Office: 307.674.6095 • Evenings: 674.8162 • Fax: 672.7281

Dear Friends and Cattlemen,

Welcome to Beckton's 75th Anniversary Sale !! It has been that long since our family started putting together the very first herd of Red Angus cattle, basing our new herd on genetic science and selection. The cattle and genetics have come a long way since then. This year both bulls and heifers have come through a nice winter, and they look really good. We hope you can take advantage of this opportunity to see them.

We refer often to the Herd Builder Index, because it is to date the best indicator of overall commercial cattle profitability put together by the Red Angus Association. All of the economically relevant traits (fertility, growth, carcass, etc.) which go into this Index value are genetically heritable, which means as you keep replacement females from these bulls, you also increase the long-term base profit potential of your cowherd. Ag economists have long known that the traits which most improve ranch profitability are the "maternal" traits like fertility and calving ease, which increase calving percentage and weaning percentage. Weaning percentage has always been more important than weaning weight. Beckton genetics are famous for being maternal genetics. They excel year after year on those measures, and today 43 of the top 50 sires in the breed for Herd Builder traits use Beckton bloodlines.

Something new in our catalog this year is a beef "Tenderness" Score. It is well known from scientific research that the Calpain and Calpastatin enzymes are important to the tenderness and eating quality of beef. Neogen Corp uses DNA technology to measure these enzymes, plus myostatin, in individual animals. Results are provided on a simple 1 to 10 scale, with 10 being the best. The beef industry average is 6.

Since 2007 we have been using this measure in our herd sire selection to build inherent beef tenderness into our herd genetics. The results have been phenomenal. Today the preponderance of our herd sires measure 8, 9, or 10, with the average about 9, compared to an industry average of 6. We are very near the max. We realize this is a trait which will take time to develop in the current commercial feedlot/packer industry. But we believe beef tenderness is an important trait for the overall competitive position of beef in the marketplace. It is a trait we want to develop, produce, and help build into the beef industry.

Tenderness is a trait that will already benefit producers raising grass-fed or "natural" specialty beef for local high-end markets. We have quite a few of these bull customers. For this reason we are including for each sale animal the Igenity Tenderness Score for their sire. A chart below shows how to rank the measure.

We welcome you again to our 75th. Please join us for our complimentary prime rib dinner at the Holiday Inn right after the sale ends. We look forward to seeing you on Tuesday the 14th, and will help you however we can.

Sincerely,

Cam Forbes

Cam and Trish Forbes

Tenderness Scores:

Outstanding	9-10
Very Good	7-8
Average	5-6
Poor	3-4
Very Poor	1-2

1 o'clock pm (Lunch at noon)

237 Bulls • 43 Heifers

Selling in catalog order, heifers sell following the bulls

Some Facts about the Beckton Herd

The Herd Builder Index is the best measure of overall commercial cattle profitability developed by the Red Angus Association, and Beckton has the best overall selection of high Herd Builder bulls in the industry. **An amazing 17 of the top 20 highest ranking sires in the Red Angus breed (and 43 of the top 50) for Herd Builder profitability are Beckton sires or descended from Beckton sires.** Just the average Beckton bull in our sale is in the top 20% of the breed. If you keep your own heifers for replacements, select bulls in the top third or at least the top 50% of the breed.

► **HERD STAYABILITY:** Beckton is the #1 Herd in the breed for Stayability, and has been for many years. **7 of the top 10 sires in the breed for Stayability EPD are Beckton sires or descended from Beckton sires.**

► **EASY CALVING:** The #1 Herd in the breed for easy calving, with the best average Calving Ease EPD of any major herd. **18 of the top 20 sires in the breed for best Calving Ease EPD are Beckton sires or descended from Beckton sires.** If you are breeding heifers, these are your top choice.

► **LOW MAINTENANCE ENERGY:** Beckton has also been the #1 Herd for Low Maintenance Energy requirements for many years, with more of the top 10 sires than any other herd.

► **OTHER IMPORTANT TRAITS:** Fast Gainability to an early market weight; good Disposition; Fertility; Mothering ability and good Udders; Adapted both to short grass range and High Altitudes; very good Marbling and Carcass quality. **Our genetics have been developed over 75 years to thrive in Wyoming without supplemental feed.**

Sale Details

Site-Unseen Purchase

If you are unable to attend the sale, we can help you select the bulls or heifers to fit your needs. Give us a call, letter, fax or email, and we can handle bidding for you according to your directions. Satisfaction is guaranteed on all animals purchased "sight-unseen". Over a quarter of our bulls sell this way, mostly to long-time and repeat customers. To provide adequate time to assist you, please contact us before actual sale day.

Internet Bidding via Superior Productions

Internet bidding and phone bidding are now available with Superior Productions. See more information on page 3.

Conference Call Buying

Conference call bidding will be available with Bill Pelton, Pelton Livestock. See more information on page 3.

Payments

Payments can be made with cash, check payable to Beckton Stock Farm, Inc. or Visa/Mastercard on sale day.

All Bulls "Trich" Tested

In all the years we have been selling and delivering bulls, Beckton has never had a bull test positive for "trich". But because an increasing number of states require testing of yearling bulls, and to avoid any delay in delivery time, we will have all the sale bulls tested negative for "trich" prior to the sale. Customers from any state may also come to the sale with their trailer and load out directly after the sale.

Free Delivery

We provide free delivery for all bulls throughout the continental U.S. If you bring a trailer to haul your own, \$200 will be deducted from the price of each bull. Heifers will be delivered free within 400 miles, and at cost for additional miles. Most of the sale cattle will be delivered from 1 to 3 weeks after the sale, although we will try to accommodate if you need your bulls right away. Although there occasionally are limitations, in most cases we can deliver the cattle directly to your ranch.

Additional Sale Information

- ▶ The animals sell in catalog order. We will have a conference call available for telephone bidding. You must register in advance, and conference number and instructions will be available then.
- ▶ All bulls have passed a rigorous fertility exam that included live semen evaluation, scrotal measurements, and reproductive tract examinations.
- ▶ Beckton has a comprehensive herd-wide health program which includes vaccinations for 7-Way, IBR, BVD, PI3, BRSV, Lepto, and ivermectin. The heifers are also vaccinated for bangs and vibrio.
- ▶ When a genetic test was developed by RAAA for osteopetrosis (OS), Beckton tested every sire in use in our program, as well as our major AI sires. Every Beckton bred sire (nearly 80 in total) tested OS Free.
- ▶ We plan to have semen collected on some of the bulls before the sale. We will also work with the buyer to collect bulls after the sale.
- ▶ Buyer receives full possession and one half semen interest in all the bulls in the catalog. Seller is retaining one half interest in all bulls in the catalog. This is done so we can use some of the bulls in herd and reserve the right to collect and market semen on these bulls. Any collection on our behalf would be at our expense and could be done during the off-season and at the convenience of the buyer. The buyer would have the option to share in the collection and retain semen for the buyer's use also. If semen is marketed by either party, Seller receives one half royalty interest on gross semen sales, and buyer receives one half interest. Regardless of semen collection and marketing, the buyer retains full possession, full pasture use rights, and full salvage value in these bulls.
- ▶ Payments can be made with cash, check payable to Beckton Stock Farm, Inc. or Visa/Mastercard on sale day.

BECKTON BULL AND HEIFER WARRANTY

Optional protection against injury or death, plus Pregnancy coverage for heifers

BULLS: Injury or loss protection coverage - If your bull is permanently injured or dies any time up to 5 months after purchase, you will receive a credit toward purchase of another bull in the amount of the original purchase price minus salvage. The cost is 5% of the purchase price paid at settlement (eg. \$150 for a \$3,000 bull).

HEIFERS: Injury or loss protection plus Pregnancy Guarantee – likewise good for 5 months after purchase. If your heifer fails to become pregnant when exposed to a bull who settles 75% of the other heifers in the same pasture; or in the event your heifer is permanently injured or dies, you will receive a credit toward purchase of another heifer in the amount of the original purchase price minus any salvage. The cost is 10% of the purchase price paid at settlement (eg. \$200 for a \$2,000 heifer).

How to Participate as an Absentee Bidder: 1, 2, or 3

1. Site-Unseen Purchase

If you are unable to attend the sale, we can help you select the bulls or heifers to fit your needs. Give us a call, letter, fax or email, and we can handle bidding for you according to your directions. Satisfaction is guaranteed on all animals purchased "sight-unseen". Over a quarter of our bulls sell this way, mostly to long-time and repeat customers. To provide adequate time to assist you, please contact us before actual sale day.

2. Superior Livestock Productions

Turn in Bids Over the Phone. To get started simply go online to www.superiorlivestock.com and click on the tab titled "Register for a Buyer Number". Select the registration form for Superior Productions and print the registration form, fill it out and fax it in to Superior Productions at (817) 378-3380 with a signature on it, or scan and email the form to info@superiorauction.com. You can also mail it in to the address provided on the form. Upon receipt of this information Superior will call you with a buyer's number and the bid line phone number that you will use on sale day to place bids over the phone. **Important: If you plan to bid by phone through Superior Livestock or 'Click-to-Bid', you must register at www.superiorlivestock.com prior to bidding.**

Click-To-Bid. This is Superior's online bidding platform for cattle buying. Please note that high speed internet is required – this is not for dial-up or satellite internet. Registration is free, but you must become a member of www.superiorclicktobid.com to sign up. Becoming a member is easy - just go to the homepage of www.superiorclicktobid.com and follow the out-lined steps to get started. Input your information and select a username and password. You will receive an e-mail confirming you are a member. From that point forward you just have to sign in and select the sale you would like to register for and once approved you will receive an e-mail confirming which sale you are now registered for.

3. Sale Day Conference Call

Our goal is to have you in the seats but if you can't make it on sale day, we're fixin' to get you "on the line!"

Easy as 1~2~3
Call BILL PELTON in Advance to...

1. Pre-Register for your buyer number
2. Receive the toll-free Call in Number & Pin
3. Get last minute instructions for the call

Pelton Livestock
Marketing & Consulting
www.billpelton.com | 406-671-5100

Buyers purchasing via Superior or Pelton Livestock can mail a check after the sale with brief delivery instructions and an approximate date you would like delivery by. If you would like to pay with a credit card, please call the office the day after the sale

The Beckton Program

Cow Size

The goal for Beckton's program has always been to develop breeding seedstock which offer increased levels of performance for the commercial cattleman. Increased performance does not mean maximizing weight and size, which have already reached the upper limit of economic value for the packer and consumer. It does, however, mean increasing performance related to calving percentage and weaning percentage; and increasing performance related to cow maintenance requirements and "pounds of calf per acre" efficiency.

Size Matters

Beckton cattle are already big enough for the consumer and the packer. Using yearling weight EPD as the best available indicator of market size, the average for our sale bulls is +80, about the same as the Red Angus breed average, so for market size our cattle are directly comparable.

The big difference with Beckton's program is that we select for additional weaning and yearling weight, but with the restriction that we have maintained the same cow size over time. In contrast, the industry has allowed cow size to increase at the same rate as calf size. Cow size is the largest factor determining maintenance requirements. Our goal has been to increase efficiency, not size. No other seedstock breeding program has had such a goal and maintained it for so long.

Beckton Cow Weight Average (lb.)

Year	1978	1986	1994	2002	2010	2018
Weight	1,126	1,064	1,067	1,104	1,068	1,074

(mature lactating cows taken at weaning)

Cow weights vary from year to year depending on grass, weather or other short term factors. But overall our cow size has stayed fairly constant over time.

The Industry Problem

As shown on the graph on the next page, industry-wide cow size has increased substantially, 31% since 1978. Hay use per cow has increased even more, from 1.43 tons per animal to 1.91 tons.

Why does hay use increase at a faster rate than cow size or production per cow? Hay and grain are supplements to the cow's main diet, which is grass, and grass supply is relatively fixed by environment. Each increase in cow feed requirement must be met entirely by supplements, or by a combination of supplement and reduced stocking rate. A small increase in cow feed requirement leads to a reduction in stocking rate or a large increase in higher-cost, supplemental feed needs.

Any gains achieved in the feedlot sector due to increased animal growth, have been overwhelmed by increased cost of production in the cow-calf sector.

The Beckton Crew...

Randy Zier

Alan Sanders

Roger Zier

Shelby MacMillan

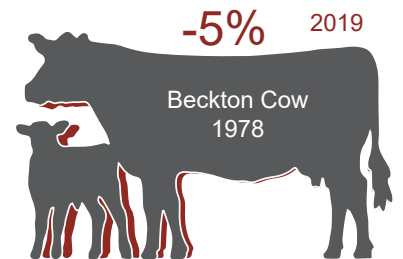

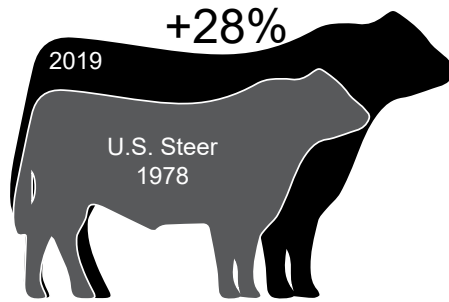

Efficiency

The graphic at right shows how, for the U.S. cattle industry overall, the increase in average calf weights, as measured by steer slaughter weights, has been directly matched by an increase in average cow weights. (Percentages are based on USDA slaughter weight data for steers and cows respectively, using 1978 as a base year. Data for heifers slaughtered shows an identical trend.) Over 40 years, there has been minimal change in overall cowherd efficiency.

This graph shows the failure of cross-breeding and composite breeding to do little more than simply increase general cattle size. In the promotion of composites, the impact of retained heterosis on mature weight is too often ignored. Crossbreeding and composites are sold as a free lunch, but they aren't free.

The graphic shows Beckton cowherd data over the same time period.

1. Beckton cow size has shown no significant change over the past 40 years, while the industry has experienced a substantial increase in cow size.

2. Even without increasing cow size, we have raised the rate of early growth in Beckton cattle, using intense genetic selection and generation turnover.
3. The net change in efficiency as measured simply by "calf weight divided by cow weight" is significantly higher with Beckton's genetic program, compared to mainstream cross-breeding based on retained heterosis.

We have accomplished this by selecting for growth, restricting birth weight and cow size creep, and multiplying each incremental change rapidly throughout our entire cowherd and all of our bloodlines. Usually this has meant working within our own bloodlines rather than introducing out-crosses, because the outside genetics for the direction we wanted to go haven't been available. The overall key to success is simply that we have been making small progress in multiple traits, but doing it consistently over a very long period of time.

Management

One Bull – the Simple Solution is the Best Solution

Many cattlemen use Beckton bulls for their heifers because of their low birth weights and high calving ease. Our bulls are even better when used on cows, because replacement heifers tend to be selected from calves out of older cows. **Keeping replacement heifers sired by Beckton bulls is the quickest way to limit cow size creep and to moderate cow size for the future.** In our own program we use the same bulls on both heifers and cows. Every bull is used his first year with heifers to evaluate calving ease, and used in future years with older cows. We get calving ease, growth, and moderate-sized replacements, all with the same bull.

Quietness and Ease of Handling

The necessity of record keeping means that our cattle will be handled much more than commercial cows. **This benefits our seedstock customers because our cattle will be quieter and easier to handle.** Good disposition is one of our most valued traits.

Selection for Industry Requirements

In order to make selection decisions appropriate to the commercial beef industry, seedstock cattle need to be managed and measured under conditions which will approximate the commercial industry. **Our cows are run entirely on grass, with hay only if weather conditions require it, because that is how the commercial industry runs cows.** However, almost all commercial calves go into feedlots before slaughter, so feedlot performance and efficiency is an important trait for calves. **Simply put, a producer needs to know how his cows perform on grass, and how his calves perform with feed.**

Our bulls are run on a performance test designed to provide the fairest basis of comparison among them, and

this requires a compromise. Our bulls receive a “growing” ration high in roughage and protein and not as high in energy as a steer would receive. **We want to get a good measure of gainability with which to compare bulls, but we don’t want the bulls fat.**

Craig Uden, Darr Feeders Manager
Photo courtesy of the Lexington Clipper-Herald

Mitch Ziebell, Darr Feeders

Mitch Ziebell, Craig Uden of Darr, NE

Since 1979 all of our bulls have been performance tested at a facility owned and managed by the Kugler family near Cozad, Nebraska. In the fall of 2005, Lane Kugler retired and the operation was bought by a neighboring operation – Darr Feeders. The overall operation is managed by Craig Uden, president of the NCBA, with the bulls under the daily management of Mitch Ziebell. **We have been very impressed with the conscientious care with which Mitch oversees all aspects of the bull management.**

Additional Facts about the Beckton Program

- Birth weight**
- ▶ Every sire entering our own program is used first on our own heifers, then on our cows.
 - ▶ We have never used high birth weight sires in any part of our program, so big birth weights are rare.
 - ▶ We get the pay weight, but with lower birth weights and greater calving ease.
 - ▶ Full production from heifers. We use the same bulls on heifers and cows.

- Growth**
- ▶ Weaning efficiency, and rate of gain to slaughter weight second to none.
 - ▶ Growth traits must be consistent with maintaining maternal qualities.
 - ▶ Beckton cattle are ideally sized for today's packer demand.

- Hardiness**
- ▶ Every cow in the herd has spent part of her life in the Big Horn Mountain summer range, at elevations from 7000 to 10,500 feet.
 - ▶ In 2001 we PAP tested all of our herd sires. The herd average PAP score was 32.5 at 4000', equivalent to a herd average PAP of 39 at 8000' (excellent scores).
 - ▶ By the time she is 5, our average cow will have been trailed over 80 miles, above and beyond normal pasture rotation.

- Efficiency**
- ▶ The typical dam of our bulls weans over 50% of her body weight in 205 days, under range conditions, with no creep-feeding.
 - ▶ The average dam produces over 100% of her own body weight in a year.
 - ▶ The average mature cow (age 5+) weighs about 1100-1125 pounds.

- Fertility**
- ▶ Every bull in our program is used in natural service, with 30-50 heifers/cows.
 - ▶ Every cow in our program must cycle naturally and breed early under range conditions.

- Value**
- ▶ Beckton Red Angus produce more growth without high birth weights.
 - ▶ They are the one-bull solution that can be used on both heifers and cows.
 - ▶ Carcass quality is an extra benefit.

- Reliability**
- ▶ Beckton has been genetically improving Red Angus since 1945, a 30-60 year lead time over other producers.
 - ▶ It is a complete, genetically sound breeding program, which demands whole-herd performance.

1960s Beckton Sale with Berdon's broadcast van.

*Beckton Larkabeau O "220" in 1959 -
the 1st Red Angus Bull at ABS*

Mrs. Waldo (Sal) Forbes was honored as the first woman inducted into the Saddle and Sirloin Club's portrait gallery in Louisville, KY.

Using New Selection Tools

HerdBuilder and GridMaster Indices

The new Red Angus Association HERDBuilder and GRIDMaster Indices are given for each sale animal, in the box just above the EPDs. The Index number is followed by the “Percentile” showing how that animal ranks compared to all other Red Angus bulls or heifers. A higher Index number results in a lower “Percentile” number, which means a higher ranking within the breed, and is therefore better. The development of these Indices by the RAAA is described in the article written by Larry Keenan and reprinted.

The familiar Birth Weight or Yearling Weight EPDs, for example, are measured in pounds of increase in weight, whereas these Indices are measured in ‘dollars of increase in profitability’ - the expected increase in profit that each animal is expected to generate per mating of that animal. A bull with a HerdBuilder Index of 160, compared to a second bull with an index of 110, should produce $160 - 110 = 50$ dollars of expected increased profit for each cow to which he is mated, compared to the second bull (note that this is ‘per mating’, not ‘per calf produced’). The Index considers and weights all economic factors – fertility, calving ease, maintenance costs, growth rate, stayability, carcass quality, etc. - according to best available science,

You will find Beckton bulls individually and as a group ranking in the top of the breed for profitability, as measured by these new Indices.

Maintenance EPD

This EPD predicts the relative feed energy requirement for maintenance, for cows produced by a sire or female. A bull with an ME of -3 (minus 3) is expected to sire replacement daughters which will need 10 fewer mcals of energy per month than a bull with an ME of +7.

We believe this is an important EPD because feed costs, both direct and indirect through ranch overhead, make up by far the largest proportion of operating costs. It can have much more direct impact on ranch profitability than Marbling or Ribeye EPD for example.

The Beckton herd has been one of the breed’s top herd for low maintenance energy requirements for many years.

Calving Ease

The Red Angus Calving Ease EPD was introduced in 2003, and is a more direct measure of calving ease than birth weight alone. Calving Ease is defined as follows: “The expected differences of calving ease measured as the probability difference (between sires) of unassisted calvings among offspring.” For Calving Ease EPD, the higher number is better.

There are two Calving Ease EPD’s - “Direct”, a predictor of an animal’s own offspring; and “Maternal”, a predictor of a daughters calving ease. Unless stated otherwise, we publish the Calving Ease Direct because most of our customers’ primary concern is selecting bulls for use on first calf heifers.

Beckton’s average Calving Ease EPD is +12, a full eight points higher than the the Red Angus breed average of 4, due to our long history of selection for moderate birth weights. **The average Beckton bull is in the top 4% of the entire breed for highest Calving Ease.**

Cow Efficiency

We present two indicators of efficiency. The first is Weaning Percent, a simple percentage of calf 205 day weight divided by the dam’s actual weight at weaning. The second is PRI Cow Efficiency. This also measures calf weaning weight, but relative to the cow’s metabolic weight, and is expressed as an index above or below 100.

These efficiency measures are best used as indicators of where an animal is relative to others, rather than directly for selection. For example, if we see an animal with a low efficiency, we would look at the actual calf and cow weights to decide if the calf is too small, or the cow too big for the environment. That in turn will suggest corrective actions. In general, select for the traits you need to change to make cattle more efficient, and efficiency will be the result.

Beckton has been performance tested selection since 1945, and we believe our cattle today are the most efficient in the industry.

Dam Information

A major difference with our catalog is the greater amount of information about the dams we provide. Weaning percent and Cow Efficiency are explained above. In addition, with each sale animal we give the dam’s age when this calf was born, and the dam’s actual weight when the calf was weaned the previous fall. We also provide her progeny averages – the average birth weight, weaning ratio, and yearling ratio – of her calves.

The Bulls

Our bulls are managed in a manner to gain important performance data and information, and equally importantly, to develop and provide our customers with many years of productive service. We have been testing breeding bulls over 50 years, longer than almost any other producer. Our own breeding is based primarily on natural service, not AI, so we see how our bulls work in the pasture. We use bulls raised and managed just this way, with our own cows and heifers, on every kind of terrain, and high in the Bighorn Mountains.

For the first twenty years our bulls were tested at home here in Wyoming. They received some grain, but otherwise grass pasture and dry hay. In 1979 we moved our test to a facility managed by the Kugler family in Cozad, Nebraska, where the bulls got a ration including silage, corn and protein. When we brought our first bulls home from Kuglers' and used them with

our own cowherd, we discovered a dramatic increase in libido and breeding performance. The effect of proper nutrition was apparent, and the bulls would maintain condition and hold up better through the entire breeding season. We have continued managing our bulls at the same facility ever since (now managed by Craig Uden), and we continue to see the same benefits.

We have since used over 500 of these bulls natural service in our own breeding program, on dry range and in the mountains, and have never had a bull fall out of our program early due to his feeding or testing management. Beckton Julian B571, Lancer F442, Nebula M045, Nebula P707, and all of our other great sires were fed and managed in Cozad. Every year we see the results and success of our bull management program, and we serve many satisfied customers.

Lot 237

The Yearling Heifers

Beckton females are nearly ideal for today's industry – moderately sized, efficient producers. They combine calving ease, growth, and desirable carcass traits. They are feminine, maternal and quiet, with nice udders and sound feet. All of our heifer calves trailed up with their mothers into the Bighorn Mountains to spend their first summer. They have learned the meaning of mothering ability. And they have the productive capacity to produce

the bulls that you see in our sale. The sale heifers are a select group from the top of our replacements.

If you wish, we can also keep any sale heifers through the summer and breed them in natural service to the same herd sires we use with our own replacements. There will be a charge of \$250 per heifer plus delivery at cost in the fall. Visit with Cam about this program.

Beckton is offering two straws of P707 semen or any other sire (for which we have adequate supply) to go with every heifer purchased. The buyer will only be responsible for shipping from Billings, MT and semen may be used on any animal the buyer would like.

Reference Sires

The goal for Beckton's program has always been to develop breeding seedstock which offer increased levels of performance for the commercial cattleman. Increased performance does not mean maximizing weight and size, which have already reached the upper limit of economic

value for the packer and consumer. It does, however, mean increasing performance related to calving percentage and weaning percentage; and increasing performance related to cow maintenance requirements and "pounds of calf per acre" efficiency.

Sale Terms and Conditions

Except for those stated in the terms and conditions below, there are no warranties, either expressed or implied, as to the merchantability or fitness for a particular purpose with respect to the cattle being sold at this auction. The warranties and guarantees set forth in the "Terms and Conditions" are in lieu of all other warranties, either expressed or implied, and the remedies provided therein shall be the sole and exclusive remedy for the Buyer, or any party claiming through Buyer, for any breach of warranty or guarantee therein provided, and all other obligations or liabilities.

The information in the catalog is believed to be accurate, and the information seller believes to be most representative. It is the nature of seller's business that the seller engages in a continual process of collecting new data and information. Therefore, any information presented at the time of sale is always subject to revision, correction or update.

I. BIDDING

The Auctioneer in charge will settle any disputes as to bids, and his decision on such matters shall be final.

II. TERMS

Terms of sale are cash or personal check unless satisfactory credit arrangements have been made with vendor prior to sale.

III. PURCHASER'S RISK

Each animal becomes the risk of the purchaser as soon as sold, but it shall be the obligation of the Seller to see that animals are fed and cared for free of charge to purchaser, until loaded for shipment or until the expiration of 48 hours after the sale, whichever occurs sooner.

IV. DELIVERY

For any animals for which seller's arrange delivery, the following terms shall apply. Each animal becomes the risk of the purchaser as soon as sold, and through the time of delivery. The seller will arrange transportation and delivery schedules, and may combine animals from one or more purchasers for convenience and to reduce costs. If delivery is arranged, seller assumes no other liability. Once the purchaser has been notified of the date and approximate time of delivery (morning, afternoon, evening, etc.), it is the responsibility of the purchaser to arrange adequate and agreeable location and facilities for unloading each animal. When unloaded at the agreed upon location, all care and management of the animal is the responsibility of the purchaser.

V. CERTIFICATE OF REGISTRY

A transferred certificate of registry will be furnished to the purchaser for each animal for which a Registration number is listed.

VI. HEALTH

All animals are eligible for interstate shipment, except as otherwise announced. Interstate health papers will be furnished for each animal requiring T.B, Bang's, and trich tests in accordance with federal and state regulations.

VII. DIVISIBILITY

The percentage of ownership interest received by the buyer, whether it is 100% or 2/3 or otherwise as defined in the catalog or by the auctioneer, may not be subsequently divided without the express written consent of the seller.

VIII. ANNOUNCEMENTS

Any changes from information of any kind in this catalog will be announced from the auction box and such announcements shall take precedence.

IX. BREEDING GUARANTEE

Any female that has had a calf prior to the date of sale shall be considered a breeder without further guarantee. All females sold as 'bred' or 'pregnant' have been pregnancy checked by a licensed veterinarian and are guaranteed bred on the day of sale. The purchaser may elect to have any female so listed rechecked at their cost within 30 days of delivery by a licensed veterinarian of their choice. Any such female determined open by this recheck may be returned to the seller for a full refund. Due to conditions out of seller's control, once a female leaves seller's possession, this is the only guarantee offered.

All bulls are sold as guaranteed breeders. Each bull has been officially fertility tested as "Satisfactory Breeder" prior to the sale. However, seller cannot guarantee against physical injury or illness following the sale. But if within 8 months following the sale, the buyer has evidence that the animal is not a breeder, the buyer may obtain a statement signed by a licensed veterinarian to that effect, such statement also indicating that there has been no injury or illness to the animal following the sale, and return the bull to the farm of the seller for adjustment. If the seller cannot then prove the animal to be a breeder, an adjustment will be made by the seller, either by substituting an animal of equal value, or by the refund of the full purchase price. Such adjustment shall be considered full settlement and satisfaction of all claims. No guarantees apply to animals which are shown following the sale.

X. GENETIC DEFECT GUARANTEE AND PARENTAGE

All parentage and pedigrees presented in the catalog are believed accurate based upon the breeding and DNA information we have available. However, parentage and pedigree information cannot be guaranteed 100%, because it is always possible that new information or new DNA technology and testing might show that there have been inadvertent errors.

Osteopetrosis: The Red Angus Association along with animal scientists have developed a DNA marker test for osteopetrosis (OS), a genetic disorder which in rare instances can cause the loss of a calf at birth. Since the test was developed, Beckton has tested every sire being used in our breeding program. Only one sire, from outside our program, tested positive as a carrier of the gene. Every sire bred and raised at Beckton has tested 'Free'. All of our major semen sires have also been tested 'Free'. We guarantee every sale animal to be OS Free, and if you have a concern, we will have any sale animal tested on request. If an animal were to test positive, we would replace the animal or refund the purchase price. The testing we have done shows no incidence of occurrence in any Beckton bloodlines for the past 30 years, and so we believe there is no safer herd than ours.

XI. RETAINED INTEREST AND SEMEN RIGHTS:

Beckton is selling full possession and one half semen interest in all the bulls in the catalog. Seller is retaining one half interest in all bulls in the catalog. This is done so we can use some of the bulls in herd and reserve the right to collect and market semen on these bulls. Any collection on our behalf would be at our expense and could be done during the off-season and at the convenience of the buyer. The buyer would have the option to share in the collection and retain semen for the buyer's use also. If semen is marketed by either party, Seller receives one half royalty interest on gross semen sales, and buyer receives one half interest. Regardless of semen collection and marketing, the buyer retains full possession, full pasture use rights, and full salvage value in these bulls.

XII. RIGHTS AND OBLIGATIONS

A. The above terms and conditions of sale shall constitute a contract between the Buyer and Seller of each animal and shall be equally binding upon both. Each sale or resale of an animal constitutes a separate transaction.

B. Neither the sale manager, the owner, nor any other person connected with the management of the sale, assumes any liability, legal or otherwise.

EPD Accuracies and Possible Change

EPDs are predictions, not true values, and we can therefore expect that EPDs will change from sire evaluation, as more information (i.e. progeny data) is included. A possible change value is an estimate of the amount of change (in trait units) that can be expected for a given EPD.

Technically, there is a 68% chance that the real genetic value (an EPD with a accuracy of 1.0) for any trait lies between its EPD plus its possible change value and its EPD minus its possible change value. For example, if a sire has a weaning EPD of +25 lb. and a possible change value of 10 lb., we can expect the true genetic value to be between +15 lb. (25 - 10) and +35 lb. (25 + 10) 68% of the time. We should not be surprised if his EPD in next year's evaluation is as high as +35 or as low as +15. If next year's EPD should happen to be slightly outside of this

range, keep in mind there is nearly a one-in-three chance of that happening; however, significantly larger deviations can occur.

Possible change is simply another way of expressing accuracy of an EPD. High accuracy sires will have small possible changes and vice versa. Many breeders feel that possible change values complement accuracies and help them determine just how thoroughly an animal has been evaluated. The accuracy/possible change chart lists possible changes in EPDs that can be expected with different levels of accuracy for the various traits.

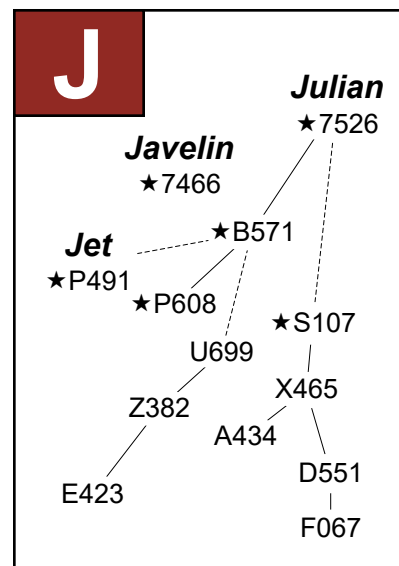

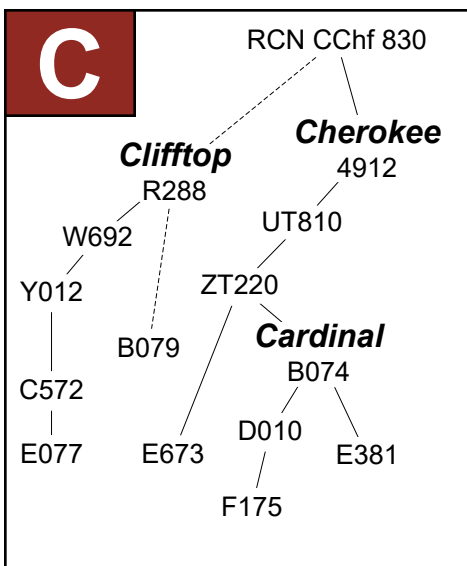

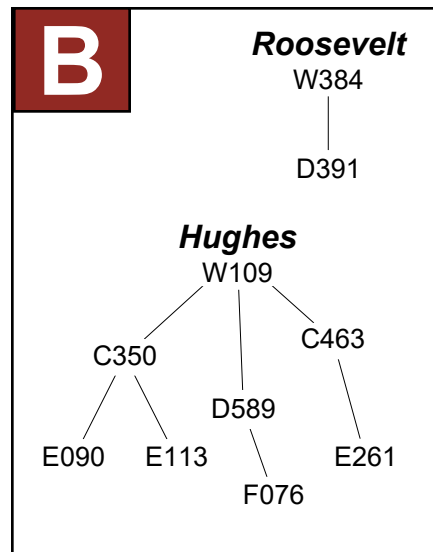

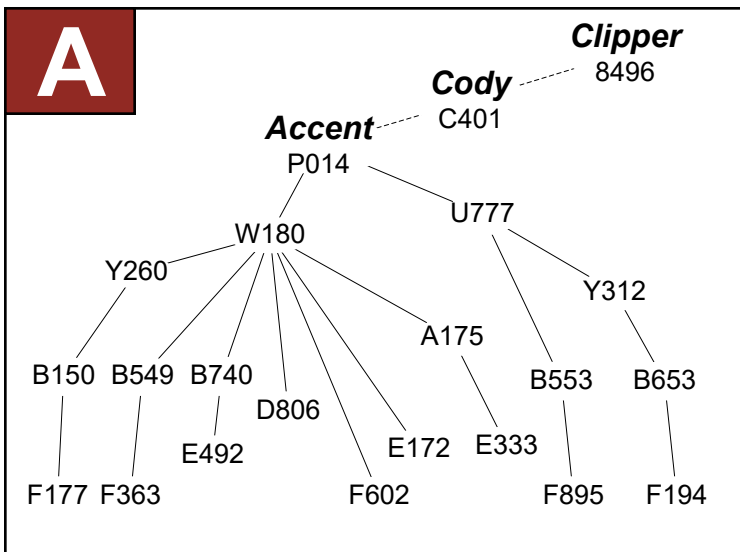

For more information on possible change values, please see the article by Dr. Bob Hough titled "Understanding EPD Accuracies and Possible Change". This article can be downloaded from the Red Angus Association of America website at www.redangus.org.

FIRST CLASS

Lot 237. Great bulls – right to the end !!

Bulls to Build a Herd and more!!!

17 of the top 20 highest ranking sires in the Red Angus breed (and 43 of the top 50) for Herd Builder profitability are Beckton sires or descended from Beckton sires. Just the average Beckton bull in our sale is in the top 20% of the breed.

HERD STAYABILITY – Beckton is the #1 Herd in the breed for Stayability, and has been for many years. **7 of the top 10 sires in the breed for Stayability EPD are Beckton sires or descended from Beckton sires.**

LOW MAINTENANCE ENERGY – Beckton has also been the #1 Herd for Low Maintenance Energy requirements for many years, with more of the top 10 sires than any other herd.

EASY CALVING – The #1 Herd in the breed for easy calving, with the best average Calving Ease EPD of any major herd. **18 of the top 20 sires in the breed for best Calving Ease EPD are Beckton sires or descended from Beckton sires.** If you are breeding heifers, these are your top choice.

GROWTH RATE from Birth to Market – Here is the best volume of bulls combining this high calving ease with high growth rate to early market weight, together with fertility, good feet and udders, range and altitude adaptability, and good disposition.

These are the bulls and heifers that will build you the best possible cow herd, with cows that will stay in your herd for many years.

Superior Productions will provide internet and representative bidding services for buyers who can't make it to the sale. Please see page 3 for more information.
