1905 to its current location. This house was built in the 1880s by George Beck, the original homesteader. The antlers are still on the porch, and it is one of the oldest buildings in Sheridan County.

The Waldo Forbes family in 1959: Ellen, Julia, Sal, Sarah, Cherry,, Spike, and Cam & Elfie in front.

Inspection Committee at Beckton (1954), including George and Vernice Chiga, Sal and Waldo Forbes and Spike.

Beckton Larkabeau O "220" in 1959 - the 1st Red Angus Bull at ABS

Mrs. Waldo (Sal) Forbes was honored as the first woman inducted into the Saddle and Sirloin Club's portrait gallery in Louisville, KY.

Using New Selection Tools

Maintenance EPD

This EPD predicts the relative feed energy requirement for maintenance, for cows produced by a sire or female. A bull with an ME of -3 (minus 3) is expected to sire replacement daughters which will need 10 fewer mcals of energy per month than a bull with an ME of +7.

We believe this is an important EPD because feed costs, both direct and indirect through ranch overhead, make up by far the largest proportion of operating costs. It can have much more direct impact on ranch profitability than Marbling or Ribeye EPD for example.

The Beckton herd has been one of the breed's top herd for low maintenance energy requirements for many years.

Calving Ease

The Red Angus Calving Ease EPD was introduced in 2003, and is a more direct measure of calving ease than birth weight alone. Calving Ease is defined as follows: "The expected differences of calving ease measured as the probability difference (between sires) of unassisted calvings among offspring." For Calving Ease EPD, the higher number is better.

There are two Calving Ease EPD's - "Direct", a predictor of an animal's own offspring; and "Maternal", a predictor of a daughters calving ease. Unless stated otherwise, we publish the Calving Ease Direct because most of our customers' primary concern is selecting bulls for use on first calf heifers.

Beckton's average Calving Ease EPD is +12, a full eight points higher than the the Red Angus breed average of 4, due to our long history of selection for moderate birth weights. **The average Beckton bull is in the top 4% of the entire breed for highest Calving Ease.**

Cow Efficiency

We present two indicators of efficiency. The first is Weaning Percent, a simple percentage of calf 205 day weight divided by the dam's actual weight at weaning. The second is PRI Cow Efficiency. This also measures calf weaning weight, but relative to the cow's metabolic weight, and is expressed as an index above or below 100.

These efficiency measures are best used as indicators of where an animal is relative to others, rather than directly for selection. For example, if we see an animal with a low efficiency, we would look at the actual calf and cow weights to decide if the calf is too small, or the cow too big for the environment. That in turn will suggest corrective actions. In general, select for the traits you need to change to make cattle more efficient, and efficiency will be the result.

Beckton has been performance tested selection since 1945, and we believe our cattle today are the most efficient in the industry.

Dam Information

A major difference with our catalog is the greater amount of information about the dams we provide. Weaning percent and Cow Efficiency are explained above. In addition, with each sale animal we give the dam's age when this calf was born, and the dam's actual weight when the calf was weaned the previous fall. We also provide her progeny averages – the average birth weight, weaning ratio, and yearling ratio – of her calves.

The Bulls

Our bulls are managed in a manner to gain important performance data and information, and equally importantly, to develop and provide our customers with many years of productive service. We have been testing breeding bulls over 50 years, longer than almost any other producer. Our own breeding is based primarily on natural service, not AI, so we see how our bulls work in the pasture. We use bulls raised and managed just this way, with our own cows and heifers, on every kind of terrain, and high in the Bighorn Mountains.

For the first twenty years our bulls were tested at home here in Wyoming. They received some grain, but otherwise grass pasture and dry hay. In 1979 we moved our test to a facility managed by the Kugler family in Cozad, Nebraska, where the bulls got a ration including silage, corn and protein. When we brought our first bulls home from Kuglers' and used them with our own cowherd, we discovered a dramatic increase in libido and breeding performance. The effect of proper

nutrition was apparent, and the bulls would maintain condition and hold up better through the entire breeding season. We have continued managing our bulls at the same facility ever since (now managed by Craig Uden), and we continue to see the same benefits.

We have since used over 500 of these bulls natural service in our own breeding program, on dry range and in the mountains, and have never had a bull fall out of our program early due to his feeding or testing management. Beckton Julian B571, Lancer F442, Nebula M045, Nebula P707, and all of our other great sires were fed and managed in Cozad. While it is possible to feed bulls improperly under any structure, we would strongly question those who promote the notion of any advantage to "forage-raised" bulls. Every year we see the results and success of our bull management program, and we serve many satisfied customers.

Mitch Ziebell has taken care of our bulls for many years, and works with them throughout the year. We ask him to evaluate the bulls for phenotype. Julian A434 was one of his very top picks this year. With his high yearling weight and low maintenance EPD, A434 is Lot 1. His Lakme dam is a 5 year old with an excellent progeny record, and his granddam has produced 10 calves for us.

Beckton New Era Y194 is probably the best new young sire we have ever produced at Beckton. A409 was one of our highest bulls on test this winter, and is potentially one of the best bulls ever in our sale. He is a linebred Nebula M045 and another of Mitch's top picks for phenotype. He also received a top score of 10 for Tenderness genes on Igenity's DNA profile. We would like to collect semen from several of these herd bull prospects after the sale if the buyers are willing, and A409 would definitely be one to collect.

Epic sires are making a name for themselves at in both registered and commercial herds, and at AI services. Lot 3 combines growth with exceptional calving ease potential. His dam is going on eight years of age and has calved every year in the first two and a half weeks of the calving season. The two grand-dams have produced 18 calves for us!! Fertility is probably the most valuable trait of all.

Another New Era son with outstanding phenotype and performance records. He offers excellent phenotype and a tremendous spread from birth to yearling. His dam, Lana S742, was singled out from our herd and purchased by Kerry Sheaman, and you can see from her progeny averages what a cow she is. Both grand-dams are also in the very upper part of the herd. Lot 4 was also one of a few bulls DNA profiled this winter, and he received the top score of 10 for Tenderness.

Top sires usually come from outstanding dams. If you look back through our catalogs you will Tamara cows appearing frequently with sons at the front of the sale. This dam is no exception, with a very high progeny record. A293 is Julian top and bottom in the pedigree and has the phenotype to go with his performance records.

Accent 180 has risen up from one of our less well known sire lines, to be what I believe is one of our top half dozen herd sires overall in our program. This Accent was a high pick of Mitch's for phenotype. We only got DNA gene profiles on a few of our bulls, in connection with parentage verification. Lot 7 was one of these, and he received a 10 (the highest score) for Tenderness genes on Igenity's DNA profile.

Another Tamara dam with a son at the front of a sale. Tamara T11 had one of her five calves that got sick and weaned poorly – otherwise her progeny averages would be high. This grandson of Nebula M045 (the ABS bull) was very strong at both weaning and yearling, as well as phenotype at both weaning and yearling. Yet he is one of the lowest Maintenance Energy sire prospects in the breed.

Epic A159 has to stand out as just a top all-around sire prospect. Low Maintenance Energy; high Calving Ease; high Yearling Weight; good Marbling and Rib-Eye Area EPD's. An Igenity DNA gene score of 10 for Tenderness genes. And he is out of what could be the highest performing dam in our herd. Vernice (a cow line that goes way back, named after Vernice Chiga) N598 has had nine calves, with no misses, and every calf with a weaning ratio from 104 up to 117.

The Yearling Heifers

Beckton females are nearly ideal for today's industry – moderately sized, efficient producers. They combine calving ease, growth, and desirable carcass traits. They are feminine, maternal and quiet, with nice udders and sound feet. All of our heifer calves trailed up with their mothers into the Bighorn Mountains to spend their first summer. They have learned the meaning of mothering ability. And they have the productive capacity to produce

the bulls that you see in our sale. The sale heifers are a select group from the top of our replacements.

If you wish, we can also keep any sale heifers through the summer and breed them in natural service to the same herd sires we use with our own replacements. There will be a charge of \$250 per heifer plus delivery at cost in the fall. Visit with Cam about this program.

Heifer pregnancy and loss warranty
OPTIONAL WARRANTY
See page 1 for more details.

Special Offer

Beckton is offering two straws of semen from any of our sires (for which we have adequate supply) to go with each heifer purchased. For P707 semen we are only able to offer one straw, and B571 is not available. The buyer will only be responsible for shipping from Billings, MT. The buyer may use the semen on any animal they would like.

Reference Sires

The goal for Beckton's program has always been to develop breeding seedstock which offer increased levels of performance for the commercial cattleman. Increased performance does not mean maximizing weight and size, which have already reached the upper limit of economic

value for the packer and consumer. It does, however, mean increasing performance related to calving percentage and weaning percentage; and increasing performance related to cow maintenance requirements and "pounds of calf per acre" efficiency.

EPD Accuracies and Possible Change

EPDs are predictions, not true values, and we can therefore expect that EPDs will change from sire evaluation, as more information (i.e. progeny data) is included. A possible change value is an estimate of the amount of change (in trait units) that can be expected for a given EPD.

Technically, there is a 68% chance that the real genetic value (an EPD with a accuracy of 1.0) for any trait lies between its EPD plus its possible change value and its EPD minus its possible change value. For example, if a sire has a weaning EPD of +25 lb. and a possible change value of 10 lb., we can expect the true genetic value to be between +15 lb. (25 - 10) and +35 lb. (25 + 10) 68% of the time. We should not be surprised if his EPD in next year's evaluation is as high as +35 or as low as +15. If next year's EPD should happen to be slightly outside of this

range, keep in mind there is nearly a one-in-three chance of that happening; however, significantly larger deviations can occur.

Possible change is simply another way of expressing accuracy of an EPD. High accuracy sires will have small possible changes and vice versa. Many breeders feel that possible change values complement accuracies and help them determine just how thoroughly an animal has been evaluated. The accuracy/possible change chart lists possible changes in EPDs that can be expected with different levels of accuracy for the various traits.

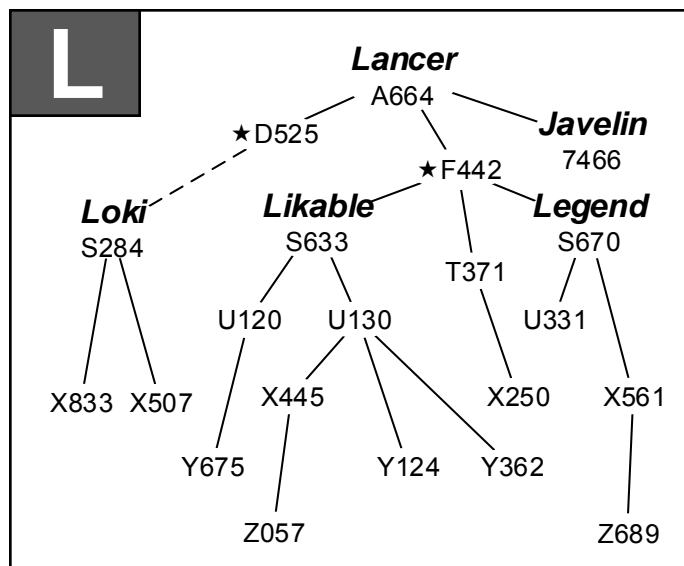

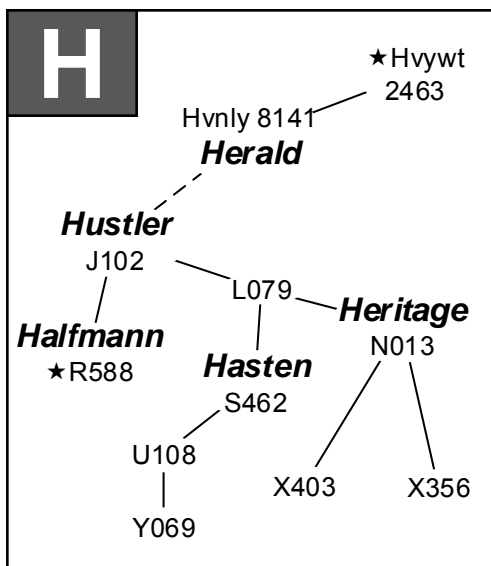

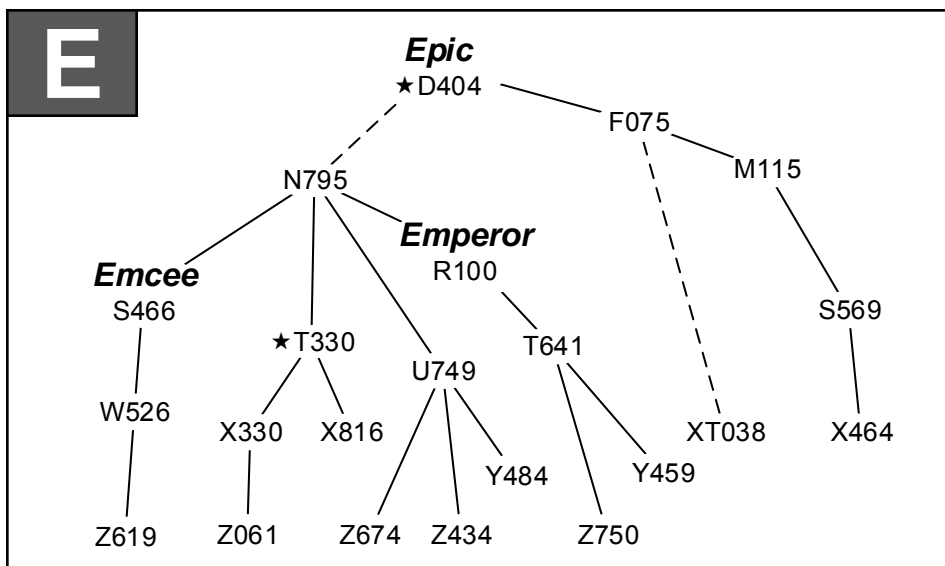

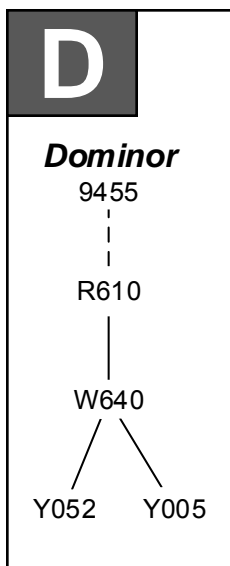

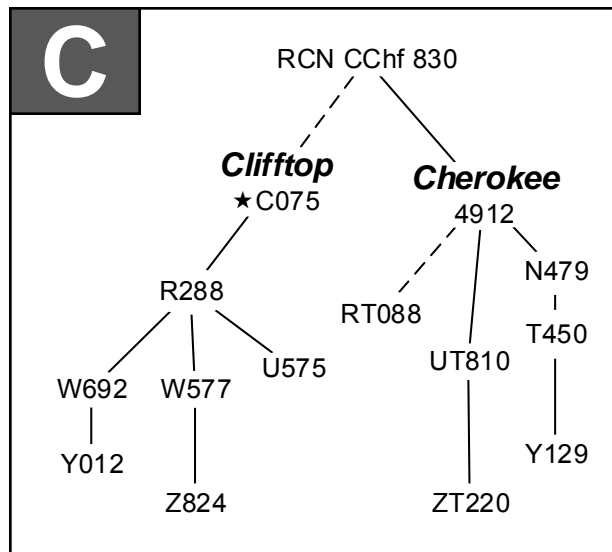

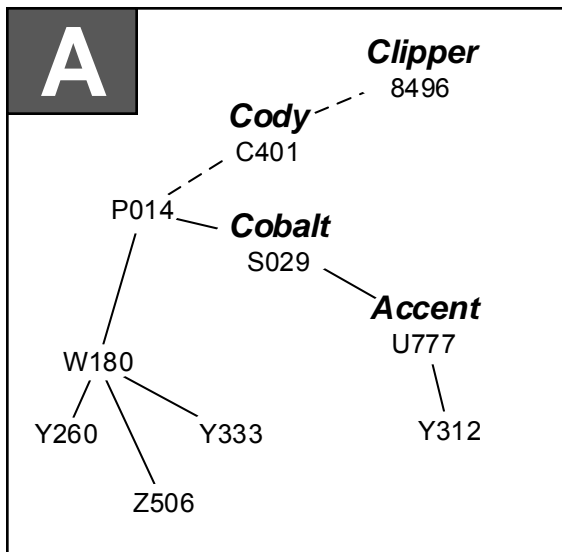

For more information on possible change values, please see the article by Dr. Bob Hough titled "Understanding EPD Accuracies and Possible Change". This article can be downloaded from the Red Angus Association of America website at www.redangus.org.

Sale Terms and Conditions

Except for those stated in the terms and conditions below, there are no warranties, either expressed or implied, as to the merchantability or fitness for a particular purpose with respect to the cattle being sold at this auction. The warranties and guarantees set forth in the "Terms and Conditions" are in lieu of all other warranties, either expressed or implied, and the remedies provided therein shall be the sole and exclusive remedy for the Buyer, or any party claiming through Buyer, for any breach of warranty or guarantee therein provided, and all other obligations or liabilities.

The information in the catalog is believed to be accurate, and the information seller believes to be most representative. It is the nature of seller's business that the seller engages in a continual process of collecting new data and information. Therefore, any information presented at the time of sale is always subject to revision, correction or update.

I. BIDDING

The Auctioneer in charge will settle any disputes as to bids, and his decision on such matters shall be final.

II. TERMS

Terms of sale are cash or personal check unless satisfactory credit arrangements have been made with vendor prior to sale.

III. PURCHASER'S RISK

Each animal becomes the risk of the purchaser as soon as sold, but it shall be the obligation of the Seller to see that animals are fed and cared for free of charge to purchaser, until loaded for shipment or until the expiration of 48 hours after the sale, whichever occurs sooner.

IV. DELIVERY

For any animals for which seller's arrange delivery, the following terms shall apply. Each animal becomes the risk of the purchaser as soon as sold, and through the time of delivery. The seller will arrange transportation and delivery schedules, and may combine animals from one or more purchasers for convenience and to reduce costs. If delivery is arranged, seller assumes no other liability. Once the purchaser has been notified of the date and approximate time of delivery (morning, afternoon, evening, etc.), it is the responsibility of the purchaser to arrange adequate and agreeable location and facilities for unloading each animal. When unloaded at the agreed upon location, all care and management of the animal is the responsibility of the purchaser.

V. CERTIFICATE OF REGISTRY

A transferred certificate of registry will be furnished to the purchaser for each animal for which a Registration number is listed.

VI. HEALTH

All animals are eligible for interstate shipment, except as otherwise announced. Interstate health papers will be furnished for each animal requiring T.B, Bang's, and trich tests in accordance with federal and state regulations.

VII. DIVISIBILITY

The percentage of ownership interest received by the buyer, whether it is 100% or 2/3 or otherwise as defined in the catalog or by the auctioneer, may not be subsequently divided without the express written consent of the seller.

VIII. ANNOUNCEMENTS

Any changes from information of any kind in this catalog will be announced from the auction box and such announcements shall take precedence.

IX. BREEDING GUARANTEE

Any female that has had a calf prior to the date of sale shall be considered a breeder without further guarantee. All females sold as 'bred' or 'pregnant' have been pregnancy checked by a licensed veterinarian and are guaranteed bred on the day of sale. The purchaser may elect to have any female so listed rechecked at their cost within 30 days of delivery by a licensed veterinarian of their choice. Any such female determined open by this recheck may be returned to the seller for a full

refund. Due to conditions out of seller's control, once a female leaves seller's possession, this is the only guarantee offered.

All bulls are sold as guaranteed breeders. Each bull has been officially fertility tested as "Satisfactory Breeder" prior to the sale. However, seller cannot guarantee against physical injury or illness following the sale. But if within 8 months following the sale, the buyer has evidence that the animal is not a breeder, the buyer may obtain a statement signed by a licensed veterinarian to that effect, such statement also indicating that there has been no injury or illness to the animal following the sale, and return the bull to the farm of the seller for adjustment. If the seller cannot then prove the animal to be a breeder, an adjustment will be made by the seller, either by substituting an animal of equal value, or by the refund of the full purchase price. Such adjustment shall be considered full settlement and satisfaction of all claims. No guarantees apply to animals which are shown following the sale.

X. GENETIC DEFECT AND PARENTAGE GUARANTEE

For complete rules and regulations in regard to genetic defects or parentage guarantee contact the RAAA. Ask for Section C Registration Requirements.

Osteopetrosis: The Red Angus Association along with animal scientists have developed a DNA marker test for osteopetrosis (OS), a genetic disorder which in rare instances can cause the loss of a calf at birth. Since the test was developed, Beckton has tested every sire being used in our breeding program. Only one sire, from outside our program, tested positive as a carrier of the gene. Every sire bred and raised at Beckton has tested 'Free'. All of our major semen sires have also been tested 'Free'. We guarantee every sale animal to be OS Free, and if you have a concern, we will have any sale animal tested on request. If an animal were to test positive, we would replace the animal or refund the purchase price. The testing we have done shows no incidence of occurrence in any Beckton bloodlines for the past 30 years, and so we believe there is no safer herd than ours.

XI. RETAINED INTEREST AND SEMEN RIGHTS:

Buyer receives full possession and salvage value of all bulls in the sale, unless stated otherwise in the catalog or during the auction. Buyer also has the sole privilege to determine if or when the bull is to have semen collected at any time in the future. Seller retains a 1/3 semen interest only on all sale bulls. On such bulls which are collected in the future, seller will have the privilege of receiving semen for in house use, sharing pro rata in the costs of collection of such semen. On such bulls from which semen is advertised or marketed commercially, seller is entitled to 1/3 royalty interest on gross semen sales, with buyer receiving 2/3 of gross sales. However, as stated any decision to collect or sell semen is solely the right of the buyer.

XII. RIGHTS AND OBLIGATIONS

A. The above terms and conditions of sale shall constitute a contract between the Buyer and Seller of each animal and shall be equally binding upon both. Each sale or resale of an animal constitutes a separate transaction.

B. Neither the sale manager, the owner, nor any other person connected with the management of the sale, assumes any liability, legal or otherwise.

★★★★★ for Low Maintenance, Marbling, Rib-eye area, High Cow Efficiency, Calving Ease, Stayability.

Beckton Julian B571 and **Beckton Nebula P707** have been premier sires of the breed over the past decade. We are offering semen packages of 10 straws each for these two sires – one package for B571 and five packages for P707 – as follows:

The purchaser of any bull in this sale has the option to exchange the bull bought in the ring, for the same price, for the buyer's choice of one of these packages. The buyer must notify the auctioneer before the next bull is sold that the buyer wants to take a semen package option, and on which sire. The auctioneer will then re-auction the bull in the ring.

FIRST CLASS

#1 HERD IN THE BREED FOR STAYABILITY, LOW MAINTENANCE and CALVING EASE

Of 1574 total sires on the 2014 RAAA Sire Summary, 74 of the highest 100 sires for STAYABILITY EPD are either Beckton sires or descended from Beckton sires. As are 15 of the highest 20.

THESE ARE THE CATTLE THAT STAY IN YOUR HERD.

Plus 69 years of selection for functionality – good dispositions, high cowherd fertility, good udders and milk. Our cattle rotate between Wyoming range and high elevations in the Bighorn Mountains, so they offer excellent altitude adaptation, strong feet and legs, and overall structural soundness.
