71  
YEARS

# 1 Beckton Red Angus

37 Beckton Drive • Sheridan, WY 82801 • [becktonwyo@gmail.com](mailto:becktonwyo@gmail.com)  
Office: 307.674.6095 • Evenings: 674.8162 • Fax: 672.7281

Dear Friends and Cattlemen,

On behalf of everyone here at Beckton, we welcome you to join us for our 71st Anniversary Production Sale. The Red Angus breed is becoming the breed of choice for commercial beef producers, and we believe Beckton has the right kind of Red Angus cattle for profitability into the future.

The Red Angus Association's Herd Builder Index is now being used across the breed as a statistical predictor of profitability. This Index takes the multiple traits of economic importance – fertility, calving ease, low maintenance, stayability, growth, carcass traits, etc. – which we now measure with individual EPD's, and weights each trait according to its relative economic importance. Every animal receives an Index number, which is a straightforward measure of dollar profitability for each mating of that animal.

To explain this simply with actual numbers, the average Herd Builder Index for all animals in the Red Angus breed under 2 years of age is 104. The average Index for Beckton's 251 yearling bulls in this sale is just over 150. The difference between these Index numbers (150-104) equals 46, so statistically the Index predicts that the average Beckton bull in this sale mated to random females will generate just over \$46 more profit per mating. Mated to 150 females over his service lifetime, the average Beckton bull in this sale should produce about \$7,000 more profit than the average bull in the breed.

The traits now being measured breed-wide by the Herd Builder Index are the same traits for which Beckton has been selecting over the past seven decades. Beckton's herd sires rank at the top of the breed, and this carries forward in our new young bulls. You will see looking through the sale bulls that most rank in the top breed percentiles. (The sale bull average of 150 is in the top 7 % of the breed.) And this advantage continues as you retain replacement heifers from these bulls and use these genetics to build your cowherd into the future.

When you see them we think you will agree this is an outstanding offering of young bulls. The heifers are likewise really nice – selected from the top end of our heifer replacements. They are feminine and functional and ready to breed. We offer two straws of semen with each heifer from any of our herd sires for which we have an adequate quantity, including Nebula P707.

Again we welcome you to join us for our 71th Anniversary Sale, with a dinner served at the Holiday Inn immediately after. We have a new air service, Key Lime Air, with really nice jet aircraft and two daily flights to and from Denver. See the contact info on page 2 or on the last page.

Lastly, if you are unable to attend, this year we are offering bidding through Superior Productions on the internet (see the last page of this catalog). We will continue to offer our Conference call for bidding, or you may call me in the days ahead of the sale to visit about the bulls and place a Sight-Unseen order. Over a quarter of our bulls sell sight unseen, mostly to long-time customers.

We put a lot of work into selecting the bulls and heifers for the sale, and as always, your satisfaction with every animal is guaranteed. We look forward to seeing you on Tuesday the 12th.

Sincerely,

*Cam Forbes*

*Cam and Trish Forbes*

# Sale Information

## Beckton Ranch

9½ miles West of Sheridan

Phone: 307.674.6095

**Tuesday, April 12th, 2016**

1 o'clock pm (Lunch at noon)

## 251 Bulls • 31 Heifers

Selling in catalog order, heifers sell following the bulls

Please join us for a complimentary dinner after the sale at the Holiday Inn.

## Some Facts about the Beckton Herd

**HERD BUILDER INDEX:** The new HERDBUILDER INDEX developed by the RAAA, and now used throughout the breed (see pages 8-9), weights EPD's according to their effect on overall herd profitability. **42 of the 50 highest ranking sires in the Red Angus breed for profitability are Beckton sires or descended from Beckton sires.**

The 251 Beckton sale bulls inside this catalog have an average Herd Builder Index of 150, which is in the top 7% of the entire breed. Statistically the Beckton bulls will produce \$46 more profit per mating compared to other Red Angus bulls. **Mated to 150 randomly selected females over his service lifetime, the average Beckton bull in this sale should produce about \$7,000 more profit from your cow herd. And the dividend continues as replacement females are retained into the future.**

► **HERD STAYABILITY:** Beckton is the #1 Herd in the breed for Stayability, and has been for many years. **44 of the top 50 sires in the breed for Stayability EPD are Beckton sires or descended from Beckton sires**, including 17 of the top 20. These are the bulls and heifers that will produce, breed back, and stay in your herd for many years.

► **LOW MAINTENANCE ENERGY:** Beckton has also been the #1 Herd for Low Maintenance Energy requirements for many years. 5 of the top 10 sires in the entire breed for lowest Maintenance Energy EPD are Beckton sires. **No other set of bulls will do a better job cutting your cowherd feed requirements.**

► **EASY CALVING:** The #1 Herd in the breed for easy calving, with the best average Calving Ease EPD of any major herd. 6 of the top 10 sires in the breed for low Birth Weight EPD are Beckton sires. **The average Calving Ease EPD of all 251 sale bulls is +13, which is the top 2 % of the Red Angus breed.**

► **GROWTH RATE from Birth to Market:** No other set of sale bulls offer this volume of bulls which combine low birth weight and easy calving, with high growth rate to market weight, together with fertility and stayability. **And no other set of sale bulls will combine all of these traits and rank so high on overall herd profitability measured by the Herd Builder Index.**

## Sale Details

### Internet Bidding via Superior Productions

Internet bidding and phone bidding are now available with Superior Productions. See more information on page 2 and complete details on the last page of the catalog.

### Conference Call Buying

For those who cannot attend the sale and would like to listen and bid over the phone, two Conference call lines will be available. Call the ranch number above well ahead of the sale and we will register you for the conference call and give you call-in instructions and a buyer number.

### Site-Unseen Purchase

If you are unable to attend the sale, we can help you select the bulls or females to fit your needs. Give us a phone call, letter, fax or e-mail (please refer to the back cover), and we can make arrangements to handle bidding according to your directions. Bulls are bought at the lowest price, and satisfaction is guar-

anteed on bulls purchased sight unseen. Many of our repeat customers buy their bulls this way. To provide us adequate time to assist you, please contact us before noon of the day prior to the sale.

### Free Delivery

We provide free delivery for all bulls throughout the continental U.S. If you bring a trailer to haul your own, \$200 will be deducted from the price of each bull. Heifers will be delivered free within 400 miles, and at cost for additional miles. Most of the sale cattle will be delivered from 1 to 3 weeks after the sale, although we will try to accommodate if you need your bulls right away. Although there occasionally are limitations, in most cases we can deliver the cattle directly to your ranch.

### Payments

Payments can be made with cash, check payable to Beckton Stock Farm, Inc. or Visa/Mastercard on sale day.

## Additional Sale Information

- ▶ The animals sell in catalog order. We will have a conference call available for telephone bidding. You must register in advance, and conference number and instructions will be available then.
- ▶ All bulls have passed a rigorous fertility exam that included live semen evaluation, scrotal measurements, and reproductive tract examinations.
- ▶ Beckton has a comprehensive herd-wide health program which includes vaccinations for 7-Way, IBR, BVD, PI3, BRSV, Lepto, and ivermectin. The heifers are also vaccinated for bangs and vibrio.
- ▶ When a genetic test was developed by RAAA for osteopetrosis (OS), Beckton tested every sire in use in our program, as well as our major AI sires. Every Beckton bred sire (nearly 80 in total) tested OS Free.
- ▶ We plan to have semen collected on some of the bulls before the sale. We will also work with the buyer to collect bulls after the sale.
- ▶ Buyer receives full possession and one half semen interest in all the bulls in the catalog. Seller is retaining one half interest in all bulls in the catalog. This is done so we can use some of the bulls in herd and reserve the right to collect and market semen on these bulls. Any collection on our behalf would be at our expense and could be done during the off-season and at the convenience of the buyer. The buyer would have the option to share in the collection and retain semen for the buyer's use also. If semen is marketed by either party, Seller receives one half royalty interest on gross semen sales, and buyer receives one half interest. Regardless of semen collection and marketing, the buyer retains full possession, full pasture use rights, and full salvage value in these bulls.
- ▶ Payments can be made with cash, check payable to Beckton Stock Farm, Inc. or Visa/Mastercard on sale day.

### All Bulls "Trich" Tested

In all the years we have been selling and delivering bulls, Beckton has never had a bull test positive for "trich". But because an increasing number of states require testing of yearling bulls, and to avoid any delay in delivery time, we will have all the sale bulls tested negative for "trich" prior to the sale. Customers from any state may also come to the sale with their trailer and load out directly after the sale.

### BECKTON BULL AND HEIFER WARRANTY

Optional protection against injury or death, plus Pregnancy coverage for heifers

**BULLS:** Injury or loss protection coverage - If your bull is permanently injured or dies any time up to 5 months after purchase, you will receive a credit toward purchase of another bull in the amount of the original purchase price minus salvage. The cost is 5% of the purchase price paid at settlement (eg. \$150 for a \$3,000 bull).

**HEIFERS:** Injury or loss protection plus Pregnancy Guarantee – likewise good for 5 months after purchase. If your heifer fails to become pregnant when exposed to a bull who settles 75% of the other heifers in the same pasture; or in the event your heifer is permanently injured or dies, you will receive a credit toward purchase of another heifer in the amount of the original purchase price minus any salvage. The cost is 10% of the purchase price paid at settlement (eg. \$200 for a \$2,000 heifer).

### Video of sale animals is available on our website, [www.BecktonRedAngus.com](http://www.BecktonRedAngus.com)

Lots with small square "QR code" barcodes similar to the one at left have video available to view on your iPhone, Android, Blackberry, or Windows Phone. Simply Scan the code with a free downloadable barcode reader app and you can view video footage of the animal right on your phone screen.

**Don't have the app? Don't worry!** Simply visit your phone's App Store and search for a "QR Code" app. There are lots of free apps available; "i-nigma" is one that works well on all platforms. If you can't get your phone to work you can still watch all of the videos online using a computer.

# The Beckton Program

## Cow Size

The goal for Beckton's program has always been to develop breeding seedstock which offer increased levels of performance for the commercial cattleman. Increased performance does not mean maximizing weight and size, which have already reached the upper limit of economic value for the packer and consumer. It does, however, mean increasing performance related to calving percentage and weaning percentage; and increasing performance related to cow maintenance requirements and "pounds of calf per acre" efficiency.

### Size Matters

Beckton cattle are already big enough for the consumer and the packer. Using yearling weight EPD as the best available indicator of market size, the average for our sale bulls is +80, about the same as the Red Angus breed average, so for market size our cattle are directly comparable.

The big difference with Beckton's program is that we select for additional weaning and yearling weight, but with the restriction that we have maintained the same cow size over time. In contrast, the industry has allowed cow size to increase at the same rate as calf size. Cow size is the largest factor determining maintenance requirements. Our goal has been to increase efficiency, not size. No other seedstock breeding program has had such a goal and maintained it for so long.

### Beckton Cow Weight Average (lb.)

Year	1978	1982	1986	1990	1994	1998	2002	2006	2010	2015
Wt.	1,126	1,126	1,064	1,115	1,067	1,125	1,104	1,093	1,068	1,126

(mature lactating cows taken at weaning)

Cow weights vary from year to year depending on grass, weather or other short term factors. But overall our cow size has stayed fairly constant over time.

### The Industry Problem

As shown on the graph on the next page, industry-wide cow size has increased substantially, 32% over this same time period...hay use per cow has increased by more than 36% from 1978 to 2013, from 1.43 tons per animal unit to 1.95 tons. Cow size has increased by about 32% since the 1970's and production per cow is up about 30%, but hay use per cow is up more than 36%.

Industry-wide, production per cow is up about 25% since the 1970s, but hay consumption per cow is up more than 40%.

Why does hay use increase at a faster rate than cow size or production per cow? Hay and grain are supplements to the cow's main diet, which is grass, and grass supply is relatively fixed by environment. Each increase in cow feed requirement must be met entirely by supplements, or by a combination of supplement and reduced stocking rate. A small increase in cow feed requirement leads to a reduction in stocking rate or a large increase in higher-cost, supplemental feed needs.

Any gains achieved in the feedlot sector due to increased animal growth, have been overwhelmed by increased cost of production in the cow-calf sector.

## The Beckton Crew...

Roger Zier

Shelby Whitman

# Efficiency

The graph at left shows how, for the U.S. cattle industry overall, the increase in average calf weights, as measured by steer slaughter weights, has been directly matched by an increase in average cow weights. (Percentages are based on USDA slaughter weight data for steers and cows respectively, using 1978 as a base year. Data for heifers slaughtered shows an identical trend.) Over nearly 40 years, there has been minimal change in overall cowherd efficiency.

This graph shows the failure of cross-breeding and composite breeding to do little more than simply increase general cattle size. In the promotion of composites, the impact of retained heterosis on mature weight is too often ignored. Crossbreeding and composites are sold as a free lunch, but they aren't free.

We have accomplished this by selecting for growth, restricting birth weight and cow size creep, and multiplying each incremental change rapidly throughout our entire cowherd and all of our bloodlines. Usually this has meant working within our own bloodlines rather than introducing out-crosses, because the outside genetics for the direction we wanted to go haven't been available. The overall key to success is simply that we have been making small progress in multiple traits, but doing it consistently over a very long period of time.

The graph at right shows Beckton cowherd data over the same time period.

1. Beckton cow size has shown no significant change over the past nearly 40 years, while the industry has experienced a substantial increase in cow size.
2. Even without increasing cow size, we have raised the rate of early growth in Beckton cattle, using intense genetic selection and generation turnover, and by more than the rest of the industry.
3. The net change in efficiency as measured simply by "calf weight divided by cow weight" is significantly higher with Beckton's genetic program, compared to mainstream cross-breeding based on retained heterosis.

## Management

### One Bull – the Simple Solution is the Best Solution

Many cattlemen use Beckton bulls for their heifers because of their low birth weights and high calving ease. Our bulls are even better when used on cows, because replacement heifers tend to be selected from calves out of older cows. **Keeping replacement heifers sired by Beckton bulls is the quickest way to limit cow size creep and to moderate cow size for the future.** In our own program we use the same bulls on both heifers and cows. Every bull is used his first year with heifers to evaluate calving ease, and used in future years with older cows. We get calving ease, growth, and moderate-sized replacements, all with the same bull.

### Quietness and Ease of Handling

The necessity of record keeping means that our cattle will be handled much more than commercial cows. **This benefits our seedstock customers because our cattle will be quieter and easier to handle.** Good disposition is one of our most valued traits.

### Selection for Industry Requirements

In order to make selection decisions appropriate to the commercial beef industry, seedstock cattle need to be managed and measured under conditions which will approximate the commercial industry. **Our cows are run entirely on grass, with hay only if weather conditions require it, because that is how the commercial industry runs cows.** However, almost all commercial calves go into feedlots before slaughter, so feedlot performance and efficiency is an important trait for calves. **Simply put, a producer needs to know how his cows perform on grass, and how his calves perform with feed.**

Our bulls are run on a performance test designed to provide the fairest basis of comparison among them, and

this requires a compromise. Our bulls receive a “growing” ration high in roughage and protein and not as high in energy as a steer would receive. **We want to get a good measure of gainability with which to compare bulls, but we don’t want the bulls fat.**

*Craig Uden, Darr Feeders Manager*  
Photo courtesy of the Lexington Clipper-Herald

*Mitch Ziebell, Darr Feeders*

### Mitch Ziebell, Craig Uden of Darr, NE

Since 1979 all of our bulls have been performance tested at a facility owned and managed by the Kugler family near Cozad, Nebraska. In the fall of 2005, Lane Kugler retired and the operation was bought by a neighboring operation – Darr Feeders. The overall operation is managed by Craig Uden, with the bulls under the daily management of Mitch Ziebell. **We have been very impressed with the conscientious care with which Mitch oversees all aspects of the bull management.**

## Additional Facts about the Beckton Program

### Birth weight

- ▶ Every sire entering our own program is used first on our own heifers, then on our cows.
- ▶ We have never used high birth weight sires in any part of our program, so big birth weights are rare.
- ▶ We get the pay weight, but with lower birth weights and greater calving ease.
- ▶ Full production from heifers. We use the same bulls on heifers and cows.

### Growth

- ▶ Weaning efficiency, and rate of gain to slaughter weight second to none.
- ▶ Growth traits must be consistent with maintaining maternal qualities.
- ▶ Beckton cattle are ideally sized for today's packer demand.

### Hardiness

- ▶ Every cow in the herd has spent part of her life in the Big Horn Mountain summer range, at elevations from 7000 to 10,500 feet.
- ▶ In 2001 we PAP tested all of our herd sires. The herd average PAP score was 32.5 at 4000', equivalent to a herd average PAP of 39 at 8000' (excellent scores).
- ▶ By the time she is 5, our average cow will have been trailed over 80 miles, above and beyond normal pasture rotation.

### Efficiency

- ▶ The typical dam of our bulls weans over 50% of her body weight in 205 days, under range conditions, with no creep-feeding.
- ▶ The average dam produces over 100% of her own body weight in a year.
- ▶ The average mature cow (age 5+) weighs about 1100-1125 pounds.

### Fertility

- ▶ Every bull in our program is used in natural service, with 30-50 heifers/cows.
- ▶ Every cow in our program must cycle naturally and breed early under range conditions.

### Value

- ▶ Beckton Red Angus produce more growth without high birth weights.
- ▶ They are the one-bull solution that can be used on both heifers and cows.
- ▶ Carcass quality is an extra benefit.

### Reliability

- ▶ Beckton has been genetically improving Red Angus since 1945, a 30-60 year lead time over other producers.
- ▶ It is a complete, genetically sound breeding program, which demands whole-herd performance.

# Separating science from politics & marketing

## Red Angus unveils reliable, unbiased indices

by Larry Keenan, Director of Breed Improvement

The Red Angus Association of America (RAAA) implements a unique approach when developing genetic selection tools. In order to deliver the most reliable and unbiased data to Red Angus stakeholders, RAAA separates sound science from subjective politics and marketing.

RAAA achieves this through implementation of a non-political Technical Committee, which is populated by non-Board members and actually has decision-making powers regarding genetic predictions.

Once the technical committee is provided an assignment – such as developing economic selection indices – it is tasked with overseeing development and ultimately deciding if the tool – or index in this case – is dependable enough to release to stakeholders. While this process may slow the release of a new EPD or index, commercial producers can have confidence that once the tool is released, it is reliable.

Red Angus' work on economic selection indices provides an excellent example of the importance of such committee structure. RAAA previously had the ability to release an index; however, Technical Committee review revealed flaws in the proposed index that essentially caused it to be a marketing tool as opposed to a selection tool.

After multiple refinements to the index development software, RAAA is excited to announce that the Technical Committee has approved the release of the HerdBuilder and GridMaster indices.

### What are Indices?

The purpose of an index (plural – indices) is to estimate differences in an operation's overall profitability resulting from a particular selection decision. In developing an index to evaluate differences in profitability within an operation, assumptions must be made regarding the genetics of the cowherd (ex: average weaning weight) as well as economic values (ex: sale price of cull cows).

RAAA utilized the Red Angus database to determine the required cowherd assumptions. The economic assumptions were derived from input obtained from CattleFax and economic data from Texas A&M and North Dakota State University. Additionally, certain basic

production assumptions are made, such as: Will the bulls be used on heifers and/or cows? Are replacement heifers retained? When and how are calves marketed?

Once these assumptions were determined, the data was fed into a simulation model that accounted for the segments of the beef industry based on the assumptions. Finally, EPDs of the service sires were included in the simulation model to determine the overall impact the sires would have on the operation's profitability.

The EPDs included in the index calculation are independently changed one unit (ex: Stayability EPD of 10 vs. 11), and the resulting change in overall profitability determines the weightings placed on each EPD. It is important to understand that these EPD weightings are not determined, or adjusted, using human perceptions. Thus, the weightings, and ultimately the indices, are completely based on science.

While the process of calculating an index is very complex, the resulting selection tool is very simple to implement. RAAA's indices will be expressed to stakeholders as differences in profitability per exposure. For example, Bull A has an index value of 100 and Bull B has an index value of 150, and the selected bull would be mated to 120 cows over the bull's productive lifespan. Selecting Bull B would add an additional \$6,000  $[(150 - 100) \times 120]$  in profitability to the operation as compared to selecting Bull A.

While Red Angus bulls are selected by stakeholders to fit into various production scenarios, selection pressure is typically placed on herd-building traits or traits that increase the value of marketed product. Many producers have even developed their own selection index to assist them in identifying bulls that meet these goals. Typically these include thresholds for certain EPDs, but as most would admit, these thresholds are not strictly followed. Red Angus' selection indices will provide producers with a consistent selection tool built on a scientific, unbiased foundation.

## HerdBuilder Index

As the name indicates, implementation of the HerdBuilder Index will assist producers in building profitable herds. The HerdBuilder Index is built using the following production scenario:

- ▶ Red Angus bulls mated to cows and heifers (resulting progeny  $\frac{3}{4}$  Red Angus,  $\frac{1}{4}$  Simmental)
- ▶ Replacement heifers retained from within the herd
- ▶ All remaining progeny sold on a quality-based carcass grid.

Given that replacement heifers are retained, significant influence is placed on the obvious maternal EPDs of Stayability, Heifer Pregnancy and Calving Ease. Additionally, with all remaining progeny sold on a quality-based carcass grid, Marbling, Yield Grade and growth EPDs impact the HerdBuilder index.

## GridMaster Index

While Red Angus has traditionally been known as a superior maternal breed, those who have retained ownership in Red Angus calves know of their potential to excel in the feedyard and ultimately hang a premium carcass.

Red Angus stakeholders will quickly recognize the term “GridMaster,” as the Marketing Department annually recognizes load lots of harvested cattle with superior carcass observations as “Grid Master” Award winners.

Producers who place emphasis on the GridMaster Index in their selection decisions will not only experience an increase in their operation’s profitability; but as well can expect to see an increased number of calves recognized as Grid Master Award winners.

The GridMaster Index is built using the following production scenario:

- ▶ Red Angus bulls mated to cows (resulting progeny  $\frac{3}{4}$  Red Angus,  $\frac{1}{4}$  Simmental)
- ▶ All progeny sold on a quality-based carcass grid.

Thus, Marbling, Yield Grade and growth EPDs are the traits of primary importance in the GridMaster Index.

## What if my Production Scenario is Different?

While your operation may differ from the above index scenarios, our research shows that the two above situations will serve as reliable selection tools for the vast majority of ranches.

Use the GridMaster Index if your operation’s primary goal is maximizing profitability of feeders in the feedyard and on the rail.

For example, if your operation matches the HerdBuilder Index, except you would be using the selected bull on cows only, this small difference would not cause a significant change in the ranking of animals.

During committee discussions, the Technical Committee explored creating an additional HerdBuilder-Cow Index, which would use the same scenario as the above HerdBuilder except the bulls would only be used on cows. In comparing the HerdBuilder vs. HerdBuilder-Cow indices, we found that bulls ranked essentially the same between the two indices.

To be exact, the rank correlation was 0.97, which can be interpreted as only 3 in 100 bulls changed rank between the HerdBuilder and HerdBuilder-Cow. Thus demonstrating the robustness of the HerdBuilder Index, in that your production scenario can slightly deviate from the exact scenario in which the HerdBuilder Index was built, and the HerdBuilder Index can still serve as a reliable selection tool.

A quick study of the HerdBuilder and GridMaster Indices reveals that the main difference between these two indices is the source of replacement heifers. If the selected sire will be used to produce replacement females, the HerdBuilder Index should be used. However, if the selected sire will not be used to generate replacements, the GridMaster Index should be used.

Red Angus’ unwavering implementation of science has provided the foundation for the delivery of genetic selection tools with unmatched reliability. This precedence was strictly followed in the development and delivery of Red Angus’ HerdBuilder and GridMaster indices. Thus, stakeholders can have confidence that these new tools are truly genetic selection tools, and not just a marketing tool.

# Beckton History

*Sal keeping records.*

*Waldo Forbes - 1st President of the Red Angus Association.*

*Beckton house/office before being moved in 1905 to its current location. This house was built in the 1880s by George Beck, the original homesteader. The antlers are still on the porch, and it is one of the oldest buildings in Sheridan County.*

*The Waldo Forbes family in 1959: Ellen, Julia, Sal, Sarah, Cherry, Spike, and Cam & Elfie in front.*

*Inspection Committee at Beckton (1954), including George and Vernice Chiga, Sal and Waldo Forbes and Spike.*

*Beckton Larkabeau O "220" in 1959 - the 1st Red Angus Bull at ABS*

*Mrs. Waldo (Sal) Forbes was honored as the first woman inducted into the Saddle and Sirloin Club's portrait gallery in Louisville, KY.*

## Using New Selection Tools

### HerdBuilder and GridMaster Indices

The new Red Angus Association HERDBuilder and GRIDMaster Indices are given for each sale animal, in the box just above the EPDs. The Index number is followed by the “Percentile” showing how that animal ranks compared to all other Red Angus bulls or heifers. A higher Index number results in a lower “Percentile” number, which means a higher ranking within the breed, and is therefore better. The development of these Indices by the RAAA is described in the article written by Larry Keenan and reprinted.

The familiar Birth Weight or Yearling Weight EPDs, for example, are measured in pounds of increase in weight, whereas these Indices are measured in ‘dollars of increase in profitability’ - the expected increase in profit that each animal is expected to generate per mating of that animal. A bull with a HerdBuilder Index of 160, compared to a second bull with an index of 110, should produce  $160 - 110 = 50$  dollars of expected increased profit for each cow to which he is mated, compared to the second bull (note that this is ‘per mating’, not ‘per calf produced’). The Index considers and weights all economic factors – fertility, calving ease, maintenance costs, growth rate, stayability, carcass quality, etc. - according to best available science,

You will find Beckton bulls individually and as a group ranking in the top of the breed for profitability, as measured by these new Indices.

### Maintenance EPD

This EPD predicts the relative feed energy requirement for maintenance, for cows produced by a sire or female. A bull with an ME of -3 (minus 3) is expected to sire replacement daughters which will need 10 fewer mcals of energy per month than a bull with an ME of +7.

We believe this is an important EPD because feed costs, both direct and indirect through ranch overhead, make up by far the largest proportion of operating costs. It can have much more direct impact on ranch profitability than Marbling or Ribeye EPD for example.

The Beckton herd has been one of the breed’s top herd for low maintenance energy requirements for many years.

### Calving Ease

The Red Angus Calving Ease EPD was introduced in 2003, and is a more direct measure of calving ease than birth weight alone. Calving Ease is defined as follows: “The expected differences of calving ease measured as the probability difference (between sires) of unassisted calvings among offspring.” For Calving Ease EPD, the higher number is better.

There are two Calving Ease EPD’s - “Direct”, a predictor of an animal’s own offspring; and “Maternal”, a predictor of a daughters calving ease. Unless stated otherwise, we publish the Calving Ease Direct because most of our customers’ primary concern is selecting bulls for use on first calf heifers.

Beckton’s average Calving Ease EPD is +12, a full eight points higher than the the Red Angus breed average of 4, due to our long history of selection for moderate birth weights. **The average Beckton bull is in the top 4% of the entire breed for highest Calving Ease.**

### Cow Efficiency

We present two indicators of efficiency. The first is Weaning Percent, a simple percentage of calf 205 day weight divided by the dam’s actual weight at weaning. The second is PRI Cow Efficiency. This also measures calf weaning weight, but relative to the cow’s metabolic weight, and is expressed as an index above or below 100.

These efficiency measures are best used as indicators of where an animal is relative to others, rather than directly for selection. For example, if we see an animal with a low efficiency, we would look at the actual calf and cow weights to decide if the calf is too small, or the cow too big for the environment. That in turn will suggest corrective actions. In general, select for the traits you need to change to make cattle more efficient, and efficiency will be the result.

**Beckton has been performance tested selection since 1945, and we believe our cattle today are the most efficient in the industry.**

### Dam Information

A major difference with our catalog is the greater amount of information about the dams we provide. Weaning percent and Cow Efficiency are explained above. In addition, with each sale animal we give the dam’s age when this calf was born, and the dam’s actual weight when the calf was weaned the previous fall. We also provide her progeny averages – the average birth weight, weaning ratio, and yearling ratio – of her calves.

# The Bulls

Our bulls are managed in a manner to gain important performance data and information, and equally importantly, to develop and provide our customers with many years of productive service. We have been testing breeding bulls over 50 years, longer than almost any other producer. Our own breeding is based primarily on natural service, not AI, so we see how our bulls work in the pasture. We use bulls raised and managed just this way, with our own cows and heifers, on every kind of terrain, and high in the Bighorn Mountains.

For the first twenty years our bulls were tested at home here in Wyoming. They received some grain, but otherwise grass pasture and dry hay. In 1979 we moved our test to a facility managed by the Kugler family in Cozad, Nebraska, where the bulls got a ration including silage, corn and protein. When we brought our first bulls home from Kuglers' and used them with our own cowherd, we discovered a dramatic increase in libido and breeding performance. The effect of proper

nutrition was apparent, and the bulls would maintain condition and hold up better through the entire breeding season. We have continued managing our bulls at the same facility ever since (now managed by Craig Uden), and we continue to see the same benefits.

We have since used over 500 of these bulls natural service in our own breeding program, on dry range and in the mountains, and have never had a bull fall out of our program early due to his feeding or testing management. Beckton Julian B571, Lancer F442, Nebula M045, Nebula P707, and all of our other great sires were fed and managed in Cozad. While it is possible to feed bulls improperly under any structure, we would strongly question those who promote the notion of any advantage to "forage-raised" bulls. Every year we see the results and success of our bull management program, and we serve many satisfied customers.

# The Yearling Heifers

Heifer pregnancy  
and loss warranty

**OPTIONAL  
WARRANTY**

See page 2 for  
more details.

## Special Offer

Beckton is offering two straws of P707 semen or any other sire (for which we have adequate supply) to go with every heifer purchased. The buyer will only be responsible for shipping from Billings, MT and semen may be used on any animal the buyer would like.

Beckton females are nearly ideal for today's industry – moderately sized, efficient producers. They combine calving ease, growth, and desirable carcass traits. They are feminine, maternal and quiet, with nice udders and sound feet. All of our heifer calves trailed up with their mothers into the Bighorn Mountains to spend their first summer. They have learned the meaning of mothering ability. And they have the productive capacity to produce the bulls that you see in our sale. The sale heifers are a select group from the top of our replacements.

If you wish, we can also keep any sale heifers through the summer and breed them in natural service to the same herd sires we use with our own replacements. There will be a charge of \$250 per heifer plus delivery at cost in the fall. Visit with Cam about this program.

Sammy Hamilton and her Champion FFA Futurity Heifer donated by Beckton

Boofy the Cow

# Reference Sires

---

The goal for Beckton's program has always been to develop breeding seedstock which offer increased levels of performance for the commercial cattleman. Increased performance does not mean maximizing weight and size, which have already reached the upper limit of economic

value for the packer and consumer. It does, however, mean increasing performance related to calving percentage and weaning percentage; and increasing performance related to cow maintenance requirements and "pounds of calf per acre" efficiency.

## EPD Accuracies and Possible Change

EPDs are predictions, not true values, and we can therefore expect that EPDs will change from sire evaluation, as more information (i.e. progeny data) is included. A possible change value is an estimate of the amount of change (in trait units) that can be expected for a given EPD.

Technically, there is a 68% chance that the real genetic value (an EPD with a accuracy of 1.0) for any trait lies between its EPD plus its possible change value and its EPD minus its possible change value. For example, if a sire has a weaning EPD of +25 lb. and a possible change value of 10 lb., we can expect the true genetic value to be between +15 lb. (25 - 10) and +35 lb. (25 + 10) 68% of the time. We should not be surprised if his EPD in next year's evaluation is as high as +35 or as low as +15. If next year's EPD should happen to be slightly outside of this

range, keep in mind there is nearly a one-in-three chance of that happening; however, significantly larger deviations can occur.

Possible change is simply another way of expressing accuracy of an EPD. High accuracy sires will have small possible changes and vice versa. Many breeders feel that possible change values complement accuracies and help them determine just how thoroughly an animal has been evaluated. The accuracy/possible change chart lists possible changes in EPDs that can be expected with different levels of accuracy for the various traits.

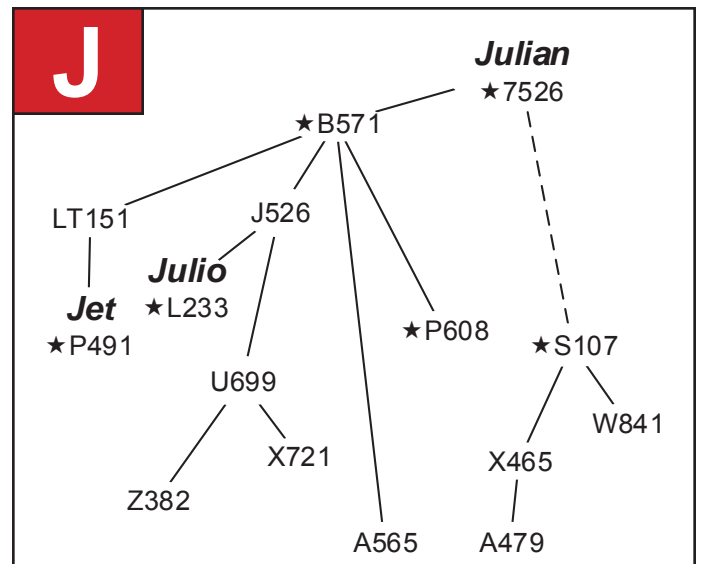

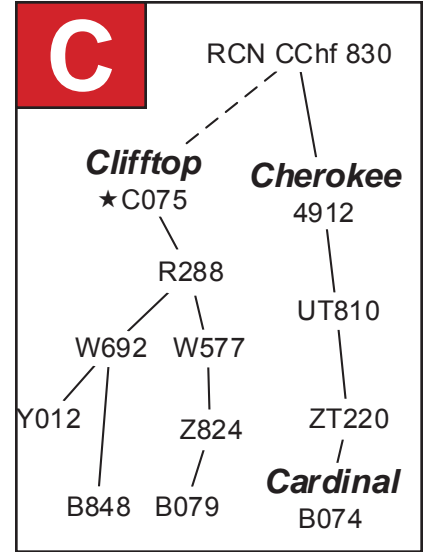

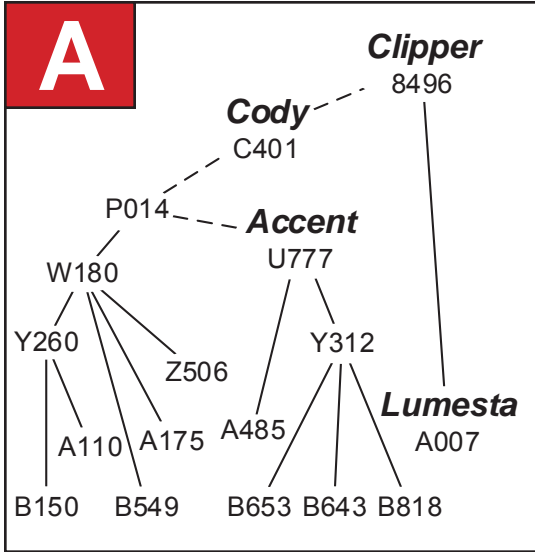

For more information on possible change values, please see the article by Dr. Bob Hough titled "Understanding EPD Accuracies and Possible Change". This article can be downloaded from the Red Angus Association of America website at [www.redangus.org](http://www.redangus.org).

# Sale Terms and Conditions

Except for those stated in the terms and conditions below, there are no warranties, either expressed or implied, as to the merchantability or fitness for a particular purpose with respect to the cattle being sold at this auction. The warranties and guarantees set forth in the "Terms and Conditions" are in lieu of all other warranties, either expressed or implied, and the remedies provided therein shall be the sole and exclusive remedy for the Buyer, or any party claiming through Buyer, for any breach of warranty or guarantee therein provided, and all other obligations or liabilities.

The information in the catalog is believed to be accurate, and the information seller believes to be most representative. It is the nature of seller's business that the seller engages in a continual process of collecting new data and information. Therefore, any information presented at the time of sale is always subject to revision, correction or update.

## I. BIDDING

The Auctioneer in charge will settle any disputes as to bids, and his decision on such matters shall be final.

## II. TERMS

Terms of sale are cash or personal check unless satisfactory credit arrangements have been made with vendor prior to sale.

## III. PURCHASER'S RISK

Each animal becomes the risk of the purchaser as soon as sold, but it shall be the obligation of the Seller to see that animals are fed and cared for free of charge to purchaser, until loaded for shipment or until the expiration of 48 hours after the sale, whichever occurs sooner.

## IV. DELIVERY

For any animals for which seller's arrange delivery, the following terms shall apply. Each animal becomes the risk of the purchaser as soon as sold, and through the time of delivery. The seller will arrange transportation and delivery schedules, and may combine animals from one or more purchasers for convenience and to reduce costs. If delivery is arranged, seller assumes no other liability. Once the purchaser has been notified of the date and approximate time of delivery (morning, afternoon, evening, etc.), it is the responsibility of the purchaser to arrange adequate and agreeable location and facilities for unloading each animal. When unloaded at the agreed upon location, all care and management of the animal is the responsibility of the purchaser.

## V. CERTIFICATE OF REGISTRY

A transferred certificate of registry will be furnished to the purchaser for each animal for which a Registration number is listed.

## VI. HEALTH

All animals are eligible for interstate shipment, except as otherwise announced. Interstate health papers will be furnished for each animal requiring T.B, Bang's, and trich tests in accordance with federal and state regulations.

## VII. DIVISIBILITY

The percentage of ownership interest received by the buyer, whether it is 100% or 2/3 or otherwise as defined in the catalog or by the auctioneer, may not be subsequently divided without the express written consent of the seller.

## VIII. ANNOUNCEMENTS

Any changes from information of any kind in this catalog will be announced from the auction box and such announcements shall take precedence.

## IX. BREEDING GUARANTEE

Any female that has had a calf prior to the date of sale shall be considered a breeder without further guarantee. All females sold as 'bred' or 'pregnant' have been pregnancy checked by a licensed veterinarian and are guaranteed bred on the day of sale. The purchaser may elect to have any female so listed rechecked at their cost within 30 days of delivery by a licensed veterinarian of their choice. Any such female determined open by this recheck may be returned to the seller for a full

refund. Due to conditions out of seller's control, once a female leaves seller's possession, this is the only guarantee offered.

All bulls are sold as guaranteed breeders. Each bull has been officially fertility tested as "Satisfactory Breeder" prior to the sale. However, seller cannot guarantee against physical injury or illness following the sale. But if within 8 months following the sale, the buyer has evidence that the animal is not a breeder, the buyer may obtain a statement signed by a licensed veterinarian to that effect, such statement also indicating that there has been no injury or illness to the animal following the sale, and return the bull to the farm of the seller for adjustment. If the seller cannot then prove the animal to be a breeder, an adjustment will be made by the seller, either by substituting an animal of equal value, or by the refund of the full purchase price. Such adjustment shall be considered full settlement and satisfaction of all claims. No guarantees apply to animals which are shown following the sale.

## X. GENETIC DEFECT AND PARENTAGE GUARANTEE

For complete rules and regulations in regard to genetic defects or parentage guarantee contact the RAAA. Ask for Section C Registration Requirements.

Osteopetrosis: The Red Angus Association along with animal scientists have developed a DNA marker test for osteopetrosis (OS), a genetic disorder which in rare instances can cause the loss of a calf at birth. Since the test was developed, Beckton has tested every sire being used in our breeding program. Only one sire, from outside our program, tested positive as a carrier of the gene. Every sire bred and raised at Beckton has tested 'Free'. All of our major semen sires have also been tested 'Free'. We guarantee every sale animal to be OS Free, and if you have a concern, we will have any sale animal tested on request. If an animal were to test positive, we would replace the animal or refund the purchase price. The testing we have done shows no incidence of occurrence in any Beckton bloodlines for the past 30 years, and so we believe there is no safer herd than ours.

## XI. RETAINED INTEREST AND SEMEN RIGHTS:

Beckton is selling full possession and one half semen interest in all the bulls in the catalog. Seller is retaining one half interest in all bulls in the catalog. This is done so we can use some of the bulls in herd and reserve the right to collect and market semen on these bulls. Any collection on our behalf would be at our expense and could be done during the off-season and at the convenience of the buyer. The buyer would have the option to share in the collection and retain semen for the buyer's use also. If semen is marketed by either party, Seller receives one half royalty interest on gross semen sales, and buyer receives one half interest. Regardless of semen collection and marketing, the buyer retains full possession, full pasture use rights, and full salvage value in these bulls.

## XII. RIGHTS AND OBLIGATIONS

A. The above terms and conditions of sale shall constitute a contract between the Buyer and Seller of each animal and shall be equally binding upon both. Each sale or resale of an animal constitutes a separate transaction.

B. Neither the sale manager, the owner, nor any other person connected with the management of the sale, assumes any liability, legal or otherwise.

# Internet Bidding via Superior Productions

## HOW TO PARTICIPATE AS AN ABSENTEE BUYER

We have made preparations to bid and buy livestock through Superior Productions' "Call or Click-To-Bid" service for those unable to attend in person on sale day. Please note that all of the lots in the sale will also be available for viewing online prior to sale day at [www.superiorlivestock.com](http://www.superiorlivestock.com).

### HERE'S HOW IT WORKS

**Turn in Bids Over the Phone.** This is our traditional method of buying livestock. To get started simply go online to [www.superiorlivestock.com](http://www.superiorlivestock.com) and click on the tab titled "Register for a Buyer Number". Select the registration form for Superior Productions and print the registration form, fill it out and fax it in to Superior Productions at (817) 378-3380 with a signature on it, or scan and email the form to [info@superiorauction.com](mailto:info@superiorauction.com). You can also mail it in to the address provided on the form. Upon receipt of this information Superior will call you with a buyer's number and the bid line phone number that you will use on sale day to place bids over the phone.

**Click-To-Bid.** This is Superior's online bidding platform for cattle buying. Please note that high speed internet is required – this is not for dial-up or satellite internet. Registration is free, but you must become a member of [www.superiorclicktobid.com](http://www.superiorclicktobid.com) to sign up. Becoming a member is easy - just go to the homepage of [www.superiorclicktobid.com](http://www.superiorclicktobid.com) and follow the out-lined steps to get started. Input your information and select a username and password. You will receive an e-mail confirming you are a member. From that point forward you just have to sign in and select the sale you would like to register for and once approved you will receive an e-mail confirming which sale you are now registered for.

\*If you plan to bid by phone through Superior Livestock or 'Click-to-Bid', you must register at [www.superiorlivestock.com](http://www.superiorlivestock.com) prior to bidding.

**Viewing the Auction.** There are 2 places to view the sale broadcast live on the internet: [www.superiorlivestock.com](http://www.superiorlivestock.com) or [www.superiorclicktobid.com](http://www.superiorclicktobid.com). Just go to the home page of either website and select the auction. If you just want to watch the auction on your computer, smartphone or tablet go to [www.superiorlivestock.com](http://www.superiorlivestock.com), but if you want to bid over the computer you must go to [www.superiorclicktobid.com](http://www.superiorclicktobid.com). Remember you can call in to bid on the internet, but you must be a member of [www.superiorclicktobid.com](http://www.superiorclicktobid.com) to "click-to-bid". Your computer must have Flash Media Player installed for this website to view the auction. If you have any questions, please call the Superior Productions office at 800-431-4452.

### FLY TO SHERIDAN

We are pleased to have Key Lime Air providing two scheduled non-stop flights each weekday from Denver via regional jet service. Rental cars are available from Avis at the Sheridan Airport.

## FIRST CLASS

### HERD BUILDER INDEX

The **HERDBUILDER INDEX** developed by the RAAA, and now used throughout the breed, (see pages 8-9) weights EPD's according to their effect on overall herd profitability. The Index scores and ranks all Red Angus sires according to their comparative expected profitability when mated to an average set of cows.

**42 of the 50 highest ranking sires in the Red Angus breed for profitability are Beckton sires or descended from Beckton sires, including 17 of the top 20.**

The 251 Beckton sale bulls inside this catalog have an average Herd Builder Index of 150. The average Index for the Red Angus breed is 104. **Statistically the average Beckton bull produces \$46.00 more profit per mating (150-104) compared to other Red Angus bulls.**

**Mated to 150 females over his service lifetime, the average Beckton bull in this sale should produce about \$7,000 more profit from your cow herd.** Beckton genetics will further increase the value of your replacement females, and your cowherd going into the future.

### HERD STAYABILITY

Beckton is the #1 Herd in the breed for Stayability, and has been for many years. **44 of the top 50 sires in the Red Angus breed for Stayability EPD are Beckton sires or descended from Beckton sires, including 17 of the top 20. These are the bulls and heifers that will produce, breed back, and stay in your herd for many years.**

### INTERNET BIDDING

This year Superior Productions will provide internet and representative bidding services for buyers who can't make it to the sale. Please see page 88 for more information.

**Free Delivery**  
anywhere in the Continental US
